5222. Scanners, Pawnshops and Vancouver BC

Newsgroup: rec.radio.scanner

Greetings:

Looking for advise on wear to find cheap scanners in Vancouver. I know that the police and their Ericson EDACS system is digital and hence can't be listened, to but when I had borrowed my friends scanner I enjoyed listening to other radio users. Plus my home town police are still using an analog system. I'm wondering what Pawnshops are the best to go and get the good deals at. I've read in previous posts that many don't even have scanners any more as they won't accept any new ones. Any ideas or suggestions would be helpfull.

This is the Pro-95. I ti s very similar to the Pro-92 before it except it has 1000 channels instead of 500, the Pro-95 has no PL/DPL capabilities and no LTR tracking.

It is not a bad radio, especially for $150. It does do EDACS and Motorola trunking, as well as allowing text tags. It appears pretty sensitive on VHF and UHF, I have not yet tried the 800 band yet. I don't have any local Low band stuff so I can't speak to that.

I bought one this morning and spent a few minutes palying with it. As with the Pro-92 it does require a little bit more programming work than scanners such as the BC245 or even older RS scanners, but once you "get it" it is pretty easy. I am just more used to the Pro-43 and BC245 methods, so the programming on the Pro-92 and Pro-95 is a bit awkward to me.

I like the fact that one can use AA cells and that you can charge Nicads within the radio. I can never understand why Uniden doesn't do this.

I have really enjoyed mine, and with a copy of win95 and a cable you can make yourself or purchase one from blackbag software you can up and download freqs and labels.

The latest version of win95 allows you to enter freqs not available from the keyboard. I have entered the military freqs for the local base (Beaufort Marine Corp air Station) and even with the reduced sensitivity, because of the internal filters, it is usable.

All in all the best deal on the market today! Your opinion may vary...

Yeah... just make sure you pay for the darned thing with a credit card. If you pay with check or even cash, and it is over $100 you have to wait for Rat Shack to send you a check. Thats even if you paid for the damned thing with cash!!!!! I can understand the issue if you paid for it with a check, but if you paid for it with cash.... they should return your cash as fast as they demanded it when you purchased it in the first place....

5233. Computer control options

Newsgroup: rec.radio.scanner
Date: 2002-11-26 06:35:07 UTC
From: jkm93ska@temp.seanh.net
Message-ID: <f49c48db.0211252235.5026bf18@posting.google.com>
Source record: 41221

I've had several scanners over the years, but I've never played with computer control (and I don't have any scanners that support it). I have a project in mind, but I'm not completely clear on the options available and which models do what. I'm wondering if what I want to do is even practical on any current models. The vast majority of the information I've found has been geared toward people who just want to hook a scanner up to their Windows computer, run some third-party application and go. That doesn't fit my needs.

What I'd like, if it exists, is a computer-controllable trunking scanner that interfaces with the computer in a "standard" way (that is, serial, USB, firewire, etc.). Nothing that requires another card in the computer is acceptable for my purposes. I need something that I can write custom software to control. So ideally the interface would be documented, but I'm not holding my breath on that. As long as it's not too bizarre, I'm willing to work at figuring it out. But it's critical that I be able to hook this up to any kind of computer and control it only with software I've written -- no proprietary Windows apps or PCI cards or anything required. The type of control I want could be called "partial control:" I want the scanner to do the trunking, etc. on its own (so my software doesn't have to worry about it). All I want the computer to be able to do is to perform basic functions that you'd do from the keypad. Things like scan/hold, manually select banks of channels or specific talkgroups, etc. Getting data back from the scanner about what frequencies, talkgroups, etc. it's on would be great, but I don't see it as necessary for me.

So, am I out of my mind? Is this possible with the type of computer control options available on any current scanner models? If so, any recommendations of models to look at?

Thanks.

sean

That's precisely what you need to do. I know it sucks, but it's GRE's
way of doing things. With a Uniden scanner, you can lockout IDs while
in ID search mode. This is a whole lot easier. Maybe GRE will get
this straightened out in the future... but I'm not holding my breath.

Free software is available for the PRO-95. It is very good, and even enables coverage of some other bands not originally included (like the MilAir band). The only real drawback is that this model does not support WFM receive, so, even though you can enable FM broadcast and TV bands, the reception is distorted since it is NFM only. Even so, this scanner is a great buy at $149 if you need a trunktracking scanner. 1000 memories and long alpha tags are a real plus.

Anyone know if the new Uniden Digital Scanners will work in S.E. Michigan.
More specifically the Metro Detroit Downriver area. I heard that they may
not work with the State police but haven't heard about the local branches.
Thanks,
Tom

5246. Sony Air Band AIR-8

Source record: 41235

I am in search of any information,that you long time radio enthusist may have on the SONY AIR BAND model AIR-8.This portable receiver covers PSB/AIR/FM/AM and is digtal the 4 bands frequency coverage is PSB- 144-174 mhz AIR 108-137 mhz FM 76-108 mhz AM 150-2194mhz(LW/MW/SW) It seems to be a neat radio,a little larger and heavier than a pocket scanner.I haven't figured out exactly how to program it or work all the tricks to it.I do know that it works,and receives.I pick this radio up at a pawn shop for $10.00 and figured it would be something to play around with.
The main information I would like to obtain is,is programming information,and if maybe there is any type of modifcation that may be done to this radio,and also how to find a battery pack for it,the one it has won't hold a charge,and the local radio shack doesn't have a clue about it.Maybe someone has a link to Sony for information on radios of this kind,I can't seem to find nothing on-line for Sony except tv's and stereo's.
Thanks in advance for any information you can give me...73's Lamar

Keith <nospam@attbi.com> wrote:

> Check out the winradio line of products. There is support for
> Linux, Microsoft and MAC OS.

If it specifically supports those three OSes, that would imply that it requires proprietary software, which won't work for me. If the API is easy enough that I can figure it out and make my own software for other operating systems, that would be acceptable. So I'm not looking for something that "supports OS A, OS B, OS C and OS D." I'm looking for something that "supports control over a serial or USB connection." It shouldn't matter if I plug it into a Mac, a Windows box, a Solaris machine, a FreeBSD machine, a NeXTSTEP machine etc.

Also, I was under the impression that with the WinRadio products, the software does *all* of the work -- it does the scanning, trunk tracking, programming, etc. I definitely do not want that. If I'm going to buy a scanner for this, it's going to need to have enough brains "in the box" to do all of the normal stuff. The computer control I want to do is really only equivalent to an extension of the front panel keyboard; it's not a replacement for the in-scanner functions.

Thanks.

So I just spent an hour going over past posts of this group. Isn't the real reason that most of you bought scanners was to listen in on cell and 900 mgh calls? They can be very interesting especially the x rated ones. Now that everything is going digital this part of scanning is drying up quickly. There will be no digital scanners that pick up digital scanners so quit trying to ask about them in a roundabout way like can I get this or that crystal or dual trunk or antenna or whatever. All that is left is listening to fire and police and military and blah blah blah. Does anybody really listen to this boring crap. It is about as interesting as listening to a bus driver call out the stops on his route. Sorry if this offended anyone but I just had to vent.

Well,siclmn(whatever that may stand for) to most,and I believe I can say most,this is a hobby,and one in which,you can do from the house most of the time and just about everyday when you come home from work.It can be a challenge to see what kind of signals you can receive,whether it is police ,fire or even to some cell coverage.The building of the station can be some what of fun,maybe just building antennas for the particular band from something as little as a roll of copper wire,or maybe it's the taking of an old radio,that doesn't work,and bringing life back to it,and to some,it is the tech.part of developing the modifacation for the radio,and making it receive frequencies it's not to be able to receive for the thrill of being able to do it and get away with it,kinda like a teenager trying to buy beer and getting away with it or street racing,it's a thrill.You know some people may ask,why does anyone want to go wade through water and mud to go shoot a duck,well it's those peoples hobby and they enjoy it,to each there own.You know,humans a curious by nature,and want to know what is going on all around them,and what better way than to moniter a scanning receiver.Myself,I not only enjoy scanners,but I also enjoy shortwave radio,and I am also a Amateur Radio operator,so there are several interest to the LISTENING WORLD and,you may be surprized what you can stumble across.
Just my point of view and that's the way I see it from here....Lamar

As long as you recognize that you're venting, enjoy.

Hobbies don't need to be "interesting" to be popular. Stamp collecting is not my idea of interesting, yet many people spend untold hours and unbelievable amounts of money pursuing rare stamps from around the world.

Likewise, you may not think listening to police and fire radio traffic is interesting, but then I guess you may not care all that much about police and fire activities in your area. Fair enough.

As for me, I used to listen to cell phone conversations back when it was legal. It wasn't nearly as fun as listening to one of the city dog catchers pick up a dead dog and request assistance because it wouldn't fit in his truck. The fun began when the assistant arrived on the scene and they had to cut the carcass in two to because he didn't have enough room either. You had to hear the traffic on the air; it was quite hilarious. It included a blow by blow description of who used what tools, and who got dirty.

Yes, I monitor local airport Unicoms. There is no shortage of entertainment on a beautiful fall afternoon as tired pilots are busy trying to make their way to the runway in very crowded conditions.

I also monitor the Low band channels we use at work. Our watershed security staff are not what I would call the best and brightest.

That's just a sample of the many things I listen to. Is it boring? Well, I suppose to others it is. But every once in a while, you hear something interesting or amusing. And that's the only reason anyone listens to a radio.

Oh my my my.

What fun I could have there with my hi-8 and my BC245.

Think I'll stop at WCBS in NY and pick me up a hat or two - so's I can look official-like. Then I'll watch and wait.

Think of it - big mean municipal gubmint takes on the little guy who's only crime was to take pictures. Get them on tape pushing me back and cussing me out - gawd I could sell that tape to inside edition in a New York (or in this case New Jersey) minute.

They could even air footage of me cashing the 5 figure check, while I smile at the camera and tell Deptford city hall "thanks for passing that law...."

Oh yeah then we'd have daily media coverage of the civil suit - what glee it would be to watch the good lieutenant deal with dozens of SAT trucks parked on Main street. Ho ho ho, merry christmas.

The Michigan State Astro system uses the 9600 baud data channel so the
upcoming BC785 and BC250 will not TRACK them. These radios will however
allow you to listen to the audio of the systems in conventional mode as
long as you have the optional digital card installed.

There are other Astro systems in the area but I do not know if they use
the older 3600 baud data channel or not. If they do use the 3600 baud
data channel then the new radios will track them as well as hear the
audio. If they use 9600 then you again can only listen to them in
conventional (non-trunked) mode.

No. I bought a scanner because I am interested in many different aspects of the radio hobby. I am also a police dispatcher and listen to police/fire/ambulance calls.

> so quit trying to ask about them in a roundabout way
> like can I get this or that crystal

I don't believe there are any crystal-controlled scanners out there that will receive cell phone calls. This statement by you shows that you have only a rudimentary understanding of the scanner hobby. My suggestion is to lurk for a while before posting.

I still don't understand how a radio can be programed with frequencies that
they aren't capable of recieving.

To my knowledge Military Air Band is between the frequency range of 225mhz
to 400mhz. The Pro-95 does not cover these frequencies so how could it be
programmed to do so?

Can't speak for every digital system in the SE Michigan area Tom, but i'm certain that the Downriver and Western Wayne systems are still 3600 baud. There is talk that they could both change to 9600 baud in the future, but it won't be for a long time.

Don't know about you, but i'm going to wait and see if Uniden will come to their senses and manufacture a complete scanner. It would make a pretty expensive bookend at $650 bills !!!

Talk's cheap! Anonymous types typically work their mouth and little else.
I'm anxious to see what happens ... assuming, of course, you intend to follow
through and you're not just blowing smoke. We'll know which it is because IF you
do as promised (above) you'll be giving us all the details right here, correct?
I'll be especially interested in your representing yourself in court. That
should be REAL fascinating. Good luck.

It depends upon what band you want to receive. RS has an external 3 dipole antenna that covers most of the normal ranges. If you scan the posts, there are a lot of antenna solutions out there.

Hello,
I am a bit confused with the release date of the Uniden BC250D.
I have heard that it will be shipping in December, while the 785 will ship
in January. I have also heard that both will ship in January.
Can anyone confirm this?
TIA,
Dan

I guess RS lied. Or they didn't know what they had. But, the radio
apparently IS capable of receiving these frequencies. The ability to
program them from the keyboard was apparently left out.

I can understand how external software can force the radio into a
frequency which the keyboard input won't allow. However the problem
which the software can NOT resolve is the that the chocks, traps and
internal amps are not tuned to receive 225-400 therefore in order for
you to receive an actual plane the plane would have to be very close to

give you enough signal to overcome the "untuned" circuits..... Now a scanner built for 225-400 can receive planes over 200 miles away, my record that I could confirm was almost 300 miles (US Thunderbirds flying back to Nellis after the 2001 Daytona Beach airshow).

Which is an EXCELLENT antenna if I may be so bold as to say so. I've used it in the past because it was an inexpensive solution and it more than outperformed my expectations. I was picking up airport ground transmissions that were 30 miles away and behind a mountain. Performance on VHF-LO and 800 MHz bands was excellent as well.

YMMV

5281. Antenna -- indoor or outdoor?

Newsgroup: rec.radio.scanner
Date: 2002-11-27 07:30:15 UTC
From: bolt thrower <tucansam@whodis.org>
Message-ID: <as1sa7$589$1@reader1.panix.com>
Source record: 41271

In my condo complex there is a "no external antenna" policy. So I have two choices for my scanner antenna.

I can take a length of 1/2" PVC, paint it the same color as the trim on my building, run some coax into it, and strip off a length based on the freq range I want to scan. I would then fasten the painted PVC to the outside wall of my condo, against the trim, so it would blend in. I could get it about 12' off the ground this way but it would be bolted to a stucco wall.

Or... I could buy a fancy dipole and hang it in my store room. This is a stucco covered, wooden-framed, sheetrocked room. The antenna would be a max of 8-9' off the ground.

So which would be better for "general" scanner use (ie something that will be good for all the freqs my scanner(s) get) -- a home brew outdoor bolted to a wall, or a professional retail job hung in a store room?

Thanks.

In my area there are a couple of stores which get the leftover clearance items from other parts of the country and then have special sales. I think this may be part of a new policy at RS to help keep inventory up to date. This would eliminate the possibility of easily finding leftover clearance items on a local level as was the case.

Check out http://parnass.com
for scanner software written in Tcl/Tk.

They should work with little or no changes required on
your Solaris system.

Some of the applications at http://radio.linux.org.au
may be suitable, too.

Well,
Got my new scanner from Universal yesterday, nice to get it but I think they are a little messed up on their service.
I order all this stuff on line put in my billing address and my shipping address then they call the credit card company and ask about my account so VISA cuts my account off until I can call them and tell them it's OK about Universal.
I order the radio and software but they didn't offer me a cable to hook them together, they didn't call me to ask if I wanted a cable and they didn't give me a cable. So I have a radio I can't hook anything to until I can find a cable.
Anyway, I got lots of reading to do before it is going to say anything. I'll get the book and the big chair and start reading.

Hi,

I recently purchased an RS Pro-95 and noticed that in Manual Mode -- the unit automatically turns itself off after about five seconds of sitting on a frequency. I thought this might be some sort of battery save feature, but it does not power up again when the frequency becomes active. Any ideas? Is this a defect or something I missed during my quick read of the owner's manual.

Thanks,
Chris

Well, there's lots of folks in here with computers and some of us even have scanners, and I'd bet more than just you and Nick have used the same product. Perhaps your solution lies in whom you ask.

I might even be inclined to assist if I knew what the problem was. But I don't - lucky for me.

Does anybody use a handheld scanner in this band.
Is it worth paying $$ to upgrage my scanner to scan to 3Ghz. Whats up there.
I live in Ireland so I dont think we have any trunk systems etc..

Also the latest scanner does HF.
Is the signal quality good in HF I mostly listen to AIR and Mil
transmissions on a radio shack dx 398

Kevin.

You know what? Maybe I am and maybe I'm not Dan. You'll never really know, since I'm so anonymous and mysterious.... exclamation point.

Has it ever occurred to you that I might actually have a perspective on the situation that only experience can provide? I spent the better part of 2001 as a freelance photojournalist, roaming the southwestern desert with scanners blazing and a Betacam SP at the ready. I regularly pulled in $400+ weekly working 3 or 4 nights a week for 6 hours a night or less. Sounds good huh? So how come I don't do it anymore? I'll share that with you too Dan, since you're so curious to know:

When you do that you see things that don't make the news Dan - things that would give the average person nightmares. I've been spit on, shot at, threatened with arrest, and even watched a man ventilate his own head with a 9mm beretta from about 100ft away (I've even got it on tape - the local PD has a copy for training purposes). I've seen what happens when you don't have your seatbelt on and you get ejected from your 4x4 at 80 miles per hour - the lady lived by the way, although looking at her in the video you wouldn't exactly call her lucky... I've seen teenagers with their whole lives ahead of them lying dead on the pavement because they thought it'd be fun to drive around high and drunk. And that's just the beginning. So am I evil for making money due to other people's misfortunes? I tell you this with absolute sincerety - the pay isn't nearly high enough to spend hours looking at what I've seen.

So now maybe I'm not so anonymous and not so full of ----, Dan. But you're the expert. What do you think?

not sure why it would do that.
Mine works great.
Do you have re-chargable batteries in the unit? If so, make sure you have them installed in the YELLOW cradle.
Hope you figure it out...

---> Here is my reply to what KB wrote 11/27/02 12:06:00 PM

The sound of the control channel is the best indication. There are a number of websites on the net that have samples of the control sounds and other digital modes, a search should send them up. Other wise you can do a hit and miss with something like turnker or e-trunker to see what you can get to decode

Yeah, but that's not the goodie you want - they make actual "black boxes"
that turn your antenna INTO a scanner antenna as far as the scanner is
concerned.

This is a pretty interesting thread - lets expound on it: Anyone know how to
make your own version? Would it be too much trouble or really easy or
somewhere in the middle? Maybe I could try it - might be fun even....

You don't need a board for those modes. The AGW packet engine,
combined with the AGW Terminal program, does packet nicely.

http://www.raag.org/sv2agw

I use MMTTY for RTTY.

http://www.qsl.net/mmhamsoft/mmtty/index.html

Both systems use a soundcard for both transmission and reception.

5307. Pro-95 low battery alert?

Newsgroup: rec.radio.scanner
Date: 2002-11-27 23:30:34 UTC
From: Buteo Lagopus <lbl@pbzpnfg.arg>
Message-ID: <Xns92D3BC785F6DEyoycomcastnet@216.166.71.239>
Source record: 41147

The Pro-95 low battery alert beep has been going on for an hour but my reception is still clear. It beeps every two seconds.

How do they determine the alert time? Measuring voltage, I'm guessing. If so, isn't polling the batteries (approx. every 2 seconds, if the beeps are an indicator) adding to power drain?

Also if you're using rechargables, is that going to effect their "memory" if you swap them out when the low battery alert kicks on?

What's happening to the scanner in the meantime? Is it slowing down the scan speed? Sensitivity? I'd like to get my money's worth out of my alkalines.

I wish you could shut off polling the voltage and/or the beep.

Heck, my transistor radio doesn't bitch about low batteries!

Any thoughts?

All the best,

Andy

PS> This has plagued other scanners. The AOR 8200 runs the bats way down before it starts complaining.

That's a great link...I was able to identify the 939.9500 control channel as
EDACS narrow band from the sound. I suspect TXU...Texas Utilities.
TXU has a huge system in Texas, but no listing of frequencies for my area.

So would I determine the voice frequencies for this 900Mhz
system I have apparently discovered? So far I've found only one voice
channel in the 935-940 MHz range.
And I can't find any database showing more than one trunked system
here in Tyler, Texas, a Motorola 800MHz (police, fire etc).

5311. recording multiple scanners?

Newsgroup: rec.radio.scanner
Date: 2002-11-28 01:15:07 UTC
From: bolt thrower <tucansam@whodis.org>
Message-ID: <as3qmr$p7u$1@reader1.panix.com>
Source record: 41150

today i was listening to my handheld on my couch when a high speed pursuit began less than a block away from where i live. the pursuit went on to involve units from two county, three city, and one highway jurisdiction. i started cycling through all of these freqs, trying to keep up. i ended up staying with just my local city units. but it made me wish that i hadn't put my other three scanners in my store room, buried under a pile of computer junk. i need to dig those up...

anyway, in a case such as this, when units are talking back and forth fast enough that the delay feature of my scanner is never disengaged, the only option is to have a scanner on each frequency of the different law enforcement agencies, right? one on the city police, one on highway patrol, etc.

ok, so now i have these, say, four scanners, each monitoring a seperate frequency. everyone is talking about the same thing, and its starting to get hard to pay attention to what's going on. i want to be recording all of this.

i've set this up in the past, but with only one laptop, and one scanner, using shareware. the laptop records only when the scanner has something to say, i'm sure you are familiar with this.

so how can i use a single computer to record multiple scanners? if i want to record a number of frequencies at the same time, and i don't want to miss anything, i need each freq recorded seperately. but can this be done with only one or maybe two PCs?

thanks.

I thought the WinRadio was for shortwave listening. If in fact you are interested in Shortwave, the WinRadio is apparently junk (per the "Passport to Worldband Radio" review). The best PC controlled shortwave is apparently the Ten-Tec 320.

hth,
jeff

I am selling a MINT, in the box Pro-93 scanner by Radio Shack.

$100.00 shipped via USPS Priority Mail, insured.

I will accept a US Postal money order, PAYPAL, or personal check. Shipping will wait until the check clears.

If interested, reply via e-mail.

Dan

Message-ID: <15b4be0.0211272319.fafc01d@posting.google.com>
Source record: 41164

I would like to know if anyone is using a mobile (but permanent installed on vehicle) UHF-70cm/440 MHZ antenna for 800 trunking....my area is partially trunked and partially conventional 460-mhz police comms.....without mounting ten antennas on my vehicle I would like to know if a 70cm ham antenna might work as a good overall performer

aside that, any recommendations on a pure 800-mhz mobile antenna?

I am thinking about just buying a analog 800 cell phone mobile antenna and using that

THANKS

Bill

RS has that cell looking glass mount antenna which works pretty well.
Unless you're far from the repeater I'll bet your 440 antenna will
work just fine. I've used all kinds of antennas for our local 800
system and it all works just fine. The tower is about 3 miles away.

It is not a party line phone. Its a 800mhz cellular phone.
It looks like it was made between 1994-1998.
Its a 3 watt bag/mobile phone made by Motorola.
It is a analog phone and requires going into test mode to be able to listen
to certain cellular frequencies.
As far as I can remember they do NOT scan the cellular freq., you must enter
a desired channel/freq. pair to monitor. It is NOT a scanner.

The type of "party line" phone being referred too, was the old UHF IMTS system of phones that shared towers. Almost like community repeaters. That is not what the guy is selling.

Good luck! I've owned one for about a year now, and it's a great scanner. I own a few high end receivers (AOR AR-5000, Icom R-8500, Realistic PRO-2006, Bearcat 780xlt), and the BC 895 holds its own when compared to them. Sensitivity and image rejection are very good, and the trunking works great once you have it programmed correctly. I have mine scanning the NJ State Police trunked system as I type this.

Email me if you have any questions.

Wrong, pal! You didn't "build" anything. You scammed one of the the "original units" and used it by "stealing the key". Rather than putting any labor into the process, you parasitically coasted along using the efforts of others; all the while smiling smugly and proclaiming the actual worker here was going to cheat everyone. I guess in your twisted psyche that makes you some kind of revolutionary freedom fighter, right? Someone else here accurately identified the kind of person who does this kind of stuff as a "bottom feeding lowlife".

All this rationalization and class warfare rhetoric is nothing more than sophomoric way of denying the fact that you stole the fruits of someone else's labor! Am I correct in assuming that if your neighbor has "too many" cars, you're entitled to take whichever of them you wish to use? The software developer/programmer didn't earn back his investment plus a reasonable profit on the first "unit" that was sold, it was anticipated that it would be returned on the sales of ALL units in use. Your high school level analysis ignores the fact that centuries of jurisprudence and societal convention recognize concepts like copyrights and patents. Look everyone, under Dipstick Gary here's theory he is entitled to just take any book he wants to read from a bookstore, because the author and publisher made their money on the first ten ... or first hundred, thousand or whatever ... copies that were sold. By any rational logic you are a thief and nothing more - and a stupid one at that because you proudly proclaim in public the righteousness of your crime. "Proudly" and "publicly" I say while noting that you hide behind an anonymous ID like the craven sleaze that you are.

Folks, snakes like this need to be stomped on - mercilessly!

Ok I'm new ok
I have a Radio Shack Pro 95
Our local police use the EDACS Trunking system
There are two towers East and West
Some one said I had to put each tower in it's own bank
It works that way. I can receive both ends of the radio traffic
WHY does each tower need to be in it's own bank on the scanner
and can I add other frequencies in the banks?
My banks are 100 channels each that ties up 200 channels.

Thanks
don

It is an old 'car mount' cell phone. I used to have one just like it, only the 'bag' (portable) version. You can see the screw mounting holes on the box, used to mount on the floor between the seats (or under a seat). They came with the 'rubber ducky' antenna you see and you could get an optional mobile mount antenna.

Looks like some buyer is going to be mighty pissed when he finds out he paid over $100 for an old analog cell phone that doesn't 'scan' the cell frequencies!!

Heck, at those prices, I may just have to get out my old cell phones!!

Two freqencies are easy. Record in stereo, one radio on each side. From there you'll need to record in multitracks. It may take a bit of memory to do this day after day, but it would work.

I think Cool Edit can be upgraded to 16 or 24 tracks.

That's alot of listening !

5351. Beachwood, NJ Fire frequencies wanted

Newsgroup: rec.radio.scanner
Date: 2002-11-28 22:41:05 UTC
From: vhfradiobuff@yahoo.com
Message-ID: <1996cb6d.0211281441.6196cb70@posting.google.com>
Source record: 41191

Hello everyone. I have posted this message in the past but never got what I was looking for, so I will try it again.

I am looking for frequencies actively used by the Beachwood, NJ fire department. People have directed me to websites that have frequency listings and I've entered those in, but never heard anything.

Is there anyone here that actively listens to them? If so, SPECIFICALLY, what are the frequencies used and what are they used for (dispatch, command, talk around, etc..)

Thanks in advance.

(briefly OT here, sorry)

That's exactly what I meant by Playstation fiasco - I was one of the
first to snap up a PS when it came out in '96, my serial number was
below 2000.

It never worked right, the vendor refused to take it back and only
after I pawned it off did I find out that it was SHIPPED defective
(most games wouldn't load unless the machine was upside down ;)

(back to scanner stuff)

No, I'd rather have a nice reliable scanner - but it seems that the
785D is indeed available next week - according to

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=14956&item=1940141093&rd=1

And according to the PriceWatch page linked to by Harry Marnells' most
information digital scanner news...

http://www.freqofnature.com/pricewatch/index.html

This eBayer could indeed be a fraud, seeking to snag the unwitting and
the overeager ;)

People =are= bidding though - anyone from this NG?

Over 200 actually ;)

Yeah, considering you can find these things by the bushel at any
decent thrift store, this 5-feedback vendor looks to be begging for
his first negative

Seein' as how HR3842 makes even unintentional reception of cel and
cordless phones a felony, you'd think the guy would be a bit more
discreet in how he sells it

Hey "me"

I'm glad you've seen the things you describe. I'm a firefighter/paramedic for a large urban fire department. We respond to all sorts of scenes which I don't feel a need to describe.

Obviously I can't speak for your locale, but many jurisdictions have laws granting emergency response agencies (like police and fire) complete control over emergency scenes.

These laws exist for the protection of the public and the responders. There have been a number of times I or my coworkers have had to block or escort "journalists" intent on "getting the story" back outside the yellow tape or away from distraught bystanders.

In one case a TV news stringer received a disabling injury from sneaking inside the line to get closer to a vehicle crash scene -- his rescue took longer than that of the entrapped patients and diverted resources that were needed for other calls.

Once in a while newbie reporters or photographers try to challenge our authority at emergencies, either on-scene or in court. Funny, but they never seem to win their claims -- in fact I haven't heard of a case around here that got past preliminary hearings before being thrown out.

Many agencies are more than willing to set up press viewing areas and some provide a PIO (Public Information Officer) on large scenes to facilitate media coverage.

The particular breed of "journalists" who like to jam their cameras at grieving families or grab shots of agonized victims have the unique contempt of firefighters and police officers everywhere. Hopefully that's not you, though.

>I wish you could shut off polling the voltage and/or the beep.

There is way to shut the beep off.
Turn the unit off, then when you turn the scanner on and you see the "Welcome
To
Dual Trunking" press the number 2 on the key pad when the above message is
displayed. It will then read Key-Tone Off.
To turn the beep on again, repeat the first step, only press the number 1,
instead of 2. If you want to run a Re-set test, repeat the above steps then
press 7 or 8 (not sure which).
But be warned, doing the re-set test will CLEAR all your banks and channels.
I found that out by accident.
Hope this helps...

Welp, vendor just responded to me, he swears he'll refund if not
shipped by the 10th but like the pricewatch-page thingy says though,
he has no storefront, been a eBay vendor only a few weeks

Since a 785 showed up at a hamfest is it possible for some extra-savvy
insider to get their mitts on some pre-release demo radios?

When my wife worked for Computerland, she got several oddball bits of
software and hardware, not to mention a bunch of MicroSoft mice long
before they were sold at Frys (?) and such

Jeez, are there radios released for like =reviews= weeks ahead of the
main ship date?

I haven't had a radio since losing both of mine in a burglary early
this year *snivel* and have put off buying a new one till the 785 was
released - it sems most of the members of the group have been through
such a waiting game before

New to me ;)

5372. Re: pro 92 repair

Newsgroup: rec.radio.scanner
Date: 2002-11-29 11:34:54 UTC
From: Jim Mac Donald <jmacdon@mitre.org>
Message-ID: <3DE750DE.D912A0AA@mitre.org>
Source record: 41113

Us an external battery charger to charge the 6 AA's, out side the scanner.
Or send the PRO-92 back to RADIO SHACK for repair/replacement of the power
jack. They have a flat rate, plus parts and the turn around time is
several weeks. You may also want to ask them to replace the antenna jack.
If you take the antenna on and off the scanner a lot the BNC jack gets
worn down the solder joint can brake off on the PC board or it becomes
loose inside the radio scanner. It pays to have a complete "tune up" done
if your sending it in.
Jim

Your such an idiot.... your reading reviews of the 1000 series winradio
the first generation. Suggest you check
the specs of the 3000 series or even the 1500 series

The 3150i that I have is at least equal to the performance of my Yeasu FT 767
GX
in shortwave reception on the same antenna.

I've seen you "promote" the Ten-Tec in several posts... so I have to conclude
that you own one and bash other equipment to convince yourself yours is
better than it really is.

Source record: 41117

On occasion, I have used "open house" and community events - where a fire department has its truck on display - to learn more about the frequencies a department has in its radios.

With Christmas coming up, you might want to check on whether Beachwood Fire is participating in any local parades. Folks are usually in a friendly / receptive mood, and they will be standing around doing nothing, between the time parade participants are lined up, and when the parade begins.

Very interesting. According to what I've read on Strong Signals.net, the BC-250D and 785D are slated for release in mid January. Unless the release date has been moved up, I would be wary of this auction. If you note, the seller quoted an old press release from July 10, 2002 that stated both scanners would be released in November. Also, the photo provided by the seller is quite small.

I will email the seller and ask if they were aware of the revised January release date, and I'll post a follow-up here.

Go to this URL for a troop location map:

http://www.troopers.state.ny.us/Directory/TroopInfo/TroopInfoindex.html

and here's other info - I'm not sure where I found this:

The State Police are administratively divided into lettered Troops A, B, C, D, E, F, G, K and L.

Troop T is the designator used by Troopers employed by the New York State Thruway Authority. It is not an actual NYSP Troop and only has jurisdiction on the Thruway. Thruway cars are painted slightly differently from regular NYSP cars and use 4-digit numbers in the 7000 series on the NYSTA frequencies. When operating on NYSP channels, they use regular Zone-Troop-number-number identifiers like 4T-25. All Thruway Authority dispatchers for the various divisions are located in one room in Albany.

There are no Troops H, I, or J.

NYSP used a single statewide CTCSS (also known as PLT) tone of 110.9 Hz until mid-1998. 110.9 Hz is still used on statewide channels, but new tones are being phased in as follows:
Troop-wide 110.9
Zone 1 127.3
Zone 2 146.2
Zone 3 167.9
Zone 4 192.8

Unit Numbering

While most NYSP car numbers sound like they have four digits, all NYSP units have 5-digit numbers. Most units have blanks embedded in the unit identifier and those blank digits are simply not spoken.
1st digit Type of unit (per table below)
2nd digit Troop or special letter designator (per table below)
3rd digit Non-patrol designator (per table below)
4th digit Rank or function designator (per table below)
5th digit Unit sequential number (Blank for Administration units)
Unit Types (1st digit)
1 Zone 1 patrol 6 Portable
2 Zone 2 patrol 7 other PD
3 Zone 3 patrol 8 Miscellaneous
4 Zone 4 patrol 9 Communications
5 BCI Blank Administration

Troop or Special Letters (2nd digit)
A Troop A L Troop L
B Troop B M Major Crimes Squad

C Troop C N EnCon (first digit 7)
D Troop D P NYS Dep't of Corrections
E Troop E R Radio / Communications
F Troop F S Special Intelligence Unit
G Troop G T NYS Thruway Authority
H Helicopter V Violent Felony Warrant Squad (first digit blank)
K Troop K X Governor's Protection Unit

Non-patrol Designators (3rd digit)
If unit is patrol or Administration unit, the 3rd digit will be blank. For all other units (1st digit 6, 7 or 9) the 3rd digit gives the patrol zone location assigned to the unit.
Rank or Function Designators (4th digit)
Troop Administrative units - 1st digit Blank
1 Major 6 Unmarked unit
2 Patrol Captain 7 Non-radio unit
3 same 8 Miscellaneous unit
4 same 9 Communications
5 BCI Captain

Troop Patrol units - 1st digit 1 through 4
1 Zone Lieutenant (followed by Blank) 5 Unmarked Investigator
1 Zone patrol 6 Unmarked unit
2 same 7 same
3 same 8 same
4 same 9 same
BCI units - 1st digit 5
1 Lieutenant
5-24 Senior Investigators
25-199 Investigators

NYSP Radio Codes
"Code Orange" heard - meaning unknown.

NYSP File codes
1 Stolen Motor Vehicles and Motorcycles
2 Motor Vehicles - Information Requested
3 Emergency reports to division headquarters
4 Hit and Run Drivers
5 Persons - Wanted or Escaped
6 Persons - Missing
7 Burglary
8 Robbery and Holdup
9 Property - Lost or Missing
10 Property - Stolen
11 Assault
12 Homicide
13 General Police Information
14 Orders and Administrative Messages
15 Request for Information (Misc)
16 Lost or Stolen License Plates
20 Criminal Investigations (BCI Only)

24 Legal Bulletins and Opinions
25 Miscellaneous Messages
26 NYSPIN Trouble Reports
27 Weather Bureau Fallout Data
28 Road Conditions and Weather Reports
44 NYSPIN Test Messages

5380. 2m repeater in NYC

Newsgroup: rec.radio.scanner
Date: 2002-11-29 14:12:19 UTC
From: wf3h@ptnospam.com
Message-ID: <3de77370.5220557@news.ptdprolog.net>

I travel to NYC for duty at USCG station Sandy Hook weekly. I was on duty for 9/11 and at that time used the repeater on top of the Chrysler building, the one on top of the WTC no longer being available.

Is there a repeater in the NYC area that is a main repeater? I know there's one on top of the Empire State Building. Any others that many people use? (Along with PL's if any)

Idiot is a little strong.

First, I don't own a Ten-Tec, but was interested in the computer controlled radios/scanners, so I did read some reviews.

Second, Passport to WorldBand Radio, 2002, gives the WinRadio 1500e two stars. It is true that a new version of the radio is out, and perhaps it is a big improvement over their 1000+ series. Nonetheless, (a) I havent seen any recent reviews, (b) the original poster didn't specify what model he was interested in, and (c) perhaps the links I provided would be helpful to the person who posted the original question

Third, I'm not so naive to think my equipment is "better" than someone else's nor am I looking to bash other people's equipment. On the contrary, I try to get the most out of the inexpensive equipment I do have, and read about equipment that maybe someday I can own.

jeff

Nah, they make really good wide-band scanners and have many new
models. They also have an upcoming shortwave receiver which appears
rather interesting. See http://www.winradio.com/home/g303i.htm .

5385. ARNewsline 1320 - Nov 29 2002

Newsgroup: rec.radio.scanner
Date: 2002-11-29 18:12:57 UTC
From: radionews@aol.com
Message-ID: <20021129131257.10484.00000401@mb-cg.aol.com>
Source record: 41128

Amateur Radio Newsline Report 1320 - November 29, 2002

Amateur Radio Newsline report number 1320 with a release date of Friday, November 29, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. The International space station gets a new crew and all are ham radio operators. Newly licensed Solomon Island hams take on an emergency communications challenge and good news for a California ham. These stories and more are coming your way on Amateur Radio Newsline report number 1320 right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: NEW ALL HAM CREW ARRIVES AT ISS

The international Space Station has a new crew which plans to start operating the ARISS Amateur Radio station in about three weeks. They boarded the staton on Monday the 25th of November. They plan to be there for about 6 months. All three are licensed hams.

Look for Ken Bowersox KD5JBP, Nikolai Budarin RV3FB and Don Pettit, KD6MDT. They will use the Space Stations calls ... RS0ISS over Europe and NA1SS for the United States. Contacts can be heard on the downlink frequency of 145.80 MHz.

They replace Peggy Whitson, Valerie Korzun and Sergi Treschev. Valerie, RZ3FK, was very active, on the air almost every day, while Peggy conducted many memorable school contacts. (ARISS)

**

RESCUE RADIO: SOLOMON ISLAND NEWS HAMS PROVIDE DISASTER RELIEF

We reported their graduation last week. And while the signatures on their ham licenses may not yet be dry, a group of Solomon Island hams are already off on their first rescue radio adventure to Malaita Island:

--

Thats right Roy. Q-News reports that three graduates from the Amateur Radio Training School of the Solomon Islands have gone by ship to provide emergency communications for flood affected areas on Malaita Island, near Guadalcanal. With them are with 19 tons of rice along with officials of the National Disaster Council.

These new Hams will operate a ham radio station at the Red Cross clinic on South Malaita island. They will report on the distribution of supplies to the National Disaster Council HQ in the Capital of Solomon Islands.

This is the first humanitarian deployment of the school's initial graduates. It also provides the Solomon Island hams their first real experience in helping people with radio knowledge of Amateur Radio.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

The three hams making the trip are identified as H44MKA, H44WSB and H44SF. As we go to air they should be operational from a Red Cross clinic set up on the south end of the island. More information is on the web at www.h44A.com (Q-News)

**

RADIO POLITICS: HAM CCR BILL DIES AS CONGRESS CONCLUDES SESSION

The 107th Congress has adjourned without taking any action on an ARRL sponsored legislative measure to free Amateur Radio of land use restrictions commonly known as C-C and R's. The ARRL indicates it plans to try again when the 103rd Congress convenes early in 2003. (ARRL)

**

RADIO AND THE LAW: CALIFORNIA SUPREME COURT SIDES WITH HAM

Still with antennas and land use, we have an update on the court battle of Mark Abrams, WA6DPB versus the city of Rancho Palos Verdes California. Amateur radio Newsline's Bruce Tennant, K6PZW, has the good news:

--

The good news is that the California Supreme Court has upheld the right of a California property owner to use antennas on his property for any reason he wants. It did so on Friday, November 15th when it denied the request of the the City of Rancho Palos Verdes to hear an appeal of the decision of the California State Court of Appeals in the case of The City of Rancho Palos Verdes vs. Mark J. Abrams. This means that the decision of the Court of Appeals is now state law.

The earlier decision of the said that Amateur Radio operators are entitled to an "exalted" status, thus giving amateurs new hope for getting antenna arrays approved. And Abrams says that there are many precedents that can be extrapolated from this ruling, but he says that the case clearly establishes that a city in California cannot tell a resident what to do with an antennas once they approve the actual array.

According to Abrams, the legal precedent applies only to California. But he says that when most states are looking to set a precedent, they will look to either California or New York. And since there is no precedent in New York on this subject, it makes California the one to serve as a guide to other states.

For the Amateur Radio, I'm Bruce Tennant, K6PZW, in Los Angeles. (WA6DPB)
--

Abrams tells Amateur Radio Newsline that he is now going to file with the Federal Court of Appeals to declare the City's appeal of his injunction against the City of Rancho Palos Verdes as moot.

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WE4B repeater of the Palmetto Amateur Radio Club serving Miami Florida.

(5 sec pause here)

**

RESCUE: ZL1AMO REPORTED ON LIFE SUPPORT
The Radio Society of Great Britain reports that well-known D-X'peditioner Ron Wright, ZL1AMO, has been taken ill. According to Wright's daughter Terri, her dad suffered collapsed lungs while in Fiji. He was air lifted by an emergency air ambulance to Auckland New Zealand where he was initially reported to be in critical condition and on life support.
A later report from Terri Wright says that her father is currently in stable but guarded condition. The RSGB says that Wright had been operating from Fiji as 3D2RW. Regular updates on Wrights condition are being posted to the web at www.papays.com/opdx.html (RSGB, ZL2BHF)

**

ENFORCEMENT: EX-HAM ARRESTED FOR ALLEGED ATTACK ON POLICE OFFICER

A former ham who resigned from Amateur Radio has been arrested in the hills of North Carolina following a manhunt that has lasted over a year. Steve Anderson, the ex-AA8DP, is accused of shooting at a police officer.

Anderson was a member of the Kentucky State Militia, a civilian paramilitary group, until April 2001. As previously reported, that militia group dismissed Anderson because he refused to shut down his unlicensed radio operation. (Published news reports)

**

ENFORCEMENT: ATT FINED FOR TOWER VIOLATIONS

The Federal Communications Commission has released an order imposing a $117,000 fine against AT&T Wireless Services, Inc. for safety-related violations of the Communications Act and the Commission's antenna structure rules. This action follows routine antenna structure inspections and related investigations conducted by Commission field offices throughout the country.

Before issuing the fine the FCC determined that AT&T Wireless committed seven separate violations of the antenna structure requirements as outlined under Part 17 of the Commission's rules. Included were failure to register, light, and paint antenna structures, and failure to post antenna structure registration numbers at the base of the antenna structures. (FCC)

**

ENFORCEMENT: VICTORVILLE CA PIRATE STILL ON THE AIR

Another unlicensed station has been discovered in California. According to Chris Compton writing in the CGC Communicator, he noticed a pirate operating on 90.9 MHz in Victorville while driving through the town not that long ago.

Compton, who is a Director of Engineering said that the unlicensed transmitter was taking out KGZO on 90.9 MHz in Shafter. The pirate was also heard doing commercials for his Nextel Store in Victorville.

Now here's the best part. When Compton called the unlicensed operator, the person responded that he had a "demonstration license" from the FCC and that it was good for one year. He told Compton that the licensed allowed him to "demonstrate" the line of transmitters he was selling along with custom built antennas for the FM band. He then asked Compton if I wanted to buy one.

The first monitoring of the pirate was in September. Compton said that he reported the situation to the FCC. He adds that he was in Victorville not long ago and the pirate was still on-the-air. (CGC Communicator)

**

RADIO POLITICS: JONATHAN ADELSTEIN SWORN IN AS FCC COMMISSIONER

FCC nominee Jonathan Adelstein has been sworn in to fill the Commission's remaining open slot. Adelstein will finish out the term of former Commissioner Gloria Tristani, which ends in June.

According to the ARRL Letter, the White House nominated Adelstein last February. But the nomination of the Democrat and a prot,g, of South Dakota Senator Tom Daschle had been held hostage for most of this year because of political wrangling over several judicial nominations. (ARRL)

**
CONVENTIONS AND HAMFESTS: HAM RADIO UNIVERSITY 2003

LIMARC -- The Long Island Mobile Amateur Radio Club - will hold the 2003 edition of its very popular Ham Radio University on Sunday, January 19th. Location is the East Woods School in Oyster Bay New York with the doors opening at 8 A.M. Eastern Standard Time.

Ham Radio University is a day-long session of intensive training in just about every aspect of Amateur Radio. The focus will be "hands on" with many demonstrations. And this year there will be special forums geared to the non-ham as well as the experienced ham radio operator.
There will also be a V-E testing session for those who would like to take an FCC exam and a Special Event Station set up and operational on the High Frequency bands.

Ham Radio University is a cooperative effort between over twenty clubs and organizations in the New York City- Long Island area. It is also the American Radio Relay League, New York City-Long Island Section Convention. For more information about Ham Radio University please contact George Tranos by e-mail to N2GA@arrl.org. (LIMARC)

**

GATHERINGS AND MEETINGS: MORSE CAMP IN THE U-K

A Morse code training camp is planned for the weekend of the 11th and 12th of January 2003 in the United Kingdom. The venue will be The Beacons, Simons Lane, in the town of Frodsham. For further details please contact either Catherine Pearson at RSGB HQ or Kath Wilson, the RSGB Regional Manager for North West England. Pearson can be contacted on by e-mail: toar.dept@rsgb.org.uk. Wilson can be reached at dwilson@btinternet.com (GB2RS)

HAMVENTION 2003: "THE YEAR OF THE YOUNG"

The 2003 Dayton Hamvention will have "The Year of the Young" as its overall theme. Planners say that the show's focus will be on the young ham and on bringing 12 to 18 year olds into the Amateur Radio hobby. More information will be posted on-line at www.hamvention.org as soon as final plans are made firm. (Dayton Hamvention*f*)

**
EMERGING TECHNOLOGY: MICROSOFT EASES RESTRICTIONS ON NEW XP MEDIA CENTER

Microsoft says that it will relax restrictions on how users of its new multimedia Windows XP Media Center operating system will be able to copy and distribute TV programs. As a result of the changes, users will be able to view unprotected TV programs copied onto DVD on any PC with Windows XP Media Center Edition. TV programs with built-in copyright controls will still prevent users from making copies.

Originally, Microsoft had developed the software so that users could only watch television programs stored on the hard disk or copied onto a DVD on only one machine. That being the PC used to record the original content. (Microsoft)

**

OUR HERITAGE: REMEMBERING THE RADIO OPS OF WWW2

The event that lead to the United States becoming involved in World War 2 will be commemorated by Amateur Radio. This, as a group of survivors of the Japanese sneak attack on Perl Harbor visit the USS Hornet and take to the air this coming December 7th.

The SSB Frequencies will be 7.260, 14.320, 21.320 and 28.320 MHz. CW operations will be found on 3.530, 7.030, 14.030, 21.030 and 28.030 Mhz. Operating hours will be from 0900 to 1700 Pacific Standard Time. A special QSL Card will be made available for those who make contact. (KB6SSN)

**

INTERNATIONAL - CANADA: VC2C ON 60 METERS

An update on whats become an international version of the U-K five megs experiment. Word from Canadian that station VC2C was recently given special permission by the Canadian radio authorities to operate on the 60 meter band. It took to the air between the 21st and 25th of October. During that time, VC2C made two-way C-W contacts with four G stations, one GM and one GI operator. All contacts took place on 5.280 MHz. (RSGB)

**

INTERNATIONAL - NEW ZEALAND: NZART CALLS FOR ELECTIONS

New Zealand's national ham radio society, the NZART has placed a call for nominations for those who want to serve on the Council and as the organizations President. NZART says that New Zealand hams have until December 31st to file their nominations. (NZART)

**

ON THE AIR: WSWSS 2 METER NET GOES PSK-31

A popular weak signal net is going digital check-in. David Peters, KI6FF, says that the Western States Weak Signal Society 2 meter Southern California Technical Roundtable net held Tuesdays at 8:30 PM Pacific on 144.130 MHz is going PSK 31 only for check-ins. Once the

evenings roster is complete the net will move to SSB and help people who need to get their equipment and software setup and checked out. (VHF REflector)

**

DX

In D-X, word that G0UIH will be in Australia and active as VK2IAY/P until the 15th of December. During this period, Steve will operate from several different rare IOTA island groups. Look for him on or around 14.260, 18.145 or 21.260 MHz on SSB only.

And NK3T will be active from McMurdo Station Antarctica as KC4 slash NK3T until late January or early February. QSL via his home call.

Also, special event station ER60SB will be on the air from the 23rd of January through the 2nd February 2003. This to commemorate the 60th anniversary of the Battle of Stalingrad. QSL via ER1DA either direct to Valery Metaxa, ER1DA, P.O. Box 3000, Chisinau, MD-2071, Moldova or via the bureau. (This weeks DX courtesy GB2RS)

THAT FINAL ITEM: FIGHTING BACK WITH A PHONE

And finally, here's one from the pages of the French e-magazine La Companion that we found surfing the Internet. Its the story of fighting back with a cellular telephone. Amateur Radio Newsline's Norm Seeley, KI7UP, has the curious details:

--

Maybe its all net-lore, but supposedly a female bus rider in a Paris suberb was annoyed by a loud-mouthed cellular telephone phone user a few rows in front of her. The fellow so boisterous that she could not even hear her companion seated right next to her.

Then the cellular bully supposedly made the mistake of mentioning his cellphone number during the conversation. A few minutes later, the lady picked up her own phone, called the man and asked him to: "...be quiet please".

But he refused. In fact he was so incensed by the call that he started to use all kinds of unsightly language. That is until he finally realizing where he was and that everyone on the tram was staring directly at him.

Undaunted, he supposedly stood up, uttered a few more choice words and exited at the next stop. The woman and her companion received a round of applause.

For the Amateur Radio Newsline, Norm Seeley, KI7UP

--

And what else needs be said! (Tommorrows Technology)

Usually that high up those are company frequencies.

IE. delta, US Airways, propably in your neck of the woods
I would guess United.

Source record: 41126

Manhattan uses, 147.000 - offset no tone
147.270 + offset, no tone
146.670, - offset, no tone
145.450, - offset, no tone
147.360, + offset, no tone
147.150, - offset, no tone
also listed in Mahattan are:

145.270, - offset, 156.7 tone
147.195, + offset, 136.5 tone

Those should be accurate according to the latest arrl frequency directory
but do a search on ARTSCI for amateur radio frequencies and he has a
pretty up to date listing as well.

You didn't look very hard then. It was in the first link that I did in a
search on Google.com by entering "134.9" +ohio

134.9Mhz is Cleveland Center Approach. Departure is on 317.7 if your scanner
receives those frequencies.

Kool, my only followup so far is that the guy =swears= he'll refund if
he doesn't ship by the 10th. I've had excellent results so far using
PayPal to force refunds if someone doesn't ship as promised, but I
dunno if someone =could= take several payements, say 10 payments for
400 dollars each collect the money and bail before anyone could do
anything

The guy is definitely claiming to have them to ship this week

Ah, well, I'm gonna follow the general consensus and just be
(*twitch*) patient - spend my Christmas beating on some old DX-394 or
such

Military coups are =almost= as much fun to listen to as trunked police
radio ;)

Message-ID: <as8snv$e53$1@reader1.panix.com>
Source record: 41140

I am looking at adding a trunking, computer controlled scanner to my setup. I have a Pro-79 and I love it, and definetely want to get another handheld. Looking at the Pro-93 and the new 95. I've seen Pro-93's reasonably priced on ebay, and the new 95 is just about in my price range too (I'd like to spend $150 or so on the scanner and building the computer interface cable; some cash left over for coax would be great too).

Can anyone tell me the major differences between the 93 and the 95? Obviously the 95 is brand new, but what does it do that the 93 doesn't?

Thanks.

I played with a 250D almost two weeks ago at the Ft Wayne hamfest. It
didn't seem to have the digital card in it. I can't say I was really
impressed with it at all. Audio wasn't any better than a 245, and it
seemed pretty deaf on top of it. The 785 was there too, seemed to work
well, just like a 780.

If the car audio system is not made in the US, it will probably have a
switch inside that lets you select 9 kHz or 10 kHz spacing for AM. The
FM tuner may already have 0.1 Mhz steps.

Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbyists who are
frequency hunters. You will find lists of Ontario radio frequencies that are
not listed on any web page, published in any scanner book (Haruteq or Scantrix)
or listed in the government frequency list (Industry Canada's TAFL). This list
is all based on research and the patience of the people who contribute to this web page.

Bought me a Pro-95 today. Looked around on the web and found this:

http://www.pro-92.com/

According to them what Fred Hambrecht said is true. This thing can be programmed to receive MilAir band.

Here's what the site says:

"Software developed by Don Star for the PRO-93, PRO-95 and the PRO-2053 will unlock some of the missing frequencies, including the military aviation band."

But here something I'm worried about. The page also says you need a data cable that was sold by the manufacturer of the Pro-95 to use any type of software. Couldn't I just use a normal serial cable? I have one that came with a digital camera and it worked for programming my Pro-79 so why wouldn't it work with the Pro-95?

Oh I'm just all hopped up now. Guess I could just experiment and see what happens.

Well I picked up one of those Scanner Loading kits at RS and the cable they supplied didn't work. So I had a old Kodak Fun Cam kicking around and decided to try the serial data cable that came with it. Sure enough it did the job and sent data to the Pro-79. The Pro-79 can not send data.

Right now I'm trying this with the Pro-95 and it goes into clone mode, but the Win95 program doesn't seem to acknowledge that the scanner is connected to the PC.

Guess I'm going to have to look around for one that works.

[snip]

The serial interface on the PRO-95 is TTL, and the cable needs
circuitry to convert the voltages between that and RS-232.

The PRO-79 uses a straight-through cable, and is also just one way -
computer to scanner.

If your digital camera is Casio, and has a 5 volt interface, then that
cable is likely to work. You need a converter on the end so it winds
up being a 1/8" mono plug.

If that cable does not work, go back to pro-92.com and find the
software and interface pages. If you're going to build a cable, the
simplified op-amp design is the one to build. When you download
Win95, look at Don's comments about cables.

Wow. I had no idea the 79 was even capable of being interfaced with a computer, even if it is one-way. What are the benefits? What does the software allow one to do, and where can I find details?

Thanks.

It only allows you to upload frequencies to the scanner. It doesn't allow
from reading from the scanner and it doesn't allow you to override any
locked out frequencies such as the Pro-95 does.

Not really much info but you can find the product here:

Ack! I was afraid of that and with premade ones in short supply I'm gonna be stuck. I like the scanning and all but I ain't no electronics major if you know what I mean.

I really like to get the most out of my new scanner, so if anyone that has the knowledge would like to donate one of these cables to me or allow me to purchase one for a reasonable price I'd be much obliged.

I think it is one trunk system per bank, but you can put conventional channels in the remaining open spots in each bank (i.e.. trunk freq and conventional in the same bank).

I have two scanners in immaculate condition:

1- Alinco DJ-X2000 (U.S. version). In as new condition. Will be shipped double-boxed in original packing material. Original manual, battery and quick-charger. Radio will also be sold with the stock antenna and a Watson 889 telegainer. Asking $425.00

2- Pro-92 (original firmware) - this was purchased a few days ago and I have since received a Pro-95 as a gift. The radio is, again, in as new condition and will come with the stock antenna and a RS lapel speaker. Have original manual and Trunking guide, do not have original box. Asking $110.00

The above prices do not include shipping/insurance.

Please e-mail direct for more info.

>no LOU I live in Fayette County (GA) I was goig to the police dept but
>they will not give them to me they say they really dont want people
>knowing what is going on in my county.

Yep, just like the military, race car teams, Al Quada (Qaeda, Queda...) and I'm sure those strange "hams" I hear at 3 am on 440 don't want people understanding what is going on either

Kinda scary though when "public safety" is a private affair ;)

I found all sorts of 10-code (Q code, 100 code etc) on a Google search... Dogpile, Hotbot, the public library (under CB radio, 10-codes are pretty standard)

Here in Seattle they use this completion code thingy called MIR (?) codes, where some like "460 O" means they pulled somebody over but just warned 'em The codes I understand were provided to the public by a disenchanted former cop, but they do get modified from time to time

oh - here's one from Whitfeild Co GA, betcha yours is almost the same :)

5434. Scanner Master Freq Listing Booklet Acronyms, etc. Questions

Newsgroup: rec.radio.scanner
Date: 2002-11-30 18:53:55 UTC
From: Robert11 <rgsrose@tiac.net>
Message-ID: <asb1e1$6ko$1@slb3.atl.mindspring.net>
Source record: 41075

Hi:

Really new at this, so picked up a copy of the new Scanner Master 9ed pocket size
freq. listings booklet. Looks really good for a newbie like me, but they don't do a very
good job of explaing acronyms, shorthand, etc. for a newcomer to the hobby.

Would like to ask the following:

a. For most of the towns, if you read across a line, there are often two freq's listed.
e.g., for Sudbury, MA:

482.750 Fire WPS1368 127.3

Is it that all broadcasts are on 482.750 and 127.3 simultaneously?

b. Are all the freq's listed (probably) fm ?

e.g., the majority of freq's seem to be in the (very approximate) vicinity of:

47
153
453
867

-All of these likely be fm ?
-Is there a cutoff, where those below a certain freq. are (probably) am ?
-Any SSB? (if so, upper or lower?)

c. What do the letters in parenthesis mean:

Police (SOM)
Police (BRC)
Police (WEM)
Police (BEC)
Police (NEC)
Police NEM)
Police (BAPn)
Police MDT's

Any other hints, etc., on using would be appreciated.

Much thanks,
Bob

5435. Listen to Gwinnett County Police, Fire, and EMS Radio

You can listen to live Gwinnett County Police, Fire, and EMS radio
by going to

http://www.scangwinnett.com

The page includes links to the live scanner audio, the codes and
signals they use over the radio, a map showing the different police
zones, etc.

Enjoy!

No it doesn't.

This quoted from www.pro-92.com:

"New Generations of Trunking Radio Scanners from GRE
The manufacturer of the PRO-92 is GRE. In addition to the PRO-2067, they produce three other trunk following radio scanners. They are the PRO-93, PRO-95 and PRO-2053. Users of these radios report an overall improvement in trunk following performance as compared to the PRO-92. The newer scanners lack the ability to monitor LTR systems and do not have CTCSS or DCS decoding ability."

Nope. The 482.750 is the frequency in MHz. The second number is the PL tone
in Hz.

Programmed yes, receiving anything is a different matter, the filters cut off below the band and the sensitivity is very poor, I doubt you will hear much of anything

---------- Original Message -----------

Bought me a Pro-95 today. Looked around on the web and found this:

http://www.pro-92.com/

According to them what Fred Hambrecht said is true. This thing can be programmed to receive MilAir band.

Here's what the site says:

"Software developed by Don Star for the PRO-93, PRO-95 and the PRO-2053 will unlock some of the missing frequencies, including the military aviation band."

But here something I'm worried about. The page also says you need a data cable that was sold by the manufacturer of the Pro-95 to use any type of software. Couldn't I just use a normal serial cable? I have one that came with a digital camera and it worked for programming my Pro-79 so why wouldn't it work with the Pro-95?

Oh I'm just all hopped up now. Guess I could just experiment and see what happens.

Jeeez, 389 for that thing?? WITH the card, it wouldn't be that bad, but
it's hardly a 400 buck class radio, judging from what I heard/felt/saw.
$200, or what a 245 goes for would be about right. It looks and feels
cheap, the silver parts are going to look really bad after some wear and
tear..

SmartZone systems are kind of weird to monitor. If you put all the freqs
in the system in a single bank it should work fine as long as you are
only in range of a single site's control channel at a time. You will
only track the conversations from the site that the radio has locked
onto.

Enjoy!

HOW TO TURN $6 INTO $6,000!!!!!! READING THIS COULD CHANGE YOUR LIFE!
I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, Yeah right, this must be a scam, but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: what have I got to lose except 6 stamps and $6.00, right? Then I invested the measly $6.00. Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works....Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!
Suggestion: Read this entire message carefully! (Print it out or download it.) Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage)
IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends.
PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income, which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success:
STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper; PLEASE PUT ME ON YOUR MAILING LIST. Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a

piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:
Mailing Addresses
R. Overton
P.O. Box 18818
So. Lake Tahoe, CA 96151

KEVIN LEE
8377 APT. I MONTGOMERY RUN RD.
ELLICOTT CITY MD 21043

Stephanie Hicks
1283 Evening Canyon
Henderson NV 89014
Tia Loske
40 Hancock St.
Ft. Plain, NY 13339

Elizabeth Shrader
5315 atascocita west trails
Humble, Tx 77346

Cory McGuire
2273 Fourth Street
Grand Island, N.Y. 14072

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.
STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws.
Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.
PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.
NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.)
So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one

dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!
---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.
Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.
Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)
Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!
REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200
That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O. Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.
JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.
Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "hey,what if the plan is played

out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet.
Remember: play FAIRLY and HONESTLY and this will really work.

That must make for interesting high-speed hot pursuit chases... man , I can just imagine...

SEattle PD had some teenager steal a car, when they went to chase him, the =chase= cars ran into each other simply because their trunking system wasn't interconnected between precincts - and the cars couldn't tell each other who or where they were

The stuff I (and others ;) mentioned should be a good starting point - it ain't like one county would reuse the same number for a traffic stop as another countys' code for officer down, yes?

(of course, we ARE talking about Georgia, isn't that where Sheriif Roscoe P Coltrane was from? *GRIN*)

Hi,

Newbie question, please.

Located just west of Boston.

What's the "best and easiest" way to look up/identify frequencies that
you've heard, but can't identify.?

The Scanner Master booklet is very good, but they list only by town, not by
freq. unfortunately.

Also, can anyone perhaps I.D. these:

460.07190
460.07500
460.30
461.825
462.950

Much thanks,
Bob

Reviews notwithstanding, factors such as antenna(e), band interest, location, etc., must be taken into account. A wide-band receiver is of course going to be a little less selective than a model dedicated to one or a few bands. In an urban environment, intermod is going to be more of a problem than out in the sticks--and of course, the "sticks-based" QTH is going to require more in the way of an antenna, again, depending on what you're going to be listening to or decoding.

One thing I have come to appreciate since I got my 1500E is the built-in discriminator tap. It sure beats fumbling around in the innards of an expensive piece of equipment and chancing voiding the warranty, and has definitely added to the utility of the radio. To simplify, I never knew there were so many things to hear and decode.

5469. FM and WFM modes Question

Newsgroup: rec.radio.scanner
Date: 2002-12-01 22:04:57 UTC
From: Robert11 <rgsrose@tiac.net>
Message-ID: <ase106$hq8$1@slb3.atl.mindspring.net>
Source record: 41010

Hello;

using a JRC NRD 545 as a scanner.

Am a bit confused over the two fm modes the radio has; FM and WFM

The manual says: In the FM mode, signals having a max freq deviation of +/-
5 kc can be received
For the WFM mode, it's +/- 250 kc

(there's also a stereo mode you can get into via the func button and the WFM
select, but I'm not interested int this)

My questions are:

a. which mode do I want for the normal utility and P.D. freq's around,
e.g., 460 MHz ?

b. if it's set at WFM, will it also pick up what it would have if set to
the FM mode ?

c in general, when would one use WFM as contrasted to FM ?

Thanks,
Bob

5470. Re: FM and WFM modes Question

Bob,

You use the FM mode for all police, public service, etc. broadcasts.

You use the WFM mode only for commercial FM broadcast stations and the
sound on TV broadcasts.

Walt

OK, I've been reading everyone's responses about the $149 PRO-95 scanners folks are purchasing from Radio Shack. I'm seriously considering one myself. I'm pretty new to scanning, so I'm trying to get familiar with terminology and decide if the things people don't like about it are a big deal or not. My problem is, I've never owned one to compare it with. I definitely want a trunk tracking handheld. And, the price is right!

Last chance for anyone to talk me out of it! :)

Thanks for everyone's advice! Great group here!

I got mine a few weeks back. It is also my first scanner and really like it. Like you, I have nothing to compare it to, but it seems that the overwhelming majority of people are very happy with it.

One thing though. The manual is really tough to understand, and programming it is quite a bit of work. I purchased the computer cable from http://www.pro95.com and then downloaded the free software. That made a world of difference with regard to setting it up and getting all my frequencies in there.

There is also a Yahoo group dedicated to the pro-95 that is reasonably active, so you can get help/opinions there as well.

hth,
jeff

---> Here is my reply to what Michael wrote 12/1/02 5:15:36 PM

Mike, the Pro-93 and Pro-95 are good scanners for the money. You have to consider what you want to listen to and find a scanner to match that but some of the positives for the 93/95 include the alpha tag, it is really nice to be able to see what you are listening to and not just the frequency or channel number. The Win93/95 software really work great and make it easy to change your system around if you travel at all or if your scanning needs change from time to time. The sensitivity is good on the Pro-93/95 and the scanning speed is not bad. If you get the 1600 mA rechargeable batteries the life between charges is good. As a handheld it can go with you unlike a base unit.

Some of the things you should consider, not really negatives but based on what you want to listen to the Pro-93/95 doesn't receive the Military Airband, it doesn't have PL tone squelch, it doesn't track LTR trunked systems, I don't think it will track VHF trunked system (Don't have any around to check out) and it is a handheld so you have a smaller speaker to deal with and the battery issues.

I hope this helps some, so much of what you want to know depends on the specific systems you want to listen to and how you want to use the scanner.

Small correction - it does receive Mil Air with the latest versions of Win93 and Win95. Sensitivity is good at the bottom of the band and gradually gets worse towards the top. These frequencies can only be entered with the software, not from the radio keypad.

Some of the things you should consider, not really negatives but based on what you want to listen to the Pro-93/95 doesn't receive the Military Airband,

WFM = Wideband FM
FM = Frequency Modulation

The funny thing is that we think of normal FM radio as being FM, which it is, however in scanner-land it's considered wideband FM due to the wider audio frequency bandwidth required for the high(er) quality sound and stereo separation. Same for TV audio.

"regular" FM used by public service is probably more accurately called NFM (Narrowband FM), and in fact that's all you see on an AOR AR8000 - AM, CW, USB, LSB, NFM, WFM.

I guess it's all relative.

Mike

You are correct, you can enter the frequencies with the software but the VHF high filter has a cut off at 225 MHz and anything over that suffers from poor sensitivity. If you look at the tests that have been done on the receiver performance it really starts to get poor above 250 MHz.

It could just be the limited test I tried or my scanner but I was not able to hear anything in that band.

---------- Original Message ----------

Small correction - it does receive Mil Air with the latest versions of Win93 and Win95. Sensitivity is good at the bottom of the band and gradually gets worse towards the top. These frequencies can only be entered with the software, not from the radio keypad.

Do you have a need for a high-quality SMA-to-BNC antenna adapter that
is custom made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base, mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna
changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base also provides an excellent support for any length of antenna
or application.
No need to remove adapter once installed to make a quick and safe
antenna change.

Sizes to fit radio models:
Yaesu: VX-5R, VX-7R, VX-1R, FT-50-R, VX-10, VX-150, VX-110,
VXA-100, VXA-120
Icom: IC-T90, IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71, TH-F6A, TH-F7A
Alinco: DJ-V5, DJ-X3, DJ-S40
Standard: C508A, C510A
Radio Shack: HTX-420, HTX-400, HTX-245, HTX-200
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000
Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)

And a lot of land mobile is now 'narrowband' (the term keeps being refined), using +/- 2.5 kc deviation and closer channel spacing. Many land mobile radios now are sold as 'wide' or 'narrow' or both. I remember when land mobile, then hams, switched from +/- 15 kc to +/- 5. Just turn the TX deviation down, but you had to replace the Permakay filter to recover much receive audio ...

I used to listen to the space shuttle and the space station construction off of a repeater
in the Schaumburg, Illinois area. 155.xxx something. They don't seem to broadcast on
that repeater anymore. Does anyone know what freq they might be using these days.

Always had interesting coverage to listen to at night and I miss some of the un-broadcasted
coverage they always seemed to miss on the news.

TIA

Hello again, fellow scannists!

I just downloaded the November press release (.pdf) from the uniden site about the new digital scanners. One thing that jumped out at me (bullet # 6) was the mention of Motorola, Ericsson, MA-COM and E.F. Johnson.

MA-COM developed the Open-Sky system being installed in Pennsylvania. Or is MA-COM also the APCO-25 system developer?

I sure hope they mean Open-Sky.

Anybody?

All the best,

Andy

5492. tk120 v1.1 open source software for Yaesu VR-120 available

Newsgroup: rec.radio.scanner
Date: 2002-12-02 15:51:09 UTC
From: "Bob Parnass, AJ9S" <usenet2@parnass.org>
Message-ID: <3deb7fdb$0$17644$1dc6e903@news.corecomm.net>
Source record: 41032
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave

tk120 version 1.1 is now ready for free download.

tk120 is open source, multi-platform software which configures
the Yaesu VR-120 portable receiver. It runs on Linux, MacOS X,
BSD, UNIX, Windows (95 and later) and other operating systems.

Changes in version 1.1 include:

1) Memory bank channels may now be edited within tk120.
Channels may be changed, deleted, inserted, or swapped
with adjacent channels. More comprehensive changes can
be made by exporting the channels to a CSV file, then
using a text editor or spreadsheet program.

2) When the mode for a memory channel imported from a CSV file
is not specified, tk120 will set the mode according
to the Auto Band plan.

You can learn about and download an experimental version
of tk120 from:

http://parnass.com

Thanks to Russell Hall, Gary Kinsman, and Torsten Grochowski for
testing tk120. Jim Vincent, KC7RYD, and others helped by
sending me image files from their VR-120s.

I don't warrant the software, though it will cost you nothing.

You have just discovered what, to me, is the drawback of the PRo-95.
I have a PRO-93 and have to only tie up a bank of 30 channels.

As far as other freqs in the same bank, yes you can do that. I have
entered many conventional freqs. The main thing to remember is that
the bank has to be identified as EDACS and that all the EDACS freqs
are entered first.

Good luck.

Source record: 41035

Does anyone know of a way to block/skip over the data/digital noise? I am listening to a trunked system without problem (there are only a few channels), except for one of the trunk users (police) is digital and it can get really annoying. I know that this can easily be done with a trunk tracking scanner, but does the R2 have any way of skipping a frequency only when there is a data signal present?

Thanks

Darryl

Why should we pay $11.95 when they only cost $3.50 new. I can buy them
here in the UK from Maplins mail-order for ï¿½2.25 UK Pounds post free.
I could even ship one to someone in the states and it still wouldn't
cost anything like the $13.45 inc shipping you are asking.

No, I checked on ScanAtlanta (http://www.scanatlanta.com) and couldn't
find them there. You should join the ScanAtlanta mailing list
(http://groups.yahoo.com/group/scanatlanta) and ask there.

I did so to prove a point that I'm not just some poseur stirring up a pot, but actually have a legit frame of reference from which to draw my opinions and views. Too bad the point was lost on the pointless, but it felt better to say it than not. It's not my fault that some of us failed "riddles" 101. dot dot dot.

>
> Obviously I can't speak for your locale, but many jurisdictions have
> laws granting emergency response agencies (like police and fire)
> complete control over emergency scenes.

Mine is no different. I'd name it specifically, but "riddle boy" would just get all upset over it - I'd no longer be totally anonymous to him and he apparently needs the validation. So I'll play along. Enough about him - I'll address it in another thread.

I guess I did go off a bit half cocked after reading the article. It reads like all phojo's that arrive on a scene are run out of town on a rail, and that the PD thinks they're lower than pond scum. However until I go there and see for myself I guess I should reserve judgement.

> The particular breed of "journalists" who like to jam their cameras at

> that's not you, though.
>

No it's not although that has at times cost me a sale. Had one reporter call me a "wanna-be" just because I wouldn't get in closer to a victim once (I was already less than 10 feet away, jeez). I told her if my camera didn't cost so damn much I'd shove it up her.... ahem. Then I handed her a piece of paper and told her "here - sketch the {deleted} VO - I'm gone." and I packed up and left. Some of us still have dignity....even if it means being ostracized by an entire station (and thereby embraced by all the others, heh heh)

5501. Re: FM and WFM modes Question

Newsgroup: rec.radio.scanner
Date: 2002-12-02 20:13:10 UTC
From: Jim Vecchiola <jimkr2t@magpage.com>
Message-ID: <asgesmtag0@216.155.62.226>
Source record: 41041

The (narrow) mode is used for communications - police, fire, hams, etc.
The wide mode (WFM) is used for broadcast FM - either mono or stereo.
You can attempt to pick up narrow FM when youset for WFM, but the result
will be weak, noisy, with a lot of interference because of the wide
bandwidth.

These are custom units designed to fit the radio, with rubber gaskets that form to the radio to help stabilize the antenna and keep the connector on the radio from becoming broken.

> even more worthless.

Yet you respond anyway. How pavlovian, no? What fun.

> I think you'd be well advised to spare us all the lurid stories,
overly
> dramatized posturing and faux bravado "I'm gonna do this or that"
bullstuff.

Well advised by whom? Last I saw I did not notice the letters Ph D affixed to your name. What makes you the authority? You THINK therefore you're RIGHT? Who says? Why doesn't the same apply to me? Oh I forgot - you don't like riddles. Exclamation point.

>If you are really going to take on the local PD, do it; don't brag about
what you
> imagine yourself maybe doing ... someday. It'll be interesting to see how
it all
> plays out.

Well, since you're obviously not interested in the overly dramatized details I guess I won't tell you that I once took on the night watch commander over 1st amendment rights and our lack thereof under his regime, nor will I disclose to you how despite a sincere apology from him no one got a sound bite that night as "payback" for my growing cajones and speaking up. I'll just tell you that I have already taken on my local PD, and despite lots of huffing and puffing my house is still standing.

Now on to the matter of my going there, even if I were to post the details here you'd just accuse me of making it up or overly dramatizing something. Nothing I can do - me being anonymous and all, how do I prove my case? More importantly, why should I care? Oh I could keep this up for days - weeks even. That's how easy you make it.

(don't read the rest Dan - it's just another one of my "nonsensical riddles"...)

For those of you keeping score at home, if Dan had followed his own advice and kept quiet about the whole thing, what do you think would have happened? Question mark.

-me

You'll need to buy a crystal for each frequency you want to monitor. Back in that scanner's heyday, any RatShack would have what you need, but I doubt they do anymore.

Best to put a dust cover on that sucker and donate to a museum. Rat shack has cheapie scanners that are far superior to that one for less than $100.

I believe Pa. is going to be using APCO-25 via the Open-Sky system. At least the way I understand it.
Also watch for most counties in Pa., to go APCO-25 when they do go 800mhz. The state is already talking to Montgomery County, and if you check out the Montco. site, they already have Motorola Astro's on order from Motorola to start integrating into the current system. So its basically a wait a see game for us scanner guys.
Hope that sheds some light on it for you.

Curious how this guy is able to sell them lower then Radio Shack's low sale price.

Things that make you go HHHhhhmmmmm....

Will Radio Shack warranty these items?

Too many negative feedbacks in last 6 mos for my tatse.

I had no problem talking to John Blaha with nothing more'n 5/8 whip in
my car - buddy at work did it with his 2 meter HT and =sometimes= you
could hear R0MIR packet stuff with just a decent whip

I would think a rubbyducky would be a tad weak for any scanner work
beyond the neighborhood

Hardest part is knowing the shuttle is more or less overhead and when,
I useta use STSPlus, dunno if it's as good or accurate as it once was

Source record: 40957

The 780 is everything the 895 is and more. The 780 has extended
frequency range, alpha display, no special programming, and control
channel only motorola trunking. I'm sure there's more, but those are
the biggest ones. Besides, the 780 is more compact than the 895 so if
you ever wanted to use it in a vehicle or a place where space was
limited, you'd definitely want the 780.

Nice collectors item, but not worth spending money on. Get a newer
(non crystal) set. I'm sure the time you'd spend finding the old
crystals (if you can at all) wouldn't be worth it.

Hi gang.

I need a small (3" square or so) speaker to use with my handheld scanner.
I want it to be powered (12VDC) and have some amplification (5w or so) as
I'd like to mount it underneath my steering column, out of the way.

Anyone know of anything like this?

I tried that and was unable to change the file type in Explorer.

HOWEVER.....I did take another look and discovered that the default file type in the 'save as' box when starting a download from Percon is .txt. However, there was a second choice: 'All files". That's the one that worked and gave me a file with the .icf extension.

Guess I should have experimented further before posting. Thanks for the reply.

That's not totally correct. My BC245XLT tracks the NHP VHF trunking system just fine. It took a while to find the correct base and offset settings but once it did, it worked fine.

Hello and thanks for looking. I have one Radio Shack/Realistic Pro 43 handheld scanner for sale, with a date code of 12A3 (cell enabled). This scanner is in very good condition and was used in a non-smoking environment. Included with the scanner are: 6-1600 mah NIMH batteries (hardly used), 1-extra Radio Shack telescoping, all-band antenna, stock rubber antenna, wall adapter/charger, and the original box. Asking $185.00, which will include shipping to anywhere in the lower 48.

Pics available upon request.

You shouldn't because you don't recognize that there might be better parts out there than the stock $3.50 ones, and consequently you will need to learn by breaking your radio's SMA connector.

Everyone else should buy them because they are a quality product, and offer better stability and appearance than the stock adapters.

I have several of them. One of them had a problem (faulty connector from his supplier) and Stephen replaced it without hesitation.

I highly doubt this would protect your handheld for the rigors of a bnc
antenna being changed on a semi-often basis.
Stephens connector is a good one. Granted, it is the 'cream' of the crop,
and demands a premium.

>Anyone know of anything like this?

Those small amplified speakers that are sold to use with Walkman type portable radios work well with scanners. Rewire them for mono or use a stereo/mono adapter plug. You could also use one of those adapters sold to play a Walkman through your in dash cassette player for some super sound. RM~

PS, A Guitar Buddy works great for home use with hand held scanners.

5539. tk7 v0.4 open source software for ICOM IC-Q7 available

Newsgroup: rec.radio.scanner
Date: 2002-12-03 15:41:16 UTC
From: "Bob Parnass, AJ9S" <usenet2@parnass.org>
Message-ID: <3deccefc$0$1457$1dc6e903@news.corecomm.net>
Source record: 40978
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner,alt.radio.scanner

tk7 version 0.4 is now available for free download.

tk7 is open source, multi-platform software which configures the
ICOM IC-Q7A wide coverage walkie-talkie. It runs on Linux, MacOS X,
BSD, UNIX, Windows (95 and later), and other operating systems.

Changes in version 0.4 include:

1) Memory bank channels may now be edited within tk7. Channels may
be changed, deleted, inserted, or swapped with adjacent
channels. More comprehensive changes can be made by exporting
the channels to a CSV file, then using a text editor or
spreadsheet program.

2) Added a duplicate frequency check.

3) Fixed a bug so tk7 now recognizes whole number CTCSS frequencies

You can learn about and freely download an experimental version
of tk7 from:

http://parnass.com

Thanks to Vojtech Bubnik for documenting the IC-Q7 memory structure
from Goran Vlaski's IC-Q7 Windows software. Thanks to
BlakkeKatte@yahoo.co.uk for publishing detailed information about
the IC-R2 protocol and file layout on the web. I am indebted
to Debbie Fligor, N9DN, for testing tk7 on MacOS X 10.2.1.

I don't warrant the software, though it will cost you nothing.

A little bird told me that people are trying to organize a BAN on the 785 and 250D because they do not track 9600 systems?! Is this true?

I also heard that people are organized to file a class action suit against a well known scanner software company over something really assinine - what is WITH the scanner community these days?

Please tell me these rumors are just that - rumors and nothing more. If we ban the digital radios then Uniden will probably not bother making the one we really want, since there is obviously "no market for it". Don't be stupid - don't blow it now that we've come so far.

As for the software company, with the plethora of really good free software available plus the number of people on this group (GARY) who think software is meant to be stolen and shared I predict that this particular company will go on to another "market segment" anyhow. Just about all of them have.

This auction is for a Radio Shack Pro-70 handheld scanner. This scanner is in good shape, rated at a 7.5 on a scale of 1 - 10. There are minor scratches around the scanner, but the keypad markings are perfect. The display and light work fine and the scanner functions 100%. I am selling this because I just bought a Pro-93 and no longer need the Pro-70. Included with the Pro-70 is the stock antenna, carrying case, Radio Shack 9v 300mA power supply (wallwart) (part #273-1665) and Radio Shack nickle-cadium rechargable battery (part #23-288-b) with external charger (part #23-288-c). The battery can either be charged in the scanner with the included power supply or in the external charger.

welp, there are people suing McDs because their kids are fat - my
x-girlfriend sued a company that makes the little slipcovers that lace
over your steering wheel- she lost control of her daddys' Porsche when
her hands *slipped* off the wheel.

Fer crying out loud, States are suing Microsoft instead of just buying
better software - lots of frivolous lawsuits out there.

>Please tell me these rumors are just that - rumors and nothing more. If we

welp, last I heard I was #49 out of some 200 785s preordered at just
one small retailer, quite a market IMO. I would think Uniden would be
a lot more concerned with blowing off it's retail network than a few
tits and a lawyer

>go on to another "market segment" anyhow. Just about all of them have.
>

Yep, Bill Gates sure lost his his butt betting on that funny Altair
thingy, eh?

Todays fringe hobby is tomorrows 100-billion dollar industry (or
doesn't anybody remember when a paper scanner was a gizmo you clipped
onto an Imagewriter? ;)

It behooves companies in the telecommunications software industry to
keep their fingers in as many pies as practical - never know WHAT will
pay off.

5550. 780xlt Computer Interface

Newsgroup: rec.radio.scanner
Date: 2002-12-03 19:42:39 UTC
From: martin@okstate.edu
Message-ID: <asj1ffhjn1@hydrogen.cis.okstate.edu>
Source record: 40987

Does the computer interface on the Uniden 780XLT control the type
of CTCSS for each channel as well as the frequency?

As a potential user of this system who happens to be blind, I am
asking what functions can be controlled via the serial port and whether any
information is returned as to status via the serial port.

The LCD readout isn't of any use to me at all, but that is not so
much of an issue if the serial port can be made to tell me what frequency
the scanner is on, etc.

I plan to use this scanner connected to a Linux system and I do not
mind writing programs so as long as I can find the specifications for the
serial interface, I should be able to make it work.

Thanks for any practical information anyone might have.

> In my condo complex there is a "no external antenna" policy. So I have
> two choices for my scanner antenna.

Which is more important to you, signal quality or broad frequency coverage? If it's signal quality, go with the disguised outdoor antenna. An article I read in Poptronix not long ago pointed out that when you put an antenna outside, you're simultaneously attenuating noise from the electronics indoors and are no longer attenuating the signals you want to receive. So, not only is your received signal level higher, but the noise level is lower, so your signal-to-noise ratio is much better. This is a strong argument in favor of outdoor antennas.

The problem is, it's hard to find a wideband antenna design that'll fit in a piece of PVC pipe. If you need wideband coverage and are willing to sacrifice some signal and S/N ratio for it, you should set up something like a discone in your storage space. The walls of the storage unit will block the noise from your indoor electronics to some degree, but they also block the signals you're after, too, so it'll work better than an indoor antenna, but not as well as it would work outdoors. It'll probably be just fine for you unless you're really chasing after some weak signals. I use an indoor discone in the same room as my RFI generators (a.k.a. my computers) and I seem to do just fine for local signals. Still, I long for the days when I rented a house and had an outdoor antenna...

For what it's worth, just about every external computer-controllable scanner uses a serial port (which may or may not require a simple "level converter" to translate between the RS-232 voltage levels on a standard PC serial port and TTL voltage levels). The control protocols are usually pretty simple and are frequently available on the net. I've played around with direct control of my AR-5000+3 (hooking it to a serial port and manually typing the commands in a terminal program) and it was quite easy to do and worked beautifully. No third-party or OS-dependent software was required, and the control protocol was documented in a small, separate manual that came with the scanner.

Sorry - 9600 baud digital control channel APCO-25 compliant Motorola trunked systems.

The ones most of us have within stone throwing distance are analog 3600 baud Motorola trunked or EDACS, by comparison.

My city is testing their new TRS and it's 9600 baud... pthththh! But the county is using a 3600 baud type II hybrid with digital and analog comms... shweeeeeeet... Scannerdom awaits it's digital messiah... ha ha ha

Depends on your area and how 'willing' the local gov is for springing for digital changeover. Changing all the equipment can be costly, for them and us.

Who's really winning here? Motorola? Just taking a cheap shot at 'em. :)

If it is like cell, and what I was told, one channel of analog can hold 10 channels of digital. So I ask (if that is true), why was digital more expensive at first introduction. I mean the businesses were capable of handling MORE customers with the same 'bandwidth'. They should have offered an incentive to make the analog to digital switch vs make it a costly 'upgrade'.

==OUCH, hey don't push me off my soapbox!

Sorry, my mind wandering again.

You could use an antenna switch, but that would only connect one radio at a time. I presume you want to use all three radios at once? That might require an active circuit to isolate the receiver inputs from each other.

Designing and producing chips is extremely expensive business. CPU
factories can cost in the hundreds of millions to build and are obsolete in
just a few years. Economies of scale are important: when a new technology
first arrives the first users have to pay a premium. Once everybody sees
how nicely things work they start to buy more, which means that more are
produced, which means that the prices can go down.

5572. Question/problem - AOR AR-5000+3

Newsgroup: rec.radio.scanner
Date: 2002-12-04 01:06:04 UTC
From: cleit273@aol.com
Message-ID: <20021203200604.04176.00008804@mb-mo.aol.com>
Source record: 40908

Hi,
I just purchased an AR-5000+3 two weeks ago, and overall, I'm very happy with it. However, one thing I did notice is that right-side removable support foot seems to be tilted more to the side than the left one. From pictures I've seen of various other AR5k's, the sideways tilt of the feet seems to vary from straight to tilted. Is this symptomatic of AOR's build quality issues that I've read about? BTW, I bought this receiver new from Universal Radio, and it arrived double-boxed with no shipping damage at all,and it performs superbly, which leads me to believe that what I have noted is a manufacturing flaw.

Thanks for any help with my crazy? question!

I live in North Central Oklahoma about 50 miles from either Tulsa
or Oklahoma City depending upon whether you go East to Tulsa or South to
OKC, but the vast majority of the cell phone signals here are now digital.
A totally unblocked scanner doesn't do much for you except buzz while the
readout displays the forbidden frequencies.

You can only hear the "hotshot channel" which is still analog. I do not have the frequency at the moment. Perhaps another reader can post it for you. The hotshot channel will broadcast all serious dispatches in all areas of the city. You only will hear the dispatch, and not any officer responses. I am waiting for the Uniden digital radio to come out in a few months so that I can hear LAPD like I used to.

5578. tk2 v0.7 open source software for ICOM IC-R2 available

Newsgroup: rec.radio.scanner
Date: 2002-12-04 01:42:44 UTC
From: "Bob Parnass, AJ9S" <usenet2@parnass.org>
Message-ID: <3ded5bed$0$17648$1dc6e903@news.corecomm.net>
Source record: 40915
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave

tk2 version 0.7 is now available for free download.

tk2 is open source, multi-platform software which configures the
ICOM IC-R2 wide coverage receiver. It runs on Linux, MacOS X,
BSD, UNIX, Windows (95 and later), and other operating systems.

Changes in version 0.7 include:

1) Memory bank channels may now be edited within tk2. Channels may
be changed, deleted, inserted, or swapped with adjacent
channels. More comprehensive changes can be made by exporting
the channels to a CSV file, then using a text editor or
spreadsheet program.

2) Added a duplicate frequency check.

3) Fixed a bug which truncated interstitial frequencies,
e.g., 470.3125, and showed them without the proper last digit.

You can learn about and freely download an experimental version
of tk2 from:

http://parnass.com

I don't warrant the software, though it will cost you nothing.

Thanks to BlakkeKatte@yahoo.co.uk for publishing detailed
information about the IC-R2 protocol and memory layout
at http://uk.geocities.com/blakkekatte. Thanks also to Les Butler,
Thor Heglund, and other IC-R2 owners for helping to test tk2.

Source record: 40922

why don't you just try a normal cable spliter? you can get f to bnc converters. you may get clocking noise generated from the scanners depending on the scanner you use. I put just a bnc T connector in line with mine to hook up two bearcat 300s. was getting clock noise when scanning the banks but was clean for just monitoring one freq on each. you may get good results with a different type of scanner. two bnc T connectors would only be a couple of bucks.

So you are willing to trade all of your CD and DVD equipment for my VHS and
cassette?

If it is done properly (big if), digital can be far and away superior to
analog.

In the words of (the digitally remastered) B. Bunny, "what a maroon".

Until Uniden's digital scanners come out in a month or so, you're right.
The only analog frequency in regular use is "Tac 1," 154.83, on which
they broadcast all "hot shot" in-progress calls and also use it to call
citywide units such as K9s and air units.

BTW, LAPD dispatchers ("RTO's" technically, Radiotelephone Operators)
have started moving into the new Metropolitan Dispatch center as of
today. See the place at
http://www.snowcrest.net/marnells/lapd-mdc.htm

Info on the Uniden digital scanners at
http://www.snowcrest.net/marnells/digital-scanner.htm

Ontario Unlisted Frequency Guide is dedicated to scanner radio
hobbyists who are
frequency hunters. You will find lists of Ontario radio frequencies
that are
not listed on any web page, published in any scanner book (Haruteq or
Scantrix)
or listed in the government frequency list (Industry Canada's TAFL).
This list
is all based on research and the patience of the people who contribute
to this web page.

5602. Looking for frequencies from Massachusetts to Ohio

Newsgroup: rec.radio.scanner
Date: 2002-12-04 13:04:46 UTC
From: "Terry M. Stader" <ka8scp@wb1gof.org>
Message-ID: <3dedfce5$1@news.concord.com>
Source record: 40942

Greetings all....

I am headed to Ohio (Lucas County) from the northeast portion of MA and am looking for the frequencies for the variou police agencies as well as highway departments to keep tabs on road conditions and accidents, etc. I plan on using the NY Thruway (I-90) on the way out and then coming back the "southern" route via I-80, I-81 and I-84 back to the Mass Pike.

If any one can assist... that would be great. Sure I have the scanner guides and they tell me the state police frequencies... but they do not substitute for the resources of the locals who are tuned in daily and know what is real versus what is published!

Looking for:

Outbound:
Mass Pike - I have most of these from a great site:
http://lynx.dac.neu.edu/s/stjohnso/ematrunk/msp/mspconv.html

NY State Thruway - my guess is 453.425 and 453.525 (PL's ???). Are there others?

Pennsylvania - I-90 (need help here)

Ohio - I-90 section (District 4?) guessing 44.98 base/44.82 mobile? Ohio Turnpike is 155.685 & 155.79 for Highway Patrol. 158.985 &159.165 for maintenance and ops, right? Using the ScanOhio site for this:
http://www.scanohio.com/statewide/index.html Excellent site!

Inbound:
Ohio - covered above...

Pennslyvania - Turnpike? Using
http://www.fordyce.org/scanning/frequencies/Pennsylvania/paspd.html I see lots of frequencies... suggestions? I-81 in the Scranton area, then I-84.

NY - I-84 Port Jarvis to Newburgh area

CT - still I-84 Danbury through Hartford up to the MA border

MA - I can handle that one.

I'll try and repost the compilation when I get it put together.

Thanks all for your support.

Terry

---> Here is my reply to what Mark wrote 12/4/02 7:33:08 AM

That being true or not, analog is being phased out, and trying to be pushed out. I heard that they are or have moved the time frame up to totally be out of analog cell phones.

Now, does anyone know how to modify my 8 track tape player to receive cell phone calls :)

I just made a post in another thread about it. Digital phones sound like crap compared to analog. Digital signals are way overcompressed in my area so they sound like the worst mp3 you've ever heard (warbly).

Maybe it's better where you are, but the only way you couldn't tell the difference in my area would be if you were stone deaf.

Bwahahhahahahahaaaa!!!

Oh DAMN I wish I had thought of that first...

I've seen old analog cell phones like this at thrift stores for as little as
$5... just passed them by. If I had only known that some idiot would pay
$201 for one... what a maroon...

I have the very same condition on my +3 as well. But I haven't taken
the time to investigate if it's a problem with the leg or the hole
into which it screws.

Is this a decent scanner for a beginner??

It doesn't look like any local agencies are using trunked systems, so that's not an issue currently.

I can get a used one for about $100.

Ummm, no. Well maybe the MIB's but other than that...

> Is it worth paying $$ to upgrage my scanner to scan to 3Ghz.

About as much as it would be worth upgrading a 1972 Chevy Nova to break the
sound barrier.

>Whats up there.

In Ireland? I have not a clue - whatever governing body issues licenses for
radio transmitters in your country might have such info available.

> I live in Ireland so I dont think we have any trunk systems etc..

You never know - you might be part of the TETRA network - european digital
public safety radio system.. Again, the agency that manages your countries
radio waves would know.

>
> Also the latest scanner does HF.
> Is the signal quality good in HF I mostly listen to AIR and Mil
> transmissions on a radio shack dx 398

I have yet to find a handheld scanner that does as good or better HF
reception than even the cheapest dedicated HF receiver. Of course I don't
currently monitor HF so I didn't care about it enough to go out and buy such
a dedicated receiver. But I'm thinking my new years resolution might be to
rectify that situation. I hear you can monitor all sorts of good stuff on
HF...

I went to

http://209.145.176.7/~090/awh/toc.html

Lots of very good information and my thanks to the authors, but I
am specifically looking for a description of the serial commands for the
780XLT. A click on the link to the RS-232 protocol
yields the dreaded 404 "file not found" error.

Is there a good old ASCII text description of the commands and or
the protocol anywhere right now?

If not ASCII text, html would do. pdf is only good if it is not a
photographic image of a page. Many thanks.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4673&item=1943083935&rd=1

This auction is for an Icom IC-202 2m SSB/CW portable radio . This radio works off of 9 "C" cell batteries or a power supply. It covers 144.000 - 144.400 and includes crystals for 145.000 - 145.200, 145.800 - 146.000. The radio is in fair shape, showing obvious wear, but it works flawlessly. I recently bought this to use is as part of a project that I've since abandoned, so I do not need it. I tested it in the mobile and talked to a station about 10 miles away with a mobile antenna on the roof. He reported audio and signal was good. Output power is about 2 - 3 watts depending on how you power it. It has a telescoping antenna, or you can use a regular antenna by way of a rear PL-259 connector. Included is a hand microphone. Please note: This is NOT the IC-202E or the IC-202S. I am not sure what the internal differences are between these models, but the front panel does look a little different from these other models, but I think they have all the same functions.

5617. FA: Pro-70 50 channel handheld scanner

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4673&item=1943081862&rd=1

This auction is for a Radio Shack Pro-70 handheld scanner. This scanner is in good shape, rated at a 7.5 on a scale of 1 - 10. There are minor scratches around the scanner, but the keypad markings are perfect. The display and light work fine and the scanner functions 100%. I am selling this because I just bought a Pro-93 and no longer need the Pro-70. Included with the Pro-70 is the stock antenna, carrying case, Radio Shack 9v 300mA power supply (wallwart) (part #273-1665) and Radio Shack nickle-cadium rechargable battery (part #23-288-b) with external charger (part #23-288-c). The battery can either be charged in the scanner with the included power supply or in the external charger.

I had an analog phone for years and after the first year or two of digital
(growing pains) have noticed an incredible difference. Part of it, I am
sure, has to do with the cell towers that seem to be growing every mile or
so - many of which are disguised as clocks or, in one case, a giant tree in
the middle of nowhere.

>
I have a Minicircuits ZFSC-2-1 which is rated for 5 to 500MHz.
It passes RF with accepable losses from 200KHz~928MHz.
By acceptable I mean I can couple 2 shortwave radios and hear
almost any signal through it as with it out of line.
From 50MHz-cell freqs the loss is low enough so that only
the weakest mobiles, those that were almost in the noise are
effected. The isolation between ports decreases much
faster then loss as you move out of it's specified freqeuncy range.
For 30~500MHz there is almost no intereaction from one port
to the other.
We are having our first snow/ice storm of the season and it is nice
to have 2 scanners, Pro16 and Pro2004, up and monitoring traffic
nightmare.

My opinion of multi set coupling from worst to best:
Paralleling with BNC-Ts, it will work.
TV spliters, much beter then the first.
Minicircuits, great, low loss, high isolation but pricey.

Terry

I sure do! Thank you.

I only have one last question about the 780XLT. Can it handle
CTCSS signals that are a digital code instead of a steady tone? I am not
talking about the "turkey call" type digital unit ID's, but the sub-audible
frames of data that are used on community repeaters and newer two-way
systems that use what is sometimes call DPL? In my locality, there is a
non-trunked system that has DPL that I want to hear, and a very busy
ambulance dispatch system in Oklahoma City which usually is full-quieting
and uses a standard PL tone that I don't particularly care to hear.

It would be nice to be able to either respond to the DPL on the
local system or cause the receiver to mute on the tone from the distant but
audible system.

You are lucky, I have three antennas from them and none of them work very well, the stock antennas are much better than anything they have, I tossed them in a box for a junk sale.

---------- Original Message ----------

Just tried to buy a antenna from Antenna Warehouse and they are nuts. Talked with someone named Tim who was eating or something and I must have bothered him. He won't ship to my shipping address because it was different from my mail/billing address for Visa.

Thanked him and said good-bye.

The analog service I used to have around here (Detroit area) was absolutely horrible. It was never a question of "a little hiss or static" - it was absolutely horrible. After I migrated to digital the first year or two perhaps one or two calls out of five sounded like I was calling from inside of a can. Recently, though quality has consistently been far better than any of the analog calls, and I can immediately tell the difference if I fall into an analog-only area by the decline in quality.

As always, YMMV.

Ontario Unlisted Frequency Guide is dedicated to scanner radio
hobbyists who are
frequency hunters. You will find lists of Ontario radio frequencies
that are
not listed on any web page, published in any scanner book (Haruteq or
Scantrix)
or listed in the government frequency list (Industry Canada's TAFL).
This list
is all based on research and the patience of the people who contribute
to this web page.

Doesn't the radio run fine on the 4 internal alkaline/NiCd/NiMH
batteries? Should run fine with 4, or at most 5, external batteries?
Give it a try with some external batteries.

Walt

Russ;
Currently I'm running 8 scanners off one antenna and 4 more scanners off another antenna. I'm using the Stridsberg Amplified couplers. I wrote and artical about running more than one scanner from one antenna on my website. You can read it (complete with pictures) at http://www.milaircomms.com/review_stridsberg_mca204.html

Also you can see the entire shack at http://www.MilAirComms.com/shack.html

There are many dealers who will not ship to an address other than your billing address. This is for their protection. I run several onLine websites, in 2000 I got stuck with about $23,000 worth of charge backs because I shipped to a different shipping address verus billing address.

In 2001 I refused to ship to different address other than the billing address, only got charged with about $2,000 worth of charge backs. I think you can see why a greater number of businesses do it that way. Communication Electronics Inc. (usascan.com), one of the best sources for the BC780 is one off the top of my head that will no longer ship do addresses other than billing.

Regarding my experieces with AntennaWarehouse they all have been excellent. Over the last couple years I've ordered 2 discones, 1 ScannerBeam and 1 ScanTenna from them. All antennes arrived at my door in less then 4 days from ordering, all antennes preform excellent. Not to mention that AntennaWarehouse charges a lot less then Grove for the very same antenna. Now I have ordered from Grove before and have NOTHING good to say about Mr. Grove. All orders (3 in total) screwed up, poor customer service and slow delivery times not to mentioned overpriced....

Thanks for the input.

My billing address is my POB and my shipping address is my home or
my other shipping address down south is my office.
What can I do. I own two little business and I get stuff shipped to
me every day.
I was already mad because the guy was eating and I couldn't
understand him.

Message-ID: <asmo53$s3nh2$1@ID-59690.news.dfncis.de>
Source record: 40891

Ok I know that say the Pro-95 from Radio Shack has LOTS of channels but ....

There was talk previously with the Palms and a cable to program and such. One problem was varying voltages on different manufactures from Handspring, different Palm models etc. My question is now with the Pocket PC 2002 such at the IPaq, Jordana, Axim, Toshiba etc. Has there been any talk of interfacing these to radios? I used to have the Icom PCR-1000 setup with a Palm but there are lots of power in the PPC units now.

I used to love the Talk PCR on the PC with the PCR-1000. Can a PPC run this if interfaced?

Heck for that matter, now with serial connections, can we connect PPC units now? Are serial ports standardized with voltages now?

I've always been fascinated by the special Radio Room clocks used in shipboard radio shacks. The original springwound Chelsea model used since 1939 is still made and retails for $786.00. Antique originals are going for even more. So I adapted the design and made my own inexpensive plastic version, manufactured by CafePress.

Don't worry about it. Ebay sent me a BS notice because I posted a FA
message in one of the newsgroups. I guess some lowlife moma's boy
complained. I am not sure if it was because of one here or not, but I
told Ebay to put up or shut up. Either they forward a copy of the
complaint to me with a specific violation, and show that they
investigated the violation to determine the validity, or they don't
fill my mailbox with the crap they sent me. So all in all, it's ok to
post FS/FA stuff here as long as it isn't too often, like twice a day.
I'll usually post any scanner related auctions once every 24 hours
max.

Evidently the acceptable voltage range for the PRO-95 is pretty wide (depending where the voltage is applied). A 9v external supply works fine. Four AA's (4 x 1.5 = 6v) works fine and four 1.2 NiMH cells (4.8 v) work OK. The radio comes supplied with two battery holders--use the black holder for non-rechargables, use the yellow holder (which comes cleverly concealed in what looks like the radio's packing material--be careful) for NiCads or NiMH.

Unfortunately this has become a common practice. But having recently been a victim of attempted credit card fraud, I am now more in favor of these methods than ever. Some asshole tried to use my card number for $2500 worth of stuff, but the credit card company flagged it before it became a problem...so at least some of these anti-fraud practices are working.

Sometimes merchants only require the first purchase to be shipped to the same address, then later purchases can be done differently.

That would depend entirely on the regulator design. A standard low-cost voltage regulator circuit may need a few extra volts to ensure proper regulation under load. It is possible that you don't need all 9V for it to work properly, provided that the external voltage is stable (like with an AC adapter), but the problem would be that as the external batteries disharge, the voltage will likely drop below the required margin unless you match the nominal voltage requirement of 9V. Some simple bench tests with a variable DC supply would be all it takes to determine that range.

Yes. It's in the manual. Page 56 for V 1.00, page 47 for 3.25 or
3.28.

You lock the keypad by pressing Func, then key/lit. You unlock it by
the same combination.

Are you assuming that because the internal holders provide 6V
(alkaline) and 4.8V (rechargeable) that the same voltages will be OK
at the external jack? I have found that this is not always the case.

Or did you test with a variable external supply (which I do not have)?

There's always talk.

If you have a PRO-95 and a Windows CE based PPC, you might see if
Win95 will work.

I doubt if voltages on these devices will ever be standardized.
Voltages are whatever suit the design of the PPC or scanner.
Conversion to RS-232 is done in the cable. RS's three computer
programmable/readable scanners - the 92, 93 and 95 - each have
different voltages. But as long as you've got a PC-to-PPC cable and a
PC-to-scanner cable, they can be joined to handle the voltages.

While I empathize with the vendor and don't want to become a victim of
identity theft, I have experienced the same frustration.

We do not have home mail delivery where I live so all mail must go to
a PO box. Any merchandise mailed to me must have the PO Box on it.
Some vendors insist on getting a street address and then mailing it to
the street address. The Post Office returns it if there is no PO Box
on it.

Then I recently had a vendor ship a package via UPS to my PO Box. UPS
doesn't do that! So that package got returned to the vendor. It took
over eight weeks to get this whole mess straightened out, not to
mention multiple charges and charge reversals to my credit card.

The people taking orders on the phone have to take the time to clearly
understand customer questions and requirements.

I'll step down off my soapbox now.

Ahh yes, the return of George Fetter, fraud and the AntennaWarehouse
head shill.

If you want to piss off Tim at Antennawhorehouse or his shill George
the Fraud just ask him to back what he posts on his site or used to
post on here. Tim and George the Fraud his shill are both liars. Tim
makes claims he refuses to back and George parrots them on his web
site. What a pair.

BTW, when did Antennawhorehouse change their web page and remove some
of the lies they had been telling about the goods they sold? Odd, Tim
used to say his scanner beam performed better than antennas costing
many times more. Why has that been removed Tim, George? Telling the
truth for a change? Are you going to try and be honest now?

5678. tk92 v0.2 open source software for PRO-92 PRO-2067 enhanced

Newsgroup: rec.radio.scanner
Date: 2002-12-05 16:46:00 UTC
From: "Bob Parnass, AJ9S" <usenet2@parnass.org>
Message-ID: <3def810b$0$1454$1dc6e903@news.corecomm.net>
Source record: 40818
Cross-posted to: rec.radio.scanner,alt.radio.scanner

tk92 v0.2 is now available for free download. tk92 is open
source, multi-platform software for configuring Radio Shack PRO-92
and PRO-2067 scanner radios.

I wrote tk92 chiefly for radio hobbyists who use Linux, MacOS X,
BSD, Solaris, Unix, or other non-Windows operating systems.
tk92 works on Windows-based systems (95 and later), too.

This version contains several new features but may run more slowly
or not at all on computers without sufficient RAM.

New features in tk92 v0.2 include:

1) Memory bank channels can now be edited within tk92. Channels
can be changed, deleted, inserted, or swapped with adjacent
channels. More comprehensive changes can be made by
exporting the channels to a CSV file, then using a text
editor or spreadsheet program.
2) Talk groups can now be changed within tk92.
3) The 10 weather channels can be reprogrammed to custom frequencies.
4) tk92 now opens the serial port just before reading from or writing
to the radio instead of when the program begins. This means
you can wait to connect the radio until just before performing
a data transfer.
5) A priority channel can be assigned.
6) The backlight can be set to stay on until the PRO-92 is powered
off by setting the backlight timeout to 0 seconds.
7) The mode defaults to FM if not specified when importing memory
channels from a CSV file.
8) A bug in encoding the 4-line Welcome message has been fixed.

Thanks to Ken Plotkin and Bill Petrowsky who determined and
published the PRO-92 and PRO-2067 memory image layout, with
corrections from Don Starr. Bill suggested implementing
preprogrammed fleet maps in Win92 and I incorporated them
into tk92, as well. Steve Falco published the source
code for his 92linux command line based software, written
in the C language.

Thanks also to Greg Shepherd, Ryan Schave, and others for
helping to test tk92.

tk92 is undergoing active development. You can learn about and
freely download the latest beta test version of tk92 from:

http://parnass.com

I don't warrant the software, though it will cost you nothing.

Ken,

Note my parenthetical in my first line "depending where the voltage is supplied." All I meant to point out is that the PRO-95 is designed to accept a variety of voltages at the points where the manufacturer has designed the radio to work with each voltages. I presume the low voltages will not work well if at all at the jack, but I haven't tested the low voltages at the external jack--just the designed-for voltage. . I CERTAINLY haven't tested. 9 volts through the battery compartment, but I would definitely not recommend it At the battery compartment , either 6 or 4.8 are OK.

Needing help with the Sullivan County system .... have the talkgroups codes
and I think the correct frequencies.

Just cannot get unit to track

Thanks

Chet

>

Oh Glennie,
I'll back up what was said in my review of the ScannerBeam. Its
performance DOES without question rival beams costing MANY times more.
Now, you want a NAME??? I have a Create Log Periodic at the same
altitude using the same coax (75i¿½ of RF-9913) as the ScannerBeam.

Guess what, both antennas receive just about the same. Very little
difference, in fact on 900 MHz the ScannerBeam (by
http://www.AntennaWarehouse.com) BLOWS the Create away! On the Create
I can not receive the Orlando, FL trunk system 50 miles away but on the
ScannerBeam it comes in very well. On MilAir freqs its nearlly dead

even on performance.

The Create cost me $300.00, the ScannerBeam cost $56.00 and both perform nearly the same in all freqs monitored except 900 MHz where the Create UNDERPERFOMRED big timeï¿½..

If you want to see for yourself you are more than welcome to come to my place and you can run the tests yourselfï¿½..

Antennawarehouse never said the ScannerBeam performed better, the quote was "ScannerBeam rivals the performace of antennas cost many times more". The word "rivals" does NOT mean better. But then Glennie likes putting words in other peoples mouth....

The only fraud on this group is Gleenie, just ask the Tacomo City Tax officeï¿½.

George

[snip]

If it's only posted to one or two groups, it's not spam.

Spam is posting the same message to many groups. Not just crossposting, but posting the same thing. It's what those immigration lawyers did back in the early 90s.

The days when it was forbidden to post an ad on usenet ended when NSF ended its ownershjip of the backbone. In lots of newsgroups, posting a single notice of something for sale is considered acceptable.

This seems to be one of those groups. Personally, I like the sale announcements. I've only bought one scanner that way, but it's nice to see what the stuff is worth.

>It's much easier to just build filters for "FA:" and "FS:" if it bugs people
>so much.

IMHO, having FA or FS in the subject takes care of disclosing that it's an ad. And, as you point out, it lets the folks who genuinely don't want to see such posts filter them out.

Then there are those who complain to ISPs without any basis, but sometimes cause grief. I remember a huge flame war here a few years back, where the innocent party got his connection canceled because the instigator fabricated a convincing complaint to the ISP.

Or in case any other "idiot" decides to "grab" or "touch" the output, or in any other way accidently place a charge or some static electricity on the output.

So, in other words, it is far better to be safe and have the cap installed, than be an "idiot" and have the IC blown because your mate didn't know what it was, or your kid played with the scanner......

If all this is true George, why then did Tim refuse to back the claim he made on this newsgroup? Instead he left the newsgroup in his shills hand, George Fetter. Why when he claimed to have spent a summer testing did he refuse to reveal which antenna he tested George?

Your above test means squat because it is you who installed the antennas and worse yet you doing the supposed test. Don't need your worthless evaluation George if Tim came clean with the tests he claims to have spent a summer performing.

> Antennawarehouse never said the ScannerBeam performed better, the quote
> was "ScannerBeam rivals the performace of antennas cost many times

> putting words in other peoples mouth....

Why then did Tim refuse to reveal the antennas he was claiming his rivaled George? Why has he finally removed this claim/lie from his web site? He has George the Shill now linked to the ad on his web site. Let George lie for him. BAWAHAHAHAHAHA!

> The only fraud on this group is Gleenie, just ask the Tacomo City Tax
> office.

First George, I have never committed tax fraud. This just shows again what you are made of. You can't back you bull shit George so you change the subject and lie. All this started so long ago when I asked Tim, which antennas did he compare his beam to. He couldn't answer. He ran and hid. Give it up George.

So here is a change of subject George and I don't have make up a lie like you. When you going to file suit against me you freak. You called me up on the phone, screamed I would hear from your lawyer and then took a cheap shot at my wife. What about that George? Speak up little man.

been booted off ebay twice -- what a hassle ....

This is a Realistic PRO-34 200 Channel Handheld Scanner!
These hard to find scanners are excellent for
any application, and the functionality and portability is
incredible. Comes complete with 200 programmable channels that cover a broad range of
frequencies:

30-50 MHz (VHF Lo)
50-54 MHz (Ham Radio 6 meter)
108-136 MHz (Aircraft)
136.005-144 MHz (Government)

144-148 MHz (Ham Radio 2 meter)
148-174 MHz (VHF Hi)
380-450 MHz (Ham Radio and government)
450-470 MHz (UHF Lo
470-512 MHz (UHF TV)
806.0000-823.9375 MHz(UHF Hi)

851.1125-868.9375 MHz (UHF Hi)
896.1125-960.0000 MHz (UHF Hi)

Included with the scanner is the original
flexible antenna, owner's manual, builtin charger for nicads
This scanner is used, has scuff marks on the surface and is missing the belt clip,
but nothing that affects the functionality. This scanner
will pick up baby monitors,
police, fire, ems, aircraft, mobile and ham radio,
cordless phones and Cell
for more information on these frequences search the web for Pro-34 & see for yourself
This scanner has been modified for extended range ...

asking 90$US / 150$CND + shipping
will ship world wide

No - I'm just recalling the original definition of spam.

Here's an article in Wired about the event that started it all:

http://www.wired.com/news/politics/0,1283,19098,00.html

and a page at a law school tracing it back to the same origin:

http://www.unc.edu/courses/law357c/cyberprojects/spring99/spam/what.html

and a song dedicated to the perpetrators:

http://www.freemars.org/filk/cancer.html

and an interview with one of the pair:

http://news.com.com/2008-1082-868483.html

The definition of spam has widened since then. But not so wide that
it's fair to call one or two on-topic FS/FA posts to a couple of
newsgroups spam.

I don't know about a.r.s, but r.r.s should have a charter. What does
that say about one-shot commercial posts?

Ken Plotkin

That's not it. Perhaps it's not an FCC database but it is on the web
somewhere and I have seen a URL to it posted at one time.

The URL provided only allows you to find licenses for AM, FM, TV, LPTV, and
DTV broadcast stations. The site I'm asking about allows you to enter any
frequency from the lowest to the highest and display results about the
frequency.

5713. Re: What's the URL to that FCC database or whatever it is?

Source record: 40753

I found what I was looking for.

It's the FCC's Advanced License Search found at
http://wireless2.fcc.gov/UlsApp/UlsSearch/searchAdvanced.jsp

Just type a frequency in the "exact frequency" box and it will return a
list of all licenses for that frequency.

Here's an example: Enter 506.5375 in the "exact frequency" box and it
returns these results:

Specified Search
Frequency Assigned = 506.5375
5 Matches (all results displayed)

Call Sign Licensee Name FRN Radio Service Status Expiration Date

1 WIJ784 MANTUA, TOWNSHIP OF PW Active 02/28/2004
2 WIJ807 LOS ANGELES, CITY OF 0001536242 PW Active 01/01/2006
3 WIL731 BORDENTOWN, TOWNSHIP OF PW Active 06/23/2004
4 WIL868 LOS ANGELES, CITY OF 0001536242 PW Active 01/01/2006
5 WPRJ338 LOS ANGELES, CITY OF PW Active 10/12/2005

Clicking on one of the call signs brings up info such as Transmitter
Locations and other interesting info.

I've just installed Win95 to use with a Pro-95 scanner. First thing I noticed is that all 1000 channels are unlocked in the program. Seems to me I would have to manually lock all unused channels before uploading to the scanner.

They should all be defaulted to locked, shouldn't they?

I wanted to write a note to the author, but can't find a link.

Message-ID: <ZKVH9.57693$%r6.54484@nwrddc02.gnilink.net>
Source record: 40758

Find the lowest voltage the radio will operate. The key is you want Nicads or MiMhs to be "Dead" at about 1 volt per cell. You want the radio to stop working about when the batteries are roughly at 1 volt per cell.

Say if this voltage was 6 volts, you use would use 6 Nicads. This will yeild a 7.2 volt pack.

What happens if you put too many Nicads? If you were to put 8 (9.6v) nicads into your radio that dies at 6 volts, then the nicads will drop well below 1v per cell. Not all Nicads are equalized, some will drop far further than 1v and you run the risk of reverse charging your nicads. This causes damage to nicads and shortens their life.

In article <3dee5ef8.85016296@news-server.optonline.net>, cprstn54zz@att.net says...

I think the assumption is, if you're putting it in there, you want to
scan it. If you want to L/O ir un-L/O all the channels in one bank in
a single click, just click the top of the column where it says "LOut".
This will toggle the lockout flag on all the channels in that bank.

5722. Ghetto Pro-95 data cable. HAW!

Newsgroup: rec.radio.scanner
Date: 2002-12-06 06:09:44 UTC
From: l33tN3w$P0$t3R <3y3H4x0r@Y0uRB0X.com>

Well I finally got a cable to work with the Pro-95 or at least for uploading I did.

After trying with just a basic serial cable and trying the same cable with a stereo to mono adapter, it seemed I was out of luck.

For some reason though I decided to clip the original plug off the serial cable and replace it with the plug of an old pair of sony headphones I had. Doing this and combining it with the stereo to mono adapter allowed me to upload frequencies to my Pro-95.

This is good for right now, but I'll probably end up getting one of the cables from Pro-95.com so I can download also.

I always put a post on here and the other radio groups if I have a radio on
ebay, I never had any problems with my ISP's, besides anyone who doesn't
want to read it can always block the message, easy enough
good luck with your auction.

GLENN - PUT UP OR SHUT UP!

You keep saying that both George and Tim are liars however YOU have yet to offer once ounce of proof to back up YOUR claims!

George at least did tell us what antenna he tested the Scanerbeam against, he took the time and I have to believe him as he as picture of both antennas on is website. You can tell by the photos that both antennas are NOT from an advertiser pictures and are from the same house.

So Glenn, where is the proof that George or Tim are a fraud? I see proof to the contrary but yet to see proof backing YOUR claims.

I too have bought from both Tim and Grove. Only ordered once from Grove. Grove sent me the wrong filter, I called and they were nice on the phone. They asked me to return it and the would send the correct one. Ok, I returned the old one but NEVER received the correct one. Three phone calls later got nothing but lip service but no filter or my money back. Had to file claim with my credit card co.

My point was, it all the L/O blocks appear white, which I assume means they
are un-checked. Therefore if I entered 10 frequencies in a bank and uploaded
the bank, the scanner would see ALL channels in that bank as unlocked,
therefore
it would scan a bunch of empty channels. On the other hand, maybe the
scanner doesn't allow an empty channel to be unlocked. I'll have to check on
that.

What idiot wrote this? Is it not telemarketing either if the telemarketer only calls one or two people? Perhaps it is not junk mail if a company only sends it's unrequested literature to one or two homes?

Spam is the same thing as the physical junk mail you get in your mailbox, the only difference is that Spam is in an electronic binary form instead of printed on paper, and comes to you through your computer instead of your outdoor physical mailbox.

Amazing that this has to be explained to someone who can use a computer.

Speaking of explaining things to people who can use a computer, you need
some explaining to yourself. Do you know the origin of the term spam?
It came from a Monty Python skit in which Vikings drowned out others in
a restuarant by repeatedly saying "Spam, spam, spam". Mass email came to
be known as spam because it drowned out other conversations. A single
newsgroup posting can hardly drown out conversations now can it? As a
result, I would agree that posting about an scanner being auctioned in
scanner-related groups is not spamming. It may be off-topic (though
personally I don't think so), it might violate the newsgroup's charter,
it might be or do a host of things. But, its hardly spam.

Roger, here is Tim's claim:

From: Antenna Warehouse (nospam@cis.net)
Subject: 4 sale Log-Periodic Scanner Antennas
Newsgroups: rec.radio.scanner
Date: 2001-10-02 19:18:26 PST

Hi,

We now have log periodic scanner antennas in stock for $63.70
shipping
included. These antennas were specially made for us, and after
extensive testing over the summer were found to have performance that
rivals that of logs costing many times our price.

They can be view in the Scanner Antennas / Base Antennas directory of
our website at:

http://www.antennawarehouse.com/

Thank you

Tim

Antenna Warehouse
811 9th Ave.
Camanche, IA. 52730
563-259-0840 10am-5pm cst Mon-Fri.
Email: sales@antennawarehouse.com
http://www.antennawarehouse.com/

Now Roger, why would such a straight up company refuse to reveal the antennas they claimed to have spent a summer testing. I have to say though, Tim removed the summer of testing claim from his Web Site and also the I can't find his 3db gain discone claim. Now if he could only explain a log that can't transmit on a frequency he claims it covers he might be getting some place. Doubtful. The summer claim was replaced with a link to George the shill Fetter's website. George says Tim told him the names of the antennas tested but he can't revel them. George also called me up on the phone and said I would hear from his lawyer if I called him a fraud again. George then explained that all antenna companies put their specs on the web and using those specs was the same as testing them. He ended the conversation by making a remark about my wife before he hung up.

The fact that George heard a frequency better on one antenna than the other means very little. First problem, George was doing the test. Also it was one frequency. I doubt George is even capable of pointing an antenna without help.

BTW Roger, I am not defending Grove, they are a bit over priced and I am sure some body some place in the world has had a problem with them. In past years they always answered my questions honestly. I have never seen Grove advertise stuff deceptively either.

> It came from a Monty Python skit in which Vikings drowned out others in
> a restuarant by repeatedly saying "Spam, spam, spam".

No, actually that skit came from a product of canned meat called SPAM. But we are talking about the COMPUTER definition of SPAM here now.

There are many words in our language that are spelled the same and have different meanings. Go to the library and look through a dictionary and you will see that this is true.

This is no different that when people on the computer use the word "bandwidth" for a different definition that what the word means when relating to bandwidth of frequencies in a coaxial cable rather than how many posts are in a newsgroup.

Or the word "troll"

But back to the COMPUTER/INTERNET definition of SPAM, it has nothing to do with Monty Python.

> Mass email came to
> be known as spam because it drowned out other conversations.

No other conversations are being drowned out, they don't have any volume. Just as junkmail in your other mailbox outside your home does not "drown out" the mail you want, it comes exactly the same way.

> A single
> newsgroup posting can hardly drown out conversations now can it?

No, all posts are at the same volume level. The difference is that the SPAM is a post nobody on that newsgroup wanted to read, it was just an advertisement.

See, one reason that the word SPAM was actually used, is that not many people like the meat product SPAM. (That is why the Monty Python bit was considered funny. If people LIKED spam, then it would not have been very funny, would it have?) Not many people like JUNK MAIL, so on the internet, they called JUNK MAIL : SPAM. Because nobody likes junkmail and nobody likes SPAM. Thus the clever joke appears again.

Now of course there are the FEW people in our society that actually LIKE junkmail and getting calls from telemarketers, or else they would both be illegal. So too there are a few retarded whackos out there that like receiving SPAM in their email, although fortunately I never met one of them.

> As a
> result, I would agree that posting about an scanner being auctioned in
> scanner-related groups is not spamming.

Sure it is. Just as getting an unwanted catalog or other advertisement in your mailbox is JUNKMAIL.
Here is what is stupid. If someone want to buy a scanner on Ebay, they will go to Ebay and do a search for scanners and find it. This way, everyone that wants to buy a scanner on Ebay already knows what to do. Posting SPAM here about something being sold on Ebay (scanner or not) is not needed or wanted here by anybody! (thus it gets the title of SPAM)

If you reply to this post, are you going to reply to it here in this newsgroup, or are you going to post your reply up on Ebay? People on Ebay don't want to hear your stories about scanners, and people here don't want to hear about Ebay. I don't swim in your toilet, you don't piss in my pool.

Here is why NOBODY here would want any info about a scanner being sold on Ebay...

If someone IS looking on Ebay for scanners and see one they want, they don't want everybody on this newsgroup to know about it so that the bidding price will go up when it doesn't have to because if anyone here wanted it bad enough, they would be searching for scanners on Ebay anyway.

If someone is NOT looking for used scanners on Ebay, then I really don't have to explain why they don't want to read SPAM here about it.

So, there is NO PERSON who would want to have SPAM here about stuff being sold on Ebay except the stupid person selling the scanner and is attempting to up the price of the bids by SPAMMING newsgroups, which is not nice to the poor people trying to get a good deal on a used scanner. If the seller has the appropriate reserve on the item, they can't lose. Putting a SPAM here about the auction is only because they are GREEDY BASTARDS.

Now that we got that straight, one would ask why YOU seem to be protecting SPAM on the newsgroup, and that would be because you are a SPAMMER yourself.

The ONLY people that defend telemarketers, are telemarketers. Same here.

> It may be off-topic (though
> personally I don't think so)

Being off topic or not has nothing to do with it. It is an UNWANTED post that no one wants here, thus SPAM.

I can have a post that talks about how I like to shove scanners up my asshole and then put it in my mouth and lick off all the shit on the buttons that came out of my ass. This is related to scanners, and thus is on topic, but it would be SPAM as no one wants to read shit like that or see it on this newsgroup.

> , it might violate the newsgroup's charter,
> it might be or do a host of things. But, its hardly spam.

As a matter of fact, if you come back and reply to this defending SPAM EBAY posts some more, every time you do, you are posting SPAM here.

I will now end my replying to this thread so that I will not be SPAMMING as well. Let us hope you will help end this SPAM thread as well.

Yes, I see your point BUT!!! this is a radio scanner related group, (or at least it is supposed to be) so any post that has anything at all to do with a radio scanner is not Spam. It is of interest to members of the group, maybe not all of them, but it is definitely on topic so to speak.

Garmin Rino just $179.99 - Rino 110 and Rino 120. These GPS devices integrate radio functionality to provide two-way communications up to two miles using FRS channels and up to five miles using GMRS channels.

We are actually talking about the "Internet" definition of spam, and
that definition did come from the skit as I explained above. Your
alternative explanation is interesting, but wrong.

> There are many words in our language that are spelled the same and have

> Monty Python.

Wrong, but let's play along.

> > Mass email came to
> > be known as spam because it drowned out other conversations.
>
> No other conversations are being drowned out, they don't have any volume.

Well, that's certanly clears things up. Are you saying that no
conversations on the Interent have volume? And, if so, do you mean
volume in terms of noise level or quantity?

> Just
> as junkmail in your other mailbox outside your home does not "drown out" the
> mail
> you want, it comes exactly the same way.

But if I go to my mailbox and find one check, two bills, and six
advertising flyers, which do you think I will notice?

> > newsgroup posting can hardly drown out conversations now can it?
>
> No, all posts are at the same volume level. The difference is that the
> SPAM is a
> post nobody on that newsgroup wanted to read, it was just an advertisement.

Ok, now we have your definition of spam. Spam is "a post nobody on that
newsgroup wanted to read". So, let's assume that "nobody" is not a
person, such as Nobody Jones who lives down the street or something.
Let's assume that you mean that not one person in the newsgroup wanted
to read the message. Fine, let's go with that.

> See, one reason that the word SPAM was actually used, is that not many people
> like
> the meat product SPAM. (That is why the Monty Python bit was considered
> funny. If
> people LIKED spam, then it would not have been very funny, would it have?)
> Not
> many people like JUNK MAIL, so on the internet, they called JUNK MAIL : SPAM.
> Because nobody likes junkmail and nobody likes SPAM. Thus the clever joke
> appears
> again.

There's that nobody again. I'm surprised that SPAM (the meat product)
would have survived all these years if nobody liked it. I guess people
only buy it at gunpoint?

> Now of course there are the FEW people in our society that actually LIKE
> junkmail
> and getting calls from telemarketers, or else they would both be illegal.

Not really. I don't think anyone likes paying taxes, and they are not
illegal. I don't know anyone who likes going to the dentist either, and
that remains legal.

> So too
> there are a few retarded whackos out there that like receiving SPAM in their
> email,
> although fortunately I never met one of them.

You have never met a retarded whacko, or just a retarded whacko who
liked receiving spam?

> > As a
> > result, I would agree that posting about an scanner being auctioned in
> > scanner-related groups is not spamming.
>
> Sure it is. Just as getting an unwanted catalog or other advertisement in
> your
> mailbox is JUNKMAIL.

Its fairly easy to decide what is or is not junkmail. If it comes in
your mailbox and you don't want it, its junkmail. I don't like
advertising flyers. If a Radio Shack flyer ends up in my mailbox, I
consider it junkmail. However, I see people in this newsgroup who are
complaining that they haven't received a Radio Shack flyer. Obviously,
my junkmail is not their junkmail. But, since they don't use my mailbox,
our different definitions are not a problem. However, your definition
of spam is "a post that nobody wanted to read". This definition has a
problem in that you have no way of knowing what everyone wants or does
not want to read.

> Here is what is stupid. If someone want to buy a scanner on Ebay, they
> will go
> to Ebay and do a search for scanners and find it. This way, everyone that
> wants
> to buy a scanner on Ebay already knows what to do. Posting SPAM here about
> something being sold on Ebay (scanner or not) is not needed or wanted here by
> anybody! (thus it gets the title of SPAM)

What if you read this newsgroup, are thinking about buying a "type X"
scanner, but haven't thought about looking on eBay, or haven't got
around to it or whatever. Suddenly, you see that not only is a "type X"
being auctioned, but its a unblocked "type X"! In that case, you might
want to read the post. In that case, the post is not "a post that nobody
wanted to read". Hence, it does not meet your definition of spam.
Several posts in this thread have already shown that a number of readers
either want to read, or are not opposed to such postings. Therefore, I
am not sure how any of these messages will meet your definition of spam.

[small snip]

>
> Here is why NOBODY here would want any info about a scanner being sold on
> Ebay...

Are you sure you aren't talking about Nobody Jones? Otherwise, how do
you have any idea what other members of this group want or don't want?

> If someone IS looking on Ebay for scanners and see one they want, they don't
> want
> everybody on this newsgroup to know about it so that the bidding price will
> go up
> when it doesn't have to because if anyone here wanted it bad enough, they

> would be
> searching for scanners on Ebay anyway.

You are making a lot of assumptions that you are not in a position to make. First off, why would you attribute any rationality to eBay shoppers in the first place? Given that items routinely go for more than you can get at a number of online and offlines outlets, that's a bad assumption.

> If someone is NOT looking for used scanners on Ebay, then I really don't have
> to
> explain why they don't want to read SPAM here about it.

Nobody forces them to read such messages. Just ignore them or learn to use filters.

> So, there is NO PERSON who would want to have SPAM here about stuff being
> sold on
> Ebay except the stupid person selling the scanner and is attempting to up the
> price
> of the bids by SPAMMING newsgroups, which is not nice to the poor people
> trying to
> get a good deal on a used scanner.

Again, it is not clear to me how you can determine the wants of all readers of this newsgroup. I certainly don't remember being polled by your or anyone else for my opinion on the matter.

>
> Now that we got that straight, one would ask why YOU seem to be protecting
> SPAM on
> the newsgroup, and that would be because you are a SPAMMER yourself.

Interesting train of thought there. I am not defending spammers, but the practitioners of something that does not meet the commonly accepted definition of spam. Indeed, it does not even meet your own definition of spam since some readers have stated that they want to read such messages and you say spam should be unwanted by everyone. I abhore true spammers and have acted for years to reduce Internet spamming.

> The ONLY people that defend telemarketers, are telemarketers. Same here.

That's like saying the only person who would defend a murderer is a murderer. Everyone is entitled to a lawyer and despite the efforts of Ashcroft, the United States is still a place where people are allowed to state their opinions. If your only method of defending your argument is to cast dispersions on others, it doesn't say much for the quality of your arguement.

>
> > It may be off-topic (though
> > personally I don't think so)
>

> Being off topic or not has nothing to do with it. It is an UNWANTED post
> that no
> one wants here, thus SPAM.

Again, some people want or at least don't mind messages dealing with
scanner sales. While it may be true that "you" don't want them, you
don't speak for everyone.

> I can have a post that talks about how I like to shove scanners up my asshole
> and
> then put it in my mouth and lick off all the shit on the buttons that came
> out of
> my ass. This is related to scanners, and thus is on topic, but it would be
> SPAM
> as no one wants to read shit like that or see it on this newsgroup.

Well, I don't know. Can we have a show of hands of people who don't want
to read messages like this one? Personally, I'd like to hear more about
the anal applications of various scanners, especially as performed by
you.

> > , it might violate the newsgroup's charter,
> > it might be or do a host of things. But, its hardly spam.
>
> As a matter of fact, if you come back and reply to this defending SPAM EBAY
> posts
> some more, every time you do, you are posting SPAM here.

Oh no! Now only Holi gets to post on this topic. Everyone else is
spammer!!

> I will now end my replying to this thread so that I will not be SPAMMING as
> well.
> Let us hope you will help end this SPAM thread as well.
>

This is not a spam thread. Let's be honest for a second. You say that
spam is a post that nobody wants to read. Yet, you have no way of
knowing what everyone else wants or doesn't want to read. What you
really mean is that spam is any post that you don't like. You have
attempted to appoint yourself the moderator of these newsgroups.
Unfortunately for you, these are unmoderated newsgroups.

I was administering a news server back in the mid-90's when the first
well-known spam occured. It was the "green card" spam and involved two
lawyers sending a message to every newsgroup publizing a green card
lottery. The problem with that message was that it was in every
newsgroup. Every time you tried to read one of your subscribed groups,
you saw that damn message. Then there were replies to that message and
soon nearly every group had a green card discussion going on and
drowning out other threads. Hence, the name spam for such postings
(because of the above mentioned skit). Had that message been posted
only to the immigration newsgroups, there never would had been a

problem.

I personally don't mind postings dealing with scanner sales. However, I can understand how others might object. You can argue against such postings and utilize the newsgroup charter (if one exists) and FAQ (if one exists) to try to prevent them. But, to simply declare such postings spam is wrong.

I live in Lodi, NJ and today somethign really weird happened. I was home around 3pm this afternoon when I felt the house shaking. At the same time I heard what sounded like a helicopter but it was really loud, as I looked outside, I see 5 plack or dark green/brown copters in V formation going over the houses at low altitude. I was like WTF!! So I fired up my MVT-7200 and listened to 108-136 and 225-400 but nothing!!

20 minutes later I heard the noise again and this time they flew over the house again the other way. That was it. I heard nothing on Teterboro Airport frequencies, since I live a few miles from it. Also nothing on Newark Intl, JFK or Laguardia frequencies... Than I remembered the SW band but it was too late....

Anyone have any clue what that could have been??!

Thanks in Advance,
Deniz

I did not say "I can't revel". I said I will not reveal because that
was in Tims place to reveal if he wanted do, not my place.

> George then explained that
> all antenna companies put their specs on the web and using those specs
> was the same as testing them.

Nope again, I never said that or anything near that. I highly doubt
that Grove tests the antennas he sells, he mearly gets his gain numbers
from the manufacture.

> The fact that George heard a frequency better on one antenna than the
> other means very little.

Means everthing, after all its listening to frequencies in which the
common hobbies cares about....

First problem, George was doing the test.
> Also it was one frequency. I doubt George is even capable of pointing
> an antenna without help.

Nope, I can't point an antenna, thats why I have a rotor.....

>
> BTW Roger, I am not defending Grove, they are a bit over priced and I
> am sure some body some place in the world has had a problem with them.
> In past years they always answered my questions honestly. I have never
> seen Grove advertise stuff deceptively either.
>

That's funny, I've seen the very same gain number on Grove's page as are
one Tims page but yet you say Tim's a fraud. If you claim Tim's a
fraud then you must say Grove is a fraud as well as the printed numbers
are the same.

Point blank, every frequency range I "listened" using the same setup the
two antennas produced the same results. I choose frequencies which
were far away and freqs that did NOT product fullscale signal strangth
readings as it would be worthless to test two antennas on signals which
both peg the signal meter. I tested the AirCraft range (108-136),
MilAir Ragne (225-400), a few two meter repeaters which were located far
away, and 900 MHz signals using a trunking system located about 40 miles
away. On all but the 900 MHz range the two antennas produced nearly the
same results. In the 900 MHz range the Antennaware house was 2 S-Units
better.

Next time try 138-144 MHz but besure you are in AM mode. You'll find
ALOT of military air-air comms in the 138-144 MHz range. But it will be
100% AM mode. I'll near many transmissions every day in that range.

Occasionally our government likes to try out new biological 'elements'
on regular citizens before they turn it loose on the enemy. I wouldn't
worry too much about it...yet. If you start getting unexplained nosebleeds,
you might wanna check with your neighbors and see how they're feeling.
Hey, good luck with that.

welp, the number of people who enjoy or do a thing has nothing to do
with whether a government makes that thing illegal - more so, the
number of investors who lose money illegalizing something is seems to
be the determining factor

Otherwise herbal medicine, thumper stereos and CB radio woulda been
outlawed too

>there are a few retarded whackos out there that like receiving SPAM in their email,

They still use those freqs for routine stuff when they have
spread-spectrum satellite technology?

why?

I scan VHF and 200 mhz and even when the Blue Angels are in town, THEY
only communicate with the Boeing Airfied Tower on unencrypted
channels.... can't see as how ANY VHF unencrypted Mil-Air would be in
use these days, especially by BlackHawks

Vincent:
I have owned both a 7200 and a 7300.
Audio output from the 7300 was extremely low
by comparison. I wound up selling the 7300. The 7200 is extremely
similar to the 7100 with
the addition of some filtering however it is no
longer available. I would buy a 7100 without
hesitation.

Don't know where you live but I have 13 scanners running all day long in the 138-144 and 225-400 ranges. Scan about 1600 active frequencies here in Florda. 138-144 is FAR from dead and yet we do hear lots of Blackhawk tarffic here. There rally is a 2 minute span where there is silence in my shack (and NO I don't scan police). 99% of my time is spent MilAir scanning. You can see my MilAir scanning shack at http://www.MilAirComms.com/shack.html As far as encrypted goes they hardly ever use it. Once in a while I'll near a NORAD CAP plane conduct a quick test encrypted but that's it. Even NORAD Combat Air Patrol intercepts are done in the clear...

And the Blue Angels use unencrypted freqs during their show, I think you may not have had the correct freqs if you couldn't hear them. In fact if you go here you can hear an entire ThunderBird show I recorded. http://www.milaircomms.com/audio_library.html

Anyone try their Yaesu CT-29A programming cable with the Radio Shack
PRO-95? The Yaesu cable has the DB-9 at one end and a stereo 3.5 mm
plug at the other.

I know that there are an infinite number of ways these cables could be
radically different, but hope survives.

In the alternative, is there a diagram on the web for a homebrew
PRO-95 cable? I could compare it to ones for the Yaesu.

From my point of view it's like a group of us standing around discussing scanners and one of us says he has a radio for sale. Not only do we all feel ok about this, some of us may be interested.
On the other hand if we're standing around talking and some stranger walks up hollering about Viagra sales that's what I call spam (even if some of us may be interested).

I believe several people have used Yaesu cables (not sure about the scanner model) with the PRO-92,
93, and 95. You will need a stereo-to-mono adapter.

>
>I know that there are an infinite number of ways these cables could be
>radically different, but hope survives.
>
>In the alternative, is there a diagram on the web for a homebrew

There are some links to schematics here:
http://www.starrsoft.com/freeware/win95/cables/cables.html

Essentially, the cables convert the PC's '232 levels to 0/+5, invert them, and tie them together. Be
aware that the 93 and 95 have 3.3V on their PC/IF jacks, versus the 5V on the 92. If your cable is
not tolerant of this, you'll find that you'll be able to send to the scanner, but won't be able to
receive from the scanner.

Actually. the BC250D is available, no? Somebody in here reported
having one... but K, you missed the tailend of the eBay ad -

==== VERBATIM quote =========

On Dec-06-02 at 05:43:26 PST, seller added the following information:

!!!!!!!!!ATTENTION!!!!!!!!

!!!!!!!!!ATTENTION!!!!!!!!

!!!!!!!!!ATTENTION!!!!!!!!

!!!!!!!!!ATTENTION!!!!!!!!

!!!!!!!!!ATTENTION!!!!!!!!

ATTENTION BIDDERS!!!!!!!!!! PLEASE READ THE
FOLLOWING!!!!!!!!!!!!!!!!! ï¿½ DUE TO DELAYS AT THE MANUFACTURERï¿½S I
WILL NOT BE ABLE TO DELIVER THESE ITEMS BY CHRISTMAS, HOWEVER, I WILL
HAVE THEM BEFORE THE 1ST OF THE YEAR. I APOLOGIZE FOR ANY CONFUSION
THIS MAY HAVE CAUSED.

========== endquote ==========

I just went through dealing with UPS over the Thanksgiving holiday,
when a piece of eBay-purchased radio gear (for which I paid 2nd-Day)
didn't get here for 6 days, sat on the Seattle dock for 4 of those
days

Now, this vendor sez he can't get 'em until between Xmas and New
Years, for which there are exacty THREE shipping days, so NO way do
they get here before January, same time as everybody elses

what a dick - tho I see he's done the same thing before

Must be =some= kinda money in accepting charges, then refunding, seems
to me a lot of eBay vendors do it

My wife is interested in scanning and I would like to buy her a decent "beginner" scanner for Christmas.

Unfortunately, the economy only allows me to budget for $50 maximum.

Will I have to buy a used scanner? Which models are worth buying new/used? Does the price make this pursuit futile?

Thanks for all your input!

To clone between two PRO-95s, all you need is a 1/8" (3.5mm) mono patch cord.

To use a PC, you'll need a cable and software, neither of which are available from Radio Shack.

I have some software for the 95 (and 92 and 93) available here:
http://www.starrsoft.com

The Win95 page also lists some cable information.

Uh, like you want us to violate the communications act of 1934 and
possibly the ECPA for you. Do I have that right? And for which we get
absolutely nothing?

Ii¿½ve recorded the Air-Ground comms of STS-113 Shuttle Endeavouri¿½s landing today. The first transmission starts when the shuttle was about 270 miles from my shack. You can listen to the audio recorded from the Air-Ground freq of 259.7000 MHz at http://www.milaircomms.com/audio_library.html.

From my audio library youi¿½ll also have the chance to listen to STS-113 liftoff audio as well as audio from other interesting things Ii¿½ve captured. These include an F15 pilot during a MACH 1.2 test flight, the sound of a Coke bottle being opened in the cockpit of an F15 as well as other interesting items.

PS: It is the Win95 program I am trying to get to work. When I upload to the Pro-95, I get the progress box, then a completed message.

But the channels remain blank on the scanner...apparently no data is actually being received by the scanner.

The Win95 program puts the scanner into the mode to receive data. Your cable is bad or is the wrong type, comport may not be set right etc. Can you receive data from the scanner?

Thanks for taking the time to read this message.

For about 3 months now, I have been enjoying scanning the airwaves with my new Uniden 245 XLT.

Though it could be because I have not learned how to best use it yet, I can't help but wonder if there is a way to boost my scanner's ability to receive a signal?

Would a "longer" antenna work? Or is it simply an issue of location i.e. I usually tuned in at home in my office or the balcony of my apartment.

Any advice, comments, suggestions are welcome. Thanks for taking the time to teach me.

I have narrowed this down to a cable problem....getting data on pin 3 of serial port during upload, but not on tip of plug to scanner. So I'll be troubleshooting.

Comport speed is 4800 and is set by Win95. You do not need to adjust the comport speed but you do need to select the correct comport number in Win95. Since you can neither read nor write data, you don't have a connection to the radio at all. When sending data Win95 does not do any handshaking - it just sends the data out under the assumption that the connection is good.

Nice overgeneralization. Even if that was true for every person who reads
the newsgroup, it still doesn't justify violating charter.

This "group" has rules. One of them forbids for-sale stuff, and directs
those interested in such stuff to go to another group especially created
for such stuff.

> On the other hand if we're standing around talking and some stranger walks up

Spam isn't about content, it's about consent.

I don't send complaints to ISPs about for-sale traffic in this newsgroup,
and for the exact same reasons I don't complain about the Viagra sellers
or the porn-site hawkers in this newsgroup either.

When I click "Upload to scanner, Win95's upload box opens and it starts sending. But the scanner LCD gives a message "UP to send, remove cable to exit". The scanner receives no data; when the process finishes all channels are still empty and locked.

I have verfied data is going to the scanner port with a scope.

A thousand curses on Radio Shack for not having comprehensive information on this in their so-called Users Manual!

Al,

Yes, a better antenna would do wonders. Outdoor or attic antennas usually do best. If it is a matter of location, get as far away from sources of interferance (i.e. computer, tv, etc.). Back to the part about antennas. A bugger antenna is not always better. The higher the frequency, the smaller you'll want your antenna (i.e. 800mhz smaller antenna than 155mhz). If you double the height of where the antenna is it will increase range by 33% in theory. Also, try not to have adapters connected because the will cause a small loss of signal. If you live in a non-metropolitan or suburban area, you might want to consider a sgnal preamplifier ($24.99). Be cautious, though it may boost signals, if a strong signal comes in it may short the circuit.

Radio Shack does not sell a computer program for use with the radio so all they mention in the manual is cloning from one radio to another. Their support of PC programming is definitely lacking.

A few questions:

Did you monitor the waveform at the PC/IF jack on the radio with the cable plugged in to the radio? What was the voltage swing when you write to the scanner? What exact cable are you using?

I'm using a home-brew cable from "Bill's Radio Scanner Page". He has three versions, and the one I built in the simplest one (two transistors and a zener diode). I used the same curcuit (different cable, which I no longer have) on a Pro-2053, which uploaded OK but would not download.

I think I was wrong in my last post about data getting to the scanner. I think I was seeing noise from bad probe connection. I am just getting data pulses from about -2.5 to +6 coming into the little cable circuit, but just a 5v straight line at the scanner end of the cable. I though I had a bad transistor, but replacing it didn't help.

Obviously something wrong with my cable circuity; I'm going to start over. Sorry about taking up everyone's time.

Those new scanners must weight about 40-lb, judging from shipping charges!

5802. Re: Policy regarding posting of radio auctions

Newsgroup: rec.radio.scanner
Date: 2002-12-08 00:46:07 UTC
From: Paul Palinkas <paul@runwithscissors.com>
Message-ID: <paul-98AED1.16460707122002@news.drizzle.com>
Source record: 40742
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I see nothing in the charter for rec.radio.scanner concerning the
suitability of FA: or FS: postings.

From
http://open-systems.ufl.edu/mirrors/ftp.isc.org/usenet/news.announce.newg
roups/rec/rec.radio.scanner

CHARTER

rec.radio.scanner is a newsgroup for discussion about "utility"
traffic above 30 MHz. FM & TV-broadcasting, shortwave, amateur radio
and broadcast satellite-related material doesn't belong to
rec.radio.scanner because they have their own newsgroups. This
newsgroup replaces alt.radio.scanner. In addition, the
rec.radio.scanner will be gatewayed to a mailing list which will be
created as soon as possible after newsgroup creation, as there are
many who do not have access to USENET news.

AFAIK, alt.radio.scanner doesn't have a charter.

Unless there are further revisions of the charter, I don't see a
problem. If you wish to revise the charter, feel free to propose such an
action.

Netiquette requests the use of proper Subject lines (FA: or FS:), which
I encourage. Then newsreaders can be configured to ignore such postings.

However, posters should consider rec.radio.swap a more suitable place to
post For Sale items.

I that may be the problem.

The 95's serial port uses a lower voltage than the 93's, which is also
lower than the 92's.

If you're up to another building project, try Bill's simple op-amp
cable.

Or buy a cable from Purple Computing - www.pfranc.com

If I'm wrong about the problem being the simple two-transistor cable,
Don or Walt will jump in with correct info.

>I think I was wrong in my last post about data getting to the scanner. I
>think I was seeing noise from bad probe connection. I am just getting data
>pulses from about -2.5 to +6 coming into the little cable circuit, but just
>a 5v straight line at the scanner end of the cable. I though I had a bad

Were you testing the output end of the cable open circuit? I don't
think that works. There are pages at Purple that describe how this
kind of cable works and how to test it.

>Obviously something wrong with my cable circuity; I'm going to start over.
>Sorry about taking up everyone's time.

I doubt if anybody has minded helping out one bit. Keep us posted
when you get it working.

Amateur Radio Newsline™ Report 1321 – December 6, 2002

Amateur Radio Newsline report number 1321 with a release date of Friday, December 6, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. North Korea takes its only ham off the air and the first digital voice Q-S-O across the Atlantic. These stories are first on Amateur Radio Newsline report number 1321 coming your way right now.

(Billboard Cart Here)

**

INTERNATIONAL – N. KOREA: LAST HAM FORCED OFF THE AIR

The Peoples Republic of Korea appears to no longer want Amateur Radio operating from its soil. It made its intention clear when it asked its only ham ito pack his gear and send it out of the country. Jeramy Boot, G4NJH, in Nottingham England has the details:

--
Ed, P5/4L4FN, the only radio amateur operating legally from North Korea, has had to close down. On the evening of the 22nd of November, Ed was called into a meeting with the North Korean Radio Regulation Board. Without any explanation he was politely asked to stop all transmissions and to pack up all his radio equipment.

Ed spent the following day dissembling his antennas and packing boxes. That afternoon government officials sealed all the boxes and Ed has been told to take everything out of the country when he leaves North Korea for a two-week holiday on the 10th of December.

Jeramy Boot, G4NJH
--

With Ed now off the air, ham radio is gone from North Korea and nobody expects it to be resumed anytime in the near future. It also puts North Korea back near the top of D-X'ings most wanted list.
More on this story is at www.amsatnet.com/p5.html. (RSGB)

**

EMERGING TECHNOLOGY: DIGITAL HAM AUDIO SPANS THE ATLANTIC

Two ham radio communications pioneers have achieved a major breakthrough. The first two-way digital voice transmission across the Atlantic via Amateur Radio. Norm Seeley, KI7UP tells us who did it and how it was accomplished.

--
Doug Smith, KF6DX, and Didier Chulot, F5MJN, have successfully transmitted and received HF digital speech signals between Sevierville, Tennessee and Paris, France. It happened on Friday, November 22 nd.

The first historic contact took place on 21.218 MHz in the 15 meter band. Chulot spoke with Smith for several minutes using a high-frequency digital link within a 3-kHz bandwidth. Signal strengths were S-5 to S-7 and readability was solid in both directions.

The feat was accomplished using Ten-Tec transceivers and digital audio systems from Thales Communications.

--
DEMO AUDIO HERE
--

The Q-S-O demonstrated the advantages of digital audio for two way radio. This includes noise-free, FM-like reception and the potential for simultaneous voice and data exchange.

With an eye toward the digital future of Amateur Radio, I'm Norm Seeley, KI7UP.
--

The Ten-Tec/Thales system used in this experiment is based on a new international broadcasting standard for digital radio adopted last year by the International Telecommunications Union. The FCC has approved a similar standard for broadcasting in the United States. An Amateur Radio version is expected to appear on the market sometime in 2003. (KF6DX, Ten-Tec)

**

EMERGING TECHNOLOGY: PPW PROPOSES ELECTRONIC INFRASTRUCTURE TO WARN PUBLIC OF DANGER

A group of U.S. communications security experts has recommended that Americans be alerted to impending danger over their wireless devices. Amateur Radio Newsline's Fred Vobbe, W-8-H-D-U, takes a look at this new concept in emergency notification:

--
The Partnership for Public Warning says that a national wireless system could send alerts to citizens via their pagers, mobile phones or computer screens.

The Partnership for Public Warning is a newly formed thirty-member advisory body that includes representatives of government agencies, relief agencies and even a ham radio operator. And on Monday, November 25th it released a report that says conventional media broadcasts may spread alerts too slowly in instances of pending natural disaster or terrorist threat.

P-P-W says that the newly formed Department for Homeland Security should take responsibility for leading development of a national all-hazard public warning architecture. This, in partnership with other federal agencies, state and local governments, industry, universities and other stakeholders. The technology itself would be produced by private industry with the alert system

operated by governments and selected other organizations following a strict set of alert protocols.

P-P-W says that improved warning systems and procedures will reduce losses from natural and man-made disasters, and will speed recovery. Most important is that it will save lives.

For the Amateur Radio Newsline, I'm Fred Vobbe, W8HDU

--

President Bush cited quick responses to attacks as a priority of the new Department of Homeland Security which will consolidate parts of 22 departments to better prevent attacks in the wake of the September 11, 2001 terrorist attacks in which some 3,000 people died.

information about the Partnership For Public Warning is on the web at http://www.partnershipforpublicwarning.org/ppw (Published reports)

**

HAM RADIO GROWTH: GOOD NUMBERS TO US

The folks on that "other band" might call this “almost good numbers.” This with word that the number of radio amateurs licensed by the Federal Communications Commission is at a five-year high. But there are some caveats. Bill Pasternak, WA6ITF, has more:

--
According to the CQ Magazine website, FCC numbersshow a total United States ham population of 684,498 as of October 31st. And breakdowns provided by Joe Speroni, A-H-Zero-A, say that the primary growth has come among Amateur Extra Classand General Class licensees. Extra is now breaking the 100,000 point for the first time.

Technician Class figures have essentially held steady. Also we had 20,000 new hams entering the hobby in the year ending October 31st.

License renewal statistics were also encouraging with the renewal rate climbing from an abysmal 45% two years ago to a better, but still unacceptable, rate of 55% in the past year.

Better numbers, but not the best.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, in Los Angeles.
--

More on licensing figures are on the web at www.speroni.com/fcc (CQ)

**

HAM RADIO IN THE PUBLIC EYE: THE ATLANTC MONTHLY

The November 26th edition of Atlantic Monthly Magazine On-Line has some good words about ham radio and its role in homeland security. In an article titled America's Secret Weapon in the War on Terror, one of the groups singled out for attention is the nations corps of Amateur Radio operators. Its described in the article as an ever-ready line of emergency communications.

The story goes on to say that America boasts 650,000 licensed ham-radio operators. It quotes he ARRL's Mary Hobart as saying that about 1,500 of them are fully certified in emergency communications and are prepared to rush to the scene of a forest fire, flood, or hurricane with a jump bag full of portable radio equipment. And says Hobart, That can be crucial.

Atlantic Monthly notes that when phone lines, radio towers, and even satellites go down, ham operators -- broadcasting each to each other , and operating on batteries or generator -- stay on the air. And says Atlantic Monthly, after the terrorist attacks of 911 when New York's cell phones turned into paperweights hundreds of hams, some from as far away as Texas and California, turned out to provide radio lifelines for emergency workers and relief agencies.

The article is must reading for everyone involved in Amateur Radio public relations. It can be found at the U-R-L listed in this weeks Amateur Radio Newsline print edition.

The complete article is at
http://www.theatlantic.com/politics/nj/rauch2002-11-26.htm (KS2G)

**

ENFORCEMENT: FCC INVESTIGATING INTERFERENCE TO EMERGENCY TRAFFIC IN LOS ANGELES

The FCC is looking into allegations that two Los angeles area hams interfered with a distress call on an area repeater. The FCC's Daryl Duckworth, NN0W explains:

--
"The Enforcement Bureau has opened a case involving allegations of deliberate interference to emergency communications on the N6SAP repeater in the Los Angeles area. Anton W. Johnson, N6OAY, and Ledge Musselman, KC6NCN, are being asked to explain the allegations of the operations on October 2.

Information is also being sought from the repeater licensee. Scott Press.

This mater is being taken very seriously by the Enforcement Bureau since emergency communications is one of the foundations of Amateur Radio."
--

The FCC claims that Johnson and Musselman interfered with attempts to relay emergency traffic on the 147.435 repeater at about 9:45 a.m. on October 2nd.

Press is being asked to explain what action he is taking in this matter. He is also been directed to summarize any conversations he may have had with the licensees against whom the allegations have been made. The FCC says that Press must also provide any written correspondence he may have sent to Johnson and Musselman. All three were given twenty days from he date of the FCC letters to respond.

**

ENFORCEMENT: THE STORY OF THE EX-AA8DP

A follow-up now to last weeks report of the capture of Steve Anderson, the ex AA8DP. Anderson was wanted in connrection with an alleged attack on a police officer. He was arrested in the hills of North Carolina following a manhunt that has lasted over a year. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the story of how Anderson was caught:

--

A tip to the Fox Television program "America's Most Wanted" and forwarded to federal investigators has led to the arrest of Kentucky fugitive Steve Anderson, the ex-AA8DP. Anderson, an alleged white supremacist who resigned his Amateur Radio license almost two years ago and then operated an unlicensed radio station from his home, had been at large since October 14th of 2001.

According to the Louisville Courier-Journal, Anderson was arrested in the mountains of southwestern North Carolina by the Bureau of Alcohol, Tobacco and Firearms and the North Carolina State Bureau of Investigation. The A-T-F's Don York told the newspaper that America's Most Wanted received a tip about Anderson's whereabouts after airing its second segment on him about a month ago. The tip was forwarded to the A-T-F, which worked the case with North Carolina authorities.

Anderson is accused of shooting an automatic weapon at Deputy Scott Elder. This, after Elder had pulled Anderson's truck over north of Middlesboro Kentucky for a traffic violation. Elder was unharmed after Anderson allegedly opened fire, but his police cruiser was struck about two dozen times. Police said Anderson then drove into the mountains, and a search of his property turned up explosives and guns.

Anderson had attracted attention of authorities several years ago by playing host to a small Ku Klux Klan rally during which a cross was burned. He also allegedly operated a shortwave radio station out of his home, where his commentary against minorities, immigrants and the government drew the attention of the Federal Communications Commission. The Anti-Defamation League complained to the FCC about Anderson's broadcasts which were taking place in the Amateur bands. Rather than explain his actions, Anderson sent in his AA8DP license for cancellation. It was accompanied by a rather convoluted message that said he did not recognize the licensing authority of the FCC which he called an agent of a foreign power.

Anderson continued to broadcast but bowing to extensive pressure from the nations ham radio community, he took the transmissions out of the Amateur

service bands. They stopped after he disappeared following the alleged attack on Officer Elder.

For the Amateur Radio Newsline, In Henry Feinberg, K2SSQ.
--

As previously reported, the ex-AA8DP had been a member of the Kentucky State Militia until April 2001. That group dismissed Anderson because he refused to shut down his unlicensed radio operation. (ARNewsline(tm) from published reports)

**

THE INTERNET VS. HAM RADIO: HOTMAIL AND JUNO BLOCK ARRL E-MAIL FORWARDING

If you get your e-mail using the American Radio Relay League's @arrl.net vanity address, and use Juno or Hotmail as your account you know that you were cut off for a few days. It wasn't the ARRL's doing. Blame it on the twi internet service providers.

According to an ARRL bulletin the two companies notified the League on November 25th that they had stopped accepting e-mail messages forwarded to users of their services from the arrl.net e-mail server. According to representatives of the two companies, this was part of heir solution to the Internet-wide problem of spam.

The ARRL, through the vendor for the arrl.net server began working with both companies to resolve this matter. The ARRL and Hotmail reached a accord the fllowing day and service was restored. Juno was back late on Monday December 2nd. During the peak of the service outage, forwarded e-mail to nearly 6,000 ARRL members was curtailed. (ARRL)

**

RADIO LAW: NEW CODES DEVELOPED TO HELP STUDY RADIO RELATED HIGHWAY ACCIDENTS

State highway departments will soon get help tracking how many traffic accidents are caused by drivers chatting on their handheld cell phones or C-B sets, using their pagers or checking their personal digital assistants. In January, every state will receive a booklet of revised codes that describes causes of vehicle crashes, including distractions from electronic communication devices. The codes were developed by traffic safety and crash data experts, including the Governors Highway Safety Association and the Federal Highway Administration.

A spokesperson for the Governors Highway Safety Association, says that the updated crash codes will allow the organization to develop data that demonstrates whether electronic distractions in cars are a serious safety problem. A March report by the National Conference of State Legislatures suggests device-related distractions killed an estimated 600 to 1,000 motorists in 2001 and could kill 2,000 a year by 2004. (Published news reports)

**

RADIO EDUCATION: HAM RADIO COURSE OFFERED AT PENN STATE

Amateur Radio is a part of the training being offered this fall to freshmen at the Pennsylvania State University. According to Brad Parola, KB3HQE, Vice President of the Penn State Amateur Radio Club, part of the course during the first half of the Fall semester included exposure to Amateur Radio. Students were shown how to tune radios like the Ten Tec Pegasus, shown how to receive PSK 31 signals, and were given a tour of the world famous Rock Springs Antenna Test Range run by Dr. Jim Breakall WA3FET. Early in October, those students who were interested were given the opportunity to take their Technician class tests. So far 15 students have passed an Amateur service exam. (KB3HQE)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**
RESCUE UPDATE: ZL1AMO CONDITION REPORTED UNCHANGED

We have an update in the medical condition of famed D-X'er Ron Wright , ZL1AMO. Jim Meachen, ZL2BHF, has the latest:

--
A bit of good news this week. Wrights daughter Terri says the family visited Ron in the hospital and he was sitting up in a lazy boy chair. This is the first time any of the family had seen seen him out of the bed since he was hospitalized. Terri Wring says that Ron is also trying to communicate with those around him and he looks a lot better than on previous visits.

As reported last week, Wright suffered collapsed lungs while visiting Fiji. He was air lifted by an emergency air ambulance to Auckland New Zealand where he was initially reported to be in critical condition and on life support.

The INDEXA – the International D-X Association -- has established a fund to assist Wright and his family with the cost of air evacuating him from Fiji to Auckland. Donations go to the ZL1AMO Air Ambulance Fund, in care of Bill Jennings, W4UNP, P. O. Box 607, Rock Hill, South Carolina, 29731. Sorry, but INDEXA says that contributions to this fund are not tax deductible.

From Auckland New Zealand – down under – I'm Jim Meachen, ZL2BHF, reporting for the Amateur Radio Newsline
--

Updates on the fund and Wrights condition are being posted to the web at www.papays.com/opdx.html (ARNewsline(tm), INDEXA, AA7UC)

**

THE SCIENCE PAGE: WHALES YES – NAVY NO

A federal judge has tentatively blocked the Navy from deploying a new early warning system because it might harm whales. Amateur Radio Newsline's Brucce Tennant, K6PZW, has the rest of the story:

--
A Federal court has said no to a new high-frequency SONAR system designed to detect enemy submarines at long range because it could further endanger the worlds whale population. But in making his ruing, the judge also said the Navy may use the sonar during wartime and must be allowed to train with it beforehand.

In partially siding with environmentalists, the judge ordered both sides back to court to begin formulating a plan balancing environmental and military concerns. Environmental organizations say the Navy's powerful sonar system can strand, maim or kill marine mammals. The Navy disagreed.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.
--

A few days earlier, a different judge ordered the National Science Foundation to stop firing high-intensity sonic blasts into the Gulf of California because they harm whales. So far there has been no comment from either the Navy or the N-S-F. (Published reports)

**

HAM RADIO IN SPACE: UO-22 IS BACK WITH US – FOR NOW

G7UPN reports that U-O-SAT 22 is back on line and open for business. At least for the time being.

Chris tells the AMSAT News Service that new software has been loaded to try and keep the downlink operating most of the time. But says G7UPN, UO-22 is an older veteran satellite. This means it may give problems in the near future. More information is in cyberspace at www.amsat.org (ANS)

**

INTERNATIONAL – JAPAN: JA SAYS NO TO PLT

Japan has said no to the introduction of Power Line Transmissions or P-L-T in that nation. Following extensive trials, the Ministry of Public Management, Home Affairs, Posts and Telecommunications has decided not to permit their roll-out for fear of interference to other services.

The Japan Amateur Radio League had been actively working with the government, radio astronomers, broadcasters and others to assess the impact of P-L-T systems on the radio spectrum. The results of this P-L-T study in Japan is a real eye-opener. It showed conclusively that Power Line Transmission system emissions are harmful to High Frequency communications operating in the range 2 to 30 MHz. Because of this Japan's telecommunications regulators have refused all requests from P-L-T manufacturers to operate these systems. (JARL, Q-News)

**

INTERNATIONAL: GETTING ON THE AIR DOWN UNDER

Still in that region of the world, were you aware that New Zealand is one of very few countries in the world where licensed amateurs visiting from overseas can immediately operate?

Well it is and a visiting amateur can get off an airplane, walk into the terminal building and start operating on 144 MHz and above by simply signing his own call sign portable Zed-L. This, without the hassle of getting a license and without paying a licence fee.

For more information on operating in New Zealand as a tourist or visitor take your web browser over to www.nzart.org.nz (NZART)

**

ON THE AIR: COMMEMORATING DIANA

Back here in the U-S-A, the first successful moon bounce experiment was conducted by the Army Signal Corps on January 10th 1946. And to commemorate the event, the Ocean Monmouth Amateur Radio Club will operate from the historic Diana radio site on January 10th 2002. The Ocean Monmouth group plans to operate using Morse and SSB in the General and Novice Technician sub bands of the 80, 40, 20, 15, 10 meter bands. For more information on the Diana Project and for QSL info please visit the OMARC web site at www.qsl.net/n2mo (OMARC)

**

DX

In D-X, F6COW is reporteed tobe operating from the 9S1X club station in the Congo. He will reportedly be there until the 9th
of December. (GB2RS)

Also, F6BLQ will participate in the ARRL 10 Meter Contest on the 14th and 15th of December, also as 9S1X. His operation will be on SSB only. (GB2RS)

And ST1MN is a new ham in the Sudan. He will be active on all bands until the end of June 2003. Q-S-L as directed on the air. (GB2RS)

A lot higher in frequency, FT1ZK, is active on 6 meters every afternoon from Amsterdam Island. The operator is named Caroline and she has a beacon transmitter active on 50.086 MHz and running 24 hours a day. She will be on Amsterdam Island until January 16th. QSL via F5JCB. (VHF Reflector)

**

THAT FINAL ITEM: THE CANALS OF VENUS - DEBUNKED

And finally this week lets turn our eyes toward the planet Venus. Just our eyes. Not our telescopes. Because if we do use a telescope we might make the very same mistake made by a very famous astronomer regarding canals on that mist shrouded planet. Q-News Graham Kemp, VK4BB, takes us into the cosmos for this one:

--
Turn of the century astronomer Percival Lowell is well known for promoting the incorrect notion that water canals had been built on the surface of Mars. He

also drew a map of the "canals" on Venus; the only problem was that no one else could see anything resembling canals because Venus is always shrouded in clouds.

Turns out that Lowell had narrowed the aperture of his 24" telescope down to about 3" to attenuate the bright light from Venus. That little known fact - recently publicized - caught the attention of optical experts who realized that Lowell had unwittingly turned his telescope into a reverse ophthalmoscope, an instrument used to examine the interior of the eye. Instead of mapping the surface of Venus, Lowell was apparently mapping the shadows of blood vessels and other structures on his own retina!

Sky & Telescope magazine explains the situation in detail, presents Lowell's sketch of the Venusian "canals," and a photograph of retinal blood vessels. The two patterns are strikingly alike.

From Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.

5807. For Sale: Optoelectronics Optocom Receiver (firmware 1.5/Bitbanger)

Newsgroup: rec.radio.scanner
Date: 2002-12-08 04:17:09 UTC
From: kc1ua@scancapecod.net
Message-ID: <9b093b3c.0212072017.16801ee4@posting.google.com>
Source record: 40647
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.swap

I have for sale an Optoelectronics Optocom receiver. Specific details of the Optocom can be found at:

http://www.optoelectronics.com/optocom

This Optocom contains the latest firmware, version 1.5. It also has the Bitbanger addition. Unit is in excellent condition and has been used exclusively in an indoor environment.

Includes AC90 power adapter, telescoping whip antenna, serial cable, Trakkstar software disc and license, instruction manual, and Optoelectronics Utility disc.

Asking $400.00 shipped UPS ground US only. Payment via Paypal or PREPAID WITH US POSTAL MONEY ORDER ONLY!

Reason for selling: I have two of them, and this one is seeing very little use. Liquidating for purchase of other equipment.

Please E-Mail me at kc1ua@scancapecod.net if interested. Thanks for reading.

Well, it doesn't make it futile but it will be very limited. You may find a decent older used scanner for around $50, but definately no new ones.

Grove Enterprises has an old Uniden BC-145 selling for $49.99, but tax and shipping would put it over $50.
Also over $50, but under $60 at Grove is the Uniden BC-60XLT 10 channel handheld for $59.95.

You can find these items at:
http://www.grove-ent.com/hmpgbbb.html

Here is the text of the email I sent to this guy on 11/29/02, when I first came across one of his auctions for a BC-785D. It was sent through Ebay as a "Question for Seller." Strangely enough, I never did receive a reply!

- Craig

<<<< How is it that you have this scanner available for sale now? According to Uniden's website, and Strong Signals.net, the BC-785D is not slated for release until on or after January 15th, 2003. Yet, you state you will have the 785D and its handheld counterpart in stock within one week. Have the release dates been moved up? If so, do you have an official Uniden press release? The press release from 7/10/02 which you quoted within your auction specifies a November release date. However, as I mentioned above, this has been revised.>>>

Well some low life has gotten my ISP to revoke my posting priviliges.
(earthlink - stay away!) You need to get a life. I was reading
through the archives of this newsgroup on Google and this seems to be
a common practice now. Such a shame to ruin a great newgroup that I
have been part of since the start. Well this is my last post. My
equipment is pretty much sold. You win. I'm am sure that you are
very please with yourself. Have a nice life.

Get a length of copper plumbing pipe - 1/4 inch should do - and you can cut 2 pieces about 30 inches in length and create a vertical dipole you can paint and mount against the trim. The 1/4 inch diameter will give it some broadband reception and should cover most of what you want to hear. Frankly, even using just coated wire will do the job, but will not receive as broadly across the spectrum as 1/4" pipe. I can send a picture of something similar I built and put on my roof that receives quite well.

Another option is possibly running several pieces of coated wire, each cut for a different band, in pairs up & down, as a vertical dipole, all terminating at a single feedpoint connection. This may be something that can be virtually invisible.

tried emailing, but got returned undeliverable....

This is my first scanner, and I want to make sure I get the most out of it.

I live pretty close to town (about 1 mile from downtown). THere are 4 or 5 different police departments within a 10 mile radius. And the Outagamie county airport is about 5 miles away. I'd love to be able to pickup conversations to/from the tower.

I ordered a used BC9000XLT on ebay. Should be here Thursday. It didn't include the antenna so I want to get one installed before it arrives.

Should I just get a telescoping one that sits one the back, or a bigger one???

I live in a residential neighborhood, in a single story house. Not sure if installing in the attic would gain me much or not.

I see radio shack has a nice antenna.

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F001%5F002%5F007%5F000&product%5Fid=20%2D043

Maybe that would be overkill...

Any advice would be great!!

Thanks

Jeremy

I have used a lot of antennas but the best one I have found is the one from
Radio Shack that sells for $19.95 now. Number is 20-176. I bought one
about 12 years ago and it is still the best overall performer.

You could easily pick up a scanner at meijer, wal-mart, etc. While it won't have trunk tracking or even be programable, it will still make a great start.

Hi

I want to buy the ST-2 scanner antenna. Can I use
a preamplifier for better results? What about the
Watson WRP-1300? Any better suggestion?

Thanks

Last month, Radio Shack had their Pro-2050 scanner on sale for $50
on a closeout sale. You might check with your local Radio Shack store
to see if they have any left. If they dont, have them check their computer
for any other stores in the area that might have one. If one is found,it
can be shipped to your local store for you to pick up.

That would make an excellent scanner and a very nice Christmas gift.

There can be overlap between groups.

For example, I hang out on rec.autos.sport.indy, for discussion of
Indianapolis-style racing. Teams from the CART series used to race at
Indianapolis, don't any more, and fans of that series now have their
own group rec.autos.sport.cart. CARTstill remains on-topic within
rec.autos.sport.indy, though, because the cars are still
"Indianapolis-style" racers.

Yes, the crossposts and sniping between those groups do
get...interesting. But despite the existence of a dedicated group,
CART discussion still fits in the general group.

FWIW, all I see in the charter about what is allowed in r.r.s is

"rec.radio.scanner is a newsgroup for discussion about 'utility'
traffic above 30 MHz."

so all that's on-topic here is discussion of the radio traffic.
Discussions about radios themselves, or scanners or computer
interfaces, would seem to be off topic.

Good point, Ken.

Should we consider a revision to the charter?

After my last post, I discovered through a google groups search that
this debate is an eternal one. Perhaps a revised charter would resolve
this once and for all.

My preference would be to allow FS: and FA: posting, but if the majority
of the readers wish it banned, it should be explicit within the charter.

Hi there!

I�m looking for a programming software for the AOR AR8000 that WORKS!!!
Any suggestions... anyone...?

Please mail me if you have, or know about, a working software.

SM6VAT@hem.passagen.se

Greetings from Stefan in Sweden!

I personally use an indoor antenna on the back of the scanner (a
Pro-2053) and I hear everything I need to, usually within a 20 - 30
mile radius. What are you listening to that would require you to use
an external antenna?

bolt thrower <tucansam@whodis.org> wrote in message

: I can send a picture of something similar I built and put on my roof that receives
: quite well.

jmw _at_ panix.com -- would love to see some pictures, thanks. I was
thinking about a dipole but didn't know where to begin.

: Another option is possibly running several pieces of coated wire, each cut for a
: different band, in pairs up & down, as a vertical dipole, all terminating at a single
: feedpoint connection. This may be something that can be virtually invisible.

This is interesting... Do you have any URLs or such that might detail such
an antenna?

Well, I live in a very hilly county. LE's will come in just fine, and
then they'll go over a hill and disappear. I know that an external
antenna won't make signals magically penetrate a rocky hill, but I am
hoping that the air and ground stuff that I like to listen to might come
in just a tad better.

Maybe, but be cautious as it may amplify the signal too much, especially
strong ones, and will melt the circuit.

Don't forget to look at the "MEM LOCK" switch on the back, make sure it's switched to OFF. I know you can "zero out" each freq individually be programming in 000.000 and [ENTER] but I don't know of a keypad-type reset like the Uniden's standard 2+9+Manual while turning it on. You might try holding down different keys/combinations while turning it on. One to try might be holding the UP and DOWN buttons while turning it on, or maybe the PROG button.

I've got a pdf copy of the manual if you want it.

--
Harry Marnell
http://www.snowcrest.net/marnells/kma367.htm <~~ LAPD Communications History

To enter 000.000, find an open channel in the private bank. Press [PRIVATE] then
[HOLD], and use [UP] and [DOWN] to scroll through the bank to find an open channel, "000.0000"
- OR -
Find "000.0000" from the Search & Program Mode. Every search band has one "000.0000" display included between the band limits. It can be displayed only in the Program Mode (after pressing [PROG] and "CH" is blinking in the display).

Mint. $400, plus shipping. I'm on east coast.
To give you a feel of the power contained in this handheld gem, try
drooling a little over these specs :
100kHz - 2.04GHz receive
Triple conversion
1000 channels
20 scan banks
40 search banks
2050 search skip frequencies
FM, SFM, WFM, AM, NAM, WAM, USB, LSB & CW modes
Any step size between 50Hz & 999.95kHz in 50Hz increments
Preprogrammed bandplan
Scan/Search up to 37 channels/steps per second
Alpha-tag scan banks, search banks & memory channels
Memory operations (copy, move, swap, edit and delete)
14 segment S-meter
Band scope with 7 ranges (100kHz - 10MHz)
Voice squelch
Level squelch
Auto store
Adjustable power saver
Automatic Power Off (APO)
Sleep timer
10dB attenuator
Noise Limiter (NL)
Automatic Frequency Control (AFC)
Display and keypad backlight
Key lock
Adjustable key beep
Adjustable display contrast
Computer control
Optional slot cards

Well, I built the op-amp cable, and it uploaded from Win95 just fine.

I had the local trunking channel set up on bank 0, but the scanner would no longer scan in trucking mode...just conventional - even though I had the "Type" set to "MOT" in the Win95 program.

I had put the frequencies in manually earlier, and it was trunking fine. I mainly wanted to use the PC program to enter the talk groups and labels.

What now? Any ideas what I'm doing wrong?

5843. Illinois and 'Target' Freq's

Newsgroup: rec.radio.scanner
Date: 2002-12-09 02:13:08 UTC
From: Matt <jokermatt@ameritech.net>
Message-ID: <U_SI9.6094$Kw6.4041118@newssrv26.news.prodigy.com>
Source record: 40681

Anyone know what the frequencies are for the illinois police helecopter and the main chicago area dispatch? How about the freq's they use at Target. I can't find it anywhere.

5844. usascan.com

Has anyone purchased thru usascan.com???

How was it?

Thanks
Jeremy

5847. Re: Antenna -- indoor or outdoor?

Newsgroup: rec.radio.scanner
Date: 2002-12-09 03:52:47 UTC
From: "Ed G." <Spectrumhog@_REMOVE_StarBand.net>
Message-ID: <Xns92DECA7BD36F7Frog207Junocom@148.78.248.76>
Source record: 40602

An antenna I have built and used many times in the past is simply some pieces of bronze welding rod, (or even #10 solid copper wire), soldered to an Amphenol UHF receptacle.... PN: SO-239. Its simple to build this ground plane antenna, cheap, and it works well. After connecting the coax to the antenna, simply tape the coax just under the antenn to a supporting pipe or board.

If really necessary, I suppose I could take some pictures to indicate the above antenna's construction.

Ed

These frequencies are used at the Target store in Oswego, IL:
461.0375
462.9125
466.2875
469.4875

151.625 is used at the store on Rt. 59, Naperville.

The old guy that answers the phones is a dick, they charge too much for shipping generally, but otherwise they are OK. The old guy screwed me once on a quote (back before ordering off the internet took him out of the picture), but that was the only huge problem I ever had.

That's where I bought my first 780 from, yes as someon else said they are high on shipping. However the TOTAL price came out cheaper than any out source at the time. I don't care how much shipping is, its the total price I look at!

Service was good however besure your shipping & billing addresses are the same, he will refuse to ship if they are different.

I want a pair of a very small cordless ear phone (which can be placed
inside the ear, so that nobody can see it) and a very small cordless
mic (which can remain hidden behind my shirt) , which can communicate
to another unit or another pair of the same equipment.
Is it available. If so.. from where can i get it ??

Thanks in advance

In article <HBMI9.1763$Y04.2725@nntpserver.swip.net>, Stefan Karlsson
<Stefan.Karlsson@mbox204.swipnet.se> writes

>Iï¿½m looking for a programming software for the AOR AR8000 that WORKS!!!
>Any suggestions... anyone...?
>
>Please mail me if you have, or know about, a working software.

There is quite a number of packages still available that support the
AR8000. All "Work" however as to which suits your own needs is something
only you can decide. If none do the AR8000 RS232 commands are readily
available for development of your own software.

I'm sure there may be one or two others to the list which is now quite
dated but having quickly just checked the URL's they all still appear
valid.

Well Dick if you knew your stuff you would know that the Rino 120 is not 179.00 anywhere. That is for the 110. The 120 is $250 most places and without the NIMH charger and battery I am providing.

I was looking thru the CCrane catalog, and read their ad for this scanner. Looks pretty good, but thought I'd ask if anyone has had experience, good or bad, with it. Also, any suggestions on the best price?

Marvin, in Atlanta

thanks guys. I think I may give them a try. I just bought my first scanner last week (a used 9000xlt) and put up an antenna last night (radio shack 20-176). Already I caught the upgrade bug. That 780 looks pretty darn nice. The WinScan software looks pretty cool.

Yes, there is a "spy shop" somewhere in Central London that does such
(expensive equipment) they have an on line catalogue, but cannot remember
the address so do a search via google.
Be prepared to fork out the bucks though!

Used ones on E-bay are selling for about the price of a new one. I was thinking of maybe getting one too, but haven't seen alot comments about them. I was wondering if it can receive X10 video around 2.4GHZ or other standard video signals up that high.

any idea if it can be switched from NTSC to PAL? I would guess it could, should be a software thing, but you never know.....

I have one of the X10 camera/receiver sets, surprisingly good quality for the price! Have been able to get up to 300ft, still a great picture. Yes, it would be nice if the R3 can pick that up!

Well, I've noticed that, in the cases of incident notification, you get what you pay for.

I've subscribed to both paid and free notification services - the paid service goes like mad while the free service misses 90% of what the paid service catches. Why? Because you are PAYING for the guy sitting behind the keyboard to type messages.

I've been thinking of starting up my own paid service, since my only local competition refuses to get with the times and let you provide an email address rather than take on a $14 a month alpha pager in addition to the annual subscription fee. Plus they really sock it to you if you use the service as a newsgathering tool - the rate nearly triples.

I figure $3 a month per sub ($36 a year pre paid) should justify my time sitting in front of a computer sending email to a list.... even if you shoot news from the info - I'd just provide the info, what you do with it is your biz....

Thoughts? Good topic for a thread...

Not sure what prices are on E-Bay but got mine for
$309 with free shipping from www.gigaparts.com
a few months ago - had some kind of special or
something going. ~$329 to $339 retail seems pretty
common these days.

> I was thinking of maybe getting one too, but haven't
> seen alot comments about them. I was wondering if it
> can receive X10 video around 2.4GHZ or other standard
> video signals up that high.
I am no expert on this model and have not tried this myself
so take this for what you will . . .
I have heard of successes with 2.4GHz video but also
complaints about the unit's sensitivity in that frequency
range. Sounds like people have had better luck with the
900MHz devices.
You might look in the yahoo group ICOMR3

I am very happy with mine and use it on a regular basis.
Picks up AM and FM radio, weather, broadcast television,
local police, fire, air, municipal and business activity. I have
even used it for some short wave listening. I has a lot of
capabilities in a small package - it may not be the best
solution for all sitiations but it sure does alot and, I think,
pretty well.

It's a free market and he can try to sell it at any price. But what is
wrong is the fact that he promises to have the goods before a certain
date -- a promise he cannot keep.

Yeah, I looked at that one. There isn't anyone using digital around me now. And no current plans to upgrade from what I can tell. By the time digital is in use around here there will probably be a new "latest-and-greatest" radio with even more features. I'll probably wait on it. From what I've read about it on the web it seems that some people really think it's great, and others were disappointed with the specs that Uniden released. I'm a total rookie so i didn't follow the arguments entirely. Seems like for the price some people thought there wasn't enough reason to upgrade to it now, since only very few people are using the digital systems it can track.... I guess if you live in an area where digital is in use, you'll probably want it....

I may get the 780 for now, and see what uniden comes out with next!

I appreciate your advice. I've learned a lot from this newsgroup.

No more so than the nightly news does, well, nightly. Besides where do you think they get their info from? Most deskies I know rarely listen to the scanners unless all hell is breaking loose. They just wait for the pager to start rattling across their desk. News stations are a notification net's biggest clients.

Incident nets do not violate the ECPA unless they divulge information from frequencies not meant for public ears, like cell phone comms, encrypted TAC channels, or PAGER FREQUENCIES - as one of them found out. BNN I think was the culprit there.

Anything broadcast in the clear by a municipal, county or state agency over designated public safety frequencies for the purposes of public safety is exempt from the limitations set forth in the 1934 act and the ECPA - and is fair game to "divulge what you heard".

Sounds cool - which pins did you connect from the serial cable to which leads on the stereo cable? I'd like to make one for the 2067... I have no real need to download data back to the computer.

5883. Programming EDACS frequencies

Newsgroup: rec.radio.scanner
Date: 2002-12-09 19:09:22 UTC
From: KB <kb3ATsofthome.net>
Message-ID: <uv9qjcrs283bd1@corp.supernews.com>
Source record: 40623

Instructions say EDACS frequencies must be stored in the
correct location, and this is "often not in the frequency order".

How does one determine the correct order to enter these frequencies?

Most people call it 'Winscam'. Avoid it.

Take a look at ARC780 from Butel, not sure it usascan sells that package,
you can order directly at butelsoftware.com, also trunkstar780 is a good
choice but a bit overpriced tmho.

The short answer is "no", but I have to ask... with what would you associate such extra text tags?
The PRO-93 already lets you assign a tag to every frequency (300), every talk group ID (1000), and
every bank (10). What good would more tags do?

I feel this thread taking a mackey/cheek-like turn towards the neverending flame.

What a bitter hateful person.

Now, yes I will admit that I do tend to put out just as much noise as I do useable signal on this group - if not more - but it's truly all in fun, and I think most of you know that, judging from the downright funny posts I get back.

But lets compare the two posters engaged in this thread. George tends to post plenty of informative and useful information, whereas Glenn posts nothing but spiteful hateful insults to everyone he finds fault in.

Glenn also insists George back up with fact what he posted, but yet will not do the same for himself. For example: I have yet to see him post proof that he has indeed tried to shove his head where the sun don't shine as he claimed in message news:orwH9.11801$5P3.662833@newsfeed.slurp.net.

Sound ridiculous? Sure it does. But it's no less worthy of a demand for irrefutable proof than anything else posted here. Unless Glenn, you'd care to enlighten us all about how your rules apply to everyone but you. That's something I'd love to see you explain.

Oh wait I know. First I'll have to prove MY posts to Glenn... Oh I should have seen that coming. Two grown adults playing that old preschool favorite: "I'll show you mine if you show me yours."

Well how about it Glenn? Maybe you could get Mackey to take the picture.

Your scanner came with a Manual. Have you read it?

If you had, you would understand how to program the scanner and how to
use Win95.

Sorry, but it gets annoying when people are too lazy to do anything for
themselves.

I bought a 50' length of RG-58U so i could mount the antenna in the attic. Is that gonna be a problem??? Scanner will arrive Thursday and I want everything to be ready for my first test drive!

I read somewhere that you can get an amp that sits between your antenna and unit and will boost the signal over long cable runs.

5893. Re: Programming EDACS frequencies

Newsgroup: rec.radio.scanner
Date: 2002-12-09 21:58:39 UTC
From: Walt Bertram <wbertram@optonline.net>
Message-ID: <3DF51209.35669BC5@optonline.net>
Source record: 40634

There is no simple way to determine the order. If you are lucky, the Logical Channel Number (LCN) of the frequencies will be published wherever you found the frequencies. Often, the frequencies, when arranged in order of increasing frequency, will also be in order of increasing LCN, with the lowest frequency being LCN1. But, there are systems where the order is random, and systems where LCNs are missing. In such a case, if you can't get the LCNs any other way, you would listen using a scanner connected to ETRUNKER, which will display the LCN, and a second scanner scanning all the system frequencies, and try to correlate the two.

From: Antenna Warehouse (nospam@cis.net)
Subject: 4 sale Log-Periodic Scanner Antennas
Newsgroups: rec.radio.scanner
Date: 2001-10-02 19:18:26 PST

Hi,

We now have log periodic scanner antennas in stock for $63.70
shipping
included. These antennas were specially made for us, and after
extensive testing over the summer were found to have performance that
rivals that of logs costing many times our price.

They can be view in the Scanner Antennas / Base Antennas directory of
our website at:

http://www.antennawarehouse.com/

Thank you

Tim

Antenna Warehouse
811 9th Ave.
Camanche, IA. 52730
563-259-0840 10am-5pm cst Mon-Fri.
Email: sales@antennawarehouse.com
http://www.antennawarehouse.com/

Now me, why would such a straight up company refuse to reveal the
antennas they claimed to have spent a summer testing. I have to say
though, Tim removed the summer of testing claim from his Web Site and
also the I can't find his 3db gain discone claim. Now if he could only
explain a log that can't transmit on a frequency he claims it covers
he might be getting some place. Doubtful. The summer claim was
replaced with a link to George the shill Fetter's website.

No tell us another tale of you telling females to stuff...what was
that Hot Dog?

In article <Za7J9.22286$jf7.1465443@news2.west.cox.net>, me@none.com

Depends what you want to do with the software.

For programming and control ARC780 is the best choice.

Trunkstar also has logging and audiorecording but the memory editor is pretty basic and it has some stupid faults: for a mot 2 system you can only set 1 base/step where some systems use more then one settings amd the 780 can handle 3 settings. Not the end of the world but irritated me..

I use ARC780 and next version will get logging. I rarely use audiorecording but there is freeware that can record scanner audio to your HD.

Play with the demo's and then decide what best suits your needs..

I removed Scancat 2 minutes after installing it.. :-)

The 9000 is a very sensitive radio. I use the smallest/cheapest Radio Shack outdoor antenna with 50 feed of RG 58 and in my setting it is a perfect combination.

I am about 12 miles north of St. Paul/Mpls, Minnesota and have no overload and can hear pretty much everything in the metro area.

The loss from the cable is minimal and a preamp could cause more of a overload problem.

In spite of the title, I'm not trying to start a
war here...

After looking at the article in a recent Monitoring Times,
I'm wondering if scanning is going to go the way of the dinosaur.
For example, as more cities use digital modes, and these
can trivially use encryption, then doesn't this mean
that scanning is going to be working an increasinging
smaller set of available frequencies? Also, it's one thing
to pick up a clear (un-encrypted signal), but is there
a line being crossed (in a legal sense) if one actively
decrypts a signal?

I don't see this being an issue over the next two years,
but on a timescale of 5 years, given current paranoia
levels...

Regards,

PH

All depends what type of roofing you have. if it's a tin roof forget it, has to be non metallic. much much better to install up high outside if possible but may not be possible in your case. What type of antenna is it? What frequencies are you listening to? How far away are the signals coming from? Or how strong are they? The higher the frequency, the more loss the length of coax will have. Better to use RG213 or better if you can.
Yes, there are amp's available, but if you live in an area with lots of rf about it might overload the amp. if you live in a rural area that shouldn't be so bad. I have an amp inline at the moment that i just bought for around $20 Au. It can be used in the shack or as a masthead (masthead means you moount the "amp" at the antenna and the "power supply section" down at the shack and feed the electricity up the coax to the amp to power it) The masthead is the way to go because it boosts the signal from the antenna, so it effectively acts as top quality coax for a hell of a lot cheaper (depending on the cost of the amp of course). If you mount the amp down in the listening end you also amplify ANY NOISE AND INTERFERENCE as well as the signals you want to hear.

Anyway, i hope i helped a bit with that waffle on.....

Happy Scanning.

Gary

Or the PRO-95's manual (pages 56 and 57). Page 56 tells you to "store the appropriate mode (MOT or
ED) with each frequency", while page 57 (in step 3) tells you to set the "decoding method to be used
for the bank". Gotta do both.

Win95 lets you change exactly the same information that you can change via the scanner's keypad. It
just lets you do it a little easier (I hope).

You should look around more. CEI (usascan.com) has always had high shipping costs. $305.00 for the card is
reasonable, since I've seen them advertised anywhere from $299.00 to $329.00 depending. However $20.00 for
shipping the scanner, if he even has them, is pretty steep.

When given a set of EDACS frequencies, you should also see the LCN (Logical Channel Number) associated with each frequency. These must be entered in LCN order (i.e. LCN 01 goes in channel 01
in your scanner). Also note that if an EDACS system "skips" an LCN, then you must skip that channel
in the scanner.

this explains why the software I got don't work on pro 95

Hello Scott,

Thank you for your email.

The 20-048 is not the interface software for the Pro-95.

The software and cable for the PRO-95 (cat. no. 20-525) scanner it is
available at http://www.pro95.com/. The vendor at this website has a cable
and supplies download software for the PRO-95. A software link will be
provided with your shipping confirmation.

While this software/cable option provides an immediate solution, it is
neither developed nor verified by RadioShack. As a result, RadioShack
assumes no liability for its use. And all support of the software is
provided by the manufacturer of the software.

When responding please ensure that the ORIGINAL EMAIL IS INCLUDED,
either by using the REPLY option or cutting and pasting it in. Failure
to do so, may cause a delay in responding.

Looking for a decent cordless phone. Either 900mhz or 2.4ghz. Must use Digital Spread Spectrum technology, and preferrably has a digital answering machine built in. I'm looking for good, clear sound, and durability, I don't want to spend more than $150.

The Siemens Gigaset 4015 caught my eye. From what I have been reading, it has excellent sound, but is prone to failure, and uncomfortable to hold due to it's small size. I have also been reading info on the Panasonic KX-TG2583. This phone is standard size and is said to be very durable. But what worries me is it has 2 antennas on the base. I've read that the base transmits to the phone at 2.4ghz and phone to base is 900mhz. What are the advantages and disadvantages to this? When the phone is transmitting to the base at 900mhz, is it using digital spread spectrum, or is it just sending pure analog signal ?

I hear lots and lots of bashing of software - mainly Winscan and ScanCat.

What's not to like? I have Winscan myself, and yeah it isn't perfect but I haven't had any real trouble with it... it programs my scanner just great. I must admit I don't really use it's other features all that much but when I do they seem to be working. The only problem I encountered was when trying to import from the clipboard, which was a bit of a bummer because it would have saved me some typing but other than that, no big deal.

I know I have my can opener poised dangerously close to a worm can, but what is so awful about it? You guys have me concerned now.

Don't miss Walt's point. The PRO-95 manual is poorly organized but is complete. Everything you need to know about the radio is in there. Once you understand the PRO-95 manual, the use of the Win95 program is intuitive and no help file is needed. When Don wrote Win95 it was not his intention to teach people how to use the PRO-95 but rather to make it easier to program the radio. An understanding of how the radio works is assumed up front. The manual is available from the Radio Shack site in PDF format. I use the search function in Acrobat to help find topics that I need to review. It beats trying to find information by thumbing through the hard copy.

Even if it was analog, a person could only hear one half of the converstion
if they were listening in. Not all that much to worry about since it would
probably be boring to them.

Anything that Butel produces (i.e. ARC 780) is top notch stuff. I'd give a
real hard look and see what features the others offer that it does not and
whether those features are really worth the extra money.

I have a panasonic 2.4 GHz w/digital answering machine built in.
The sound quality is ok, not quite as good as a corded phone.
You're correct, Panasonic is not true DSS is both directions. There
was a bit of a stir about this when the phones were first introduced
a few years ago. I can't recall the specifics, though, except that
they're not as technically advanced as the advertising would have
you believe.

You're right; it's hard keeping track of all the charters, and I confused this one with others in rec.radio.*.

I'm searching for some of the documents that describe netiquette in general and specifically say that for-sale and WTB articles belong only in the "marketplace" newsgroups or those whose charter explicitly permits them. It's easy to find that netiquette rule carried into the AUPs of many providers; cf. <http://www.comcast.net/terms/use.jsp>. I'll keep searching for the material I remember seeing so long ago.

> Netiquette requests the use of proper Subject lines (FA: or FS:), which
> I encourage. Then newsreaders can be configured to ignore such postings.

That's a rule for the marketplace newsgroups; I just ran across it, of course without keeping a pointer in case I needed it. It's a good rule wherever FS/FA/etc posts are specifically permitted.

Remember, the charter doesn't prohibit porn-site ads or Viagra ads, either. It only suggests what the main purpose is. Any loophole-digger who would justify FS ads because they're not prohibited has to justify those as well for the same reason.

> However, posters should consider rec.radio.swap a more suitable place to

Elaborating on the previous post as follows:
Having a (TUNED) antenna means it is operating at peak effeciency, for maximum reciever performance, and also peak performance to transmit on a particular frequency on any one given band.
A discone antenna has several elements (TUNED) elements for whitch are cut to a particular legnth (IMPORTANT) so as it aid's the scanner for optimum performance through the frequency spectrum.
That is why there is several elements on a horizontal polarized directional tv antenna, think of it as, one of the element's is designated for every channel.
Example is for a 1/4 wave standard antenna.
234 is the figure for a 1/4 wavelegnth antenna
27.000mhz is in the middle of the cb band
234 divided by 27 is 8.6 feet multiply that by 12 gives you 103.9", standard whip for a cb, tuned and ready for xmit and recieve.
The Diamond mfg co makes a good scanner antenna, i cant send you the link here, but the Mod# is D130-J, 25-1300 MHZ,
$89.99.
Good luck
Fast Willie

They can be hard to find. FTP sites like rtfm.mit.edu and ftp.uu.net
archive a lot of them. Best is to hit news.newusers.questions and ask
when in doubt. Mung your e-mail address there; it's a popular place for
spammers to collect addresses.

Friends of mine who've owned other Siemens cordless phones have sworn off the brand entirely.

Radio Shack has a rebranded Uniden on sale this month for $99.99 ($129.99 with the answering machine) and a bonus free second handset with charger. I bought one and like it. Accidentally dropped mine four feet onto a tile-on-concrete floor tonight; not a mark on it, works fine. The Uniden version got good remarks on e-pinions.

When it comes to shipping, I just learned the hard way that you still
pretty much get what you pay for... Tho as a point of fact, the eBayer
guy =originally= wanted something like 30 dollars for shipping

Regardless, he =did= snare at least two (one 250D and one 785D)
customers, no one else is biting for now

So maybe this NG and it's denizens didn't change the world, but it's
pretty obvious we kept this one vendor honest

He sure as hell can't plead ignorance ;)

hahahaha. I know that 2.4 is not far off from a microwave oven, ok though because it's not alot of power. BUT 5.8Ghz! That's more than twice of a microwave oven! I'm sure 5.8Ghz doesn't take much power to cook a few brain cells. I would NOT feel safe holding that thing against my head. BTW, 5.8Ghz bounce off everyhing, would these phones be able to talk through walls? In a microwave oven, an extremely thin coating on the door window keeps 1,000 watts of microwave energy from escaping.

Do you know which Uniden model this is a rebrand of? I might be able
to get it at a discount from work. I didn't see any unidens on
epinions that look like it though.

You are assuming that ALL public service is going to use digital
encryption. I don't think you need to be worried about it. Trunking is very
expensive. And few are likely to be encrypted. It's mostly the larger Metro
areas that use it. Even if it's digital, as long as it's NOT encrypted
there is no problem listening to it. There will be many cities and counties
that probably won't even go to trunking let alone digital or encrypted
digital just because of the cost, many millions $$$. Scanning will be around
for a long time. Sit back and enjoy the show.

http://www.usascan.com/files/ats909.html

$209.95 for the ATS-909

Don't know about service but that's a damn good price.

The only AOR 8200 I found was $529.99 here:

http://shop.store.yahoo.com/electronics-frsradios-scanners/aor82alradsc.html

We have several models including some of the new 5.8GHz. I don't know
if I would call any of the plastic phones "durable", but all we carry
are made well.

To get into a "durable" phone with long range I would recommend a
look at the EnGenius SN920. The Engenius does not have the answering
machine.

We had considered a while back making aluminiminum foil hats for
people with like concerns. Would there be a market for that?

Some have suggested that one of the local stars is bombarding
the Earth with greater amounts of radiation but the environmentalists
don't want the gov to do anything about it because of the free heat
and the free electricity they get from their solar panels.

2.4 gigs (2450 megacycles -- check the back of your microwave oven)
was selected for cooking because it is the resonant frequency of water
molecules.

Any amount of power there is something to be concerned with. The
clowns who play with high powered wireless video at 2.4 don't know
what they're doing. Watch for cataracts in their later years.

> In a microwave oven, an extremely thin coating on the door window
>keeps 1,000 watts of microwave energy from escaping.

The thin coating has small holes in it to let you see into the oven.

The holes are smaller than the wavelength of 2450 megs and thus block
the signal.

The grounded piece of metal does keep the RF inside. A small amount
leaks, which can be measured with inexpensive test equipment. Dirty RF
gaskets on the door can increase leakage.

The path loss through a grounded piece of metal is nearly infinite
regardless of frequency.

You won't have grounded metal in most residences. But path loss
increases with frequency regardless of what creates the loss. Range
claims can't/won't attempt to predict path loss, so they all are
listed as LOS (Line of Sight) paths. LOS means nothing between the
transmit and receive antennas other than atmosphere, which usually is
not the real world.

True spread spectrum is allowed per FCC to run higher RF power levels
which may account for the better range. Spread spectrum tends to have
significantly better range anyway for technical reasons. Couple that
with louder RF and you may well get better range. As I see it, the
major advantage of 5.8 would be a less crowded band, and more antenna
gain in a smaller package. The higher antenna gain can make up for
some of the increased path loss from the higher frequency. The 2.4 gig

ISM (Industrial, Scientific, Medical) band is a garbage dump. You may not have a lot of luck using a 2.4 gig phone in the kitchen when the microwave is running.

5937. Re: scanning going obsolete?

Newsgroup: rec.radio.scanner
Date: 2002-12-10 16:48:54 UTC
From: Harry <marnells@cox.net>
Message-ID: <WVoJ9.34308$r4.2181478@news1.west.cox.net>
Source record: 40577
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Gotta agree with Steve. Trunking is expensive to begin with, and relatively complex and expensive to maintain, so it's not likely to take over the world any time soon, if at all. For a smaller city/agency it's just not necessary. And trunktrackers have already been around nearly a decade.

Digital may become somewhat more widespread than trunking, but since larger outfits like the US Forest Service are probably gonna go with APCO p-25, the smaller ones are likely to go that route too, for interoperability reasons. the P-25-capable scanners are just around the corner, within a month or so

Encryption is a little tougher to predict... existing laws already keep scanner manufacturers (and anyone else) from even going near it, so paranoid agencies may embrace it sooner than later (like Orange County, CA and that goofy Sheriff in Arizona - Maricopa County, is it??), and in those cases we'll be outa luck. An LAPD "bigshot" recently told me that they may eventually go encrypted, they're already P25 digital, but their first priority is more channels. To add encryption to the existing Astro Saber radios, he said, would cost them somewhere in the neighborhood of $300 each, times about 10,000 radios; plus 241 fixed transmitters and 443 receivers. Not exactly "trivial," but not exorbitant either. The current thinking is to go to 6.25 khz-spacing for their next round of radios, but AFAIK there's no such animal available yet that'll do that (with "Motorola" on the faceplate - City of LA doesn't yet know there are other radio makers). If they can get encryption cheaply as part of the package they'll go that route.

Of course 700 MHz is dangling in front of everyone too, so it's wait and see for the next few years at least, but enjoy in the meantime.

Wow, I can understand your annoyance up to a point. But just _reading_ the Pro-95 manual will leave a beginner or even a moderately long-time scanner user scratching his or her head. Yeah, the instructions for getting trunking up and working can seem like a review session for a veteran, but they can be mighty intimidating for someone who hasn't done the work before--especially since the manual for this particular unit is almost comically worthless to the beginner (the trunking section, that is). A person with a moderate understanding of radio and of reasonable intelligence should be able to set up a radio like this for trunking in an hour or so. I'll bet that a lot of such folks can't. The manual should get an award for one of the worst ever written. It is a fine radio, though.

Don

> or quantity of order. Most other places would also be Well below that
> $20 Per radio that Usa is charging.......

Ops, your advancedspecialties.net is $0.02 MORE then if I ordered from
usascan.

USA scans price WITH shipping is 344.95 (324.95 + $20.00)
AdvancedSpecialties WITH shipping is 344.97 (339.95 + $5.00)

Granted if you were ordering more than one scanner at the same time
you'll do better with AdvancedSpecialities but most people only order
one at a time so its a moot point.

Bottom line is that (and I've been in mail order business for 16+ years)
will spend $10.00 to save $5.00 in shipping..... In fact these thread
has proven the point once again....

5941. NJSP and Ft Dix comm

Newsgroup: rec.radio.scanner
Date: 2002-12-10 18:06:14 UTC
From: Scan Fan <sorry_noemail@ihatespam.com>
Message-ID: <3DF62D0D.D4A05FDD@ihatespam.com>
Source record: 40581

I've been hearing a lot of interesting activity of late on the NJSP trunk system frequencies of 866.6125 and 868.5125

Most of the transmission I'm interested in finding more about appear to be from 3-COMM, C Comm 1, C Comm 2. While these frequencies are listed to NJSP and are currently used by them most of the current comm is military in nature.

Helicopters are in use (Black Hawk, Eagle) transmitting video/audio feeds and telemetry. Air traffic concerns "missions" for aircraft. Numerous convoy ID's have been used. Names like Field Control, Night Vision, Charlie 6, HUB, Motor Pool, Twisted Sister, NET 2, ITW 1, SEC (?), Main Trailer, Water Tower and various Ranges are some of the more common ID's.

Helos would be tracking "convoys" possibly on screen rather than a visual and persons on the ground would be IDing vehicles both via helo camera video transmission and on the ground. "Targets moving" implies maneuvers and place names like "Times Square" should be street names from Ft. Dix.

I haven't monitored the NJSP in some months so this is new to me and a search of NG's on the Net only yield the following info for talk groups:
(Subfleet, DEC, HEX) 000-03 0 0000 C3-03 SOUTH
3-COMM DISPATCH (Division HQ) Fort Dix, Red Lion Station System C - Zone C3 Talkgroup

Is anyone else monitoring this comm and has anyone found related military frequencies in use? Is there any info on the Net about it? TIA for any help.

My handsets (not the bases) have a startling resemblance to the TRU446.
The TRU448 has the speakerphone (and identical handsets AFAICT).

Anyone know the correct voltage and wattage (or, even better, a part number) for the light bulb for the display on a PRO-2050? Mine has been burnt out for a long time, and I finally got annoyed enough to open it up and see what I need to replace. But I don't see any markings at all on the bulb, so I'm not sure what I should get. I could probably make a guess and find something close enough, but it's always nice to have the right thing.

Thanks.

sean

On full duplex analog, the frequency used for transmit from the base
to the handset is has both sides of the conversation on it.

You may also be surprised at what kind of snooping around goes on at
900 and 2.4. There are plenty of people out there that will listen in
on your analog signals. I used to do it - when I had more time on my
hands to indulge in my radio hobby (and it wasn't illegal). But what
I heard wasn't that boring - thought it was pretty interesting when I
was younger... had a couple of teenage girls living a couple of doors
down that talked about all kinds of stuff on 42/49 MHZ.

Yes, it would. If you have a stong signal comming in, than the aplifier will produce to srong of a signal for some recievers to handle. Not to mention it will also amplify noise. It isn't recomended unless in the countryside.

I live within 1 mile of Daytona Airports ATC transmitters (and one Jackonville Center remote). I use antenna mounted preamps plus live in an RF Rich enviroment. NEVER done any damaged to a receiver yet! If you use a quality scanner you own't have overload or intermod problems either.

You may ask "why if you live close to the airport why you need a preamp?" And the answer is that the things I want to hear (MilAir comms) are 200+ miles away.....

Looking for advice from fellow scanner enthusiasts in the Dunedin/Clearwater, Florida area. Have needed freqs but need more info as to talk groups that cover my area, simulcast lowband paging frequencies, area 2-meter repeaters, etc. Have conventional and trunking scanners, computerized. Would like to hear from area monitors, find the best way to set up the scanners for optimized performance. Thanks in advance for the help!

> County by any agency I know of.

I can't receive San Diego County, but these codes are used in Sacramento
and Yolo Counties.
The 10 codes and 11 codes can vary between departments, but the penal codes
and vehicle codes are used statewide.

Thankyou for the post Brian.

It was Tue, 10 Dec 2002 15:09:05 GMT, and SELLCOM Tech support
<support@sellcom.com> wrote in comp.dcom.telecom.tech:
| To get into a "durable" phone with long range I would recommend
| a look at the EnGenius SN920. The Engenius does not have the
| answering machine.

It is also not 'under $150' as the original poster desired.

I have a SN920 and the only problem thus far is a coworker with
a normal wireless phone being blocked out when I use mine. The
base is about 20ft from her cordless headset, and even though I
only have the antenna on the base in use and the short antenna
on the phone I can get a 1/4mi range. (Except one room that has
cinderblock filled with concrete walls for soundproofing.)

I've ordered the external antenna to get it further from the
coworker. Hopefully I won't blanket out all the (wimpy) headset
cordless phones. :) EnGenius is good ... but not for the faint
of budget unless they have need for range.

If you goto:

http://www.carmachicago.com/freqs.htm

Download the Chicago Area PDF. CARMA will have everything you need. Illinois police Helo is no longer and have been out of operation for years now. They have a few fixed wing aircraft they use for speed enforsment, and survellance operations from time to time. Goto page 24 of the PDF and it will have all the state police freq's for ya.

As for target try:
Target (Glendale Heights) 461.6625, 461.8625

Target (IL, US mobiles) 151.625, 151.895, 151.925, 151.955, 158.460 (paging), 173.325 (reported Lake Zurich use, security? image??), 461.6625(data?), 461.8625 (data?), 464.500, 464.550, 467.750, 467.7625 ("Ch.2 - Backstock, Backroom"), 467.800, 467.925, 469.0625 ("Ch. 1 - Front End") , 469.500, 469.550

Target (Chicago-area) 461.0375, 462.7625, 462.9125, 466.2875, 467.8875, 469.4875

Target (Lemont, Plainfield, Wheeling, Oswego) 461.0375 (D464, D026), 462.9125, 466.2875, 469.4875 (security, Oswego)

Target (Lombard) 151.625, 151.955

Target (Niles, Bloomingdale, Villa Park) 151.625, 151.955 (179.9 for both), 462.7625?

Target (Schaumburg) 469.05

Target (Streamwood) 151.625 (179.9), 151.955?, 467.7625 (paging)

Target (Wheaton) 151.955, 151.625?, 469.0625 (paging)

Target (Woodridge) 151.625 (179.9?), 151.955?

Hope that helps

Oh here we go....

Splain this one to me Lucy:

How come no one cites the news media (TV/Papers/Radio/Web/Et. al.) for violation of this act? Are they not divulging what they heard over their scanners EVERY DAY? Are they not also using the dissemination of the contents of these communications for financial gain EVERY DAY? Yet no one says anything about that. Odd isn't it? Has the nightly news been in violation of federal law since it's inception? Your answer implies that they are.

Now I'm no attorney, and you might be, so you just might be right - I dunno. But doesn't it make sense that if the media as a whole was violating this law they'd have lobbied to have it changed ASAP so that they could continue to operate? It's not like they don't have the money and the legal expertise...

So following that logic, what difference is there between the nightly news and an incident net? Both act on comm's received over a scanner, investigate further (if they're any good at least) and report the story to their subscribing audience. If my local TV station can do it, why not me? Question mark.

-me

1. Not always. Some of what they hear on their scanners, they send someone
to check out and report back.

2. How come no one tickets the newspaper trucks that violate speed limits
and double-parking laws, cut people off and otherwise deliberately and
knowingly flaunt the traffic laws? The newspapers have lots of political
clout, lots of ways to make a politician sorry he messed with them, and
if all else fails, lots of money to drag out litigation for years.

5973. Another pro-95 cable.

Newsgroup: rec.radio.scanner
Date: 2002-12-11 23:35:53 UTC
From: Richard Dreyfuss <jquimby@hotmail.com>
Message-ID: <Xns92E1A72B6C6FFjquimbyhotmailcom@206.141.192.32>
Source record: 40509

This won't be useful to the majority of pro-95 owners, but here we go just in case.

I was successful in using the ADMS-1E cable to program my pro-95 scanner using win95. This cable is used for the computer programming of Yaesu radios, specifically the VX-5r, VX-1r, FT-11/41/51R, and FT-10/40/50R. A stereo (female) to mono (male) adaptor is needed, and you're set. This work both directions (moving data both to and from the scanner).

This won't be very useful to most users, since the ADMS-1E cable costs more than what you could buy other cables for, but could be nice for owners of these yaesu radios. I personally like it, since I don't need to change cables to program the 2 radios, just change the adaptor on the end. But that's just me.

Enjoy,
Ben

The two frequencies are the output and input frequencies for the
repeater. SIMPLEX is car to car or car to base without using a repeater.

It's amazing to me that Radio Shack has several handheld models with text tag ability, but not Bearcat.

If I could just figure out how to add a text tag to the id sub-banks, I think I'd be happy with the Pro-95 I'm struggling with. It's so easy with the BC780.

Like a Uniden manual is any better?? The 93/95 isn't hard to use at all.
You just have to play with it until you get the hang of it. I would take
a 93/95 over a 245XLT anytime.

Commercial radios are readily available for this spectrum, as well many ham radios will also cover this after modification.(although it is illegal to use them for this purpose). The big question is, why would you need this? Where I'm at, even in podunk, we now have the fcc capable and making fingerprints of unwanted traffic on public safety frequencies.

Guys,

Is the digital model worth waiting for? I can buy a new 870XLT for half the price of the new 875D. I live in Birmingham, Alabama and the dig freqs I've seen listed on the net don't include my qth. I usually listen to UHF Milair stuff, so I don't know beans about dig, but I do know all the local police, fire, etc. is digital. I can pay the extra dough for the digital , but, only if it' will pick up local digital stuff.

Opinions, help appreciated

Better yet. Scanners should have detachable remote control
heads. I can't believe this option isn't offered on scanners
like it is routinely offer on VHF ham transceivers.

I could not agree more!

The Win93 and Win95 programs that Don has released are the best! RadioShack should compensate him for work already done and then offer an agreement with him.
He can than accept or refuse.

just my opinion!

So far, they're still using the old "ROVER" 506/507 Mhz frequency lineup for dispatching, though it may eventually change. Each division has its own "simplex" frequency, plus its own "fallback" secondary dispatch frequency. There are a number of new bureau-wide and citywide tac frequencies.

As best as can be determined, here is the current lineup: (Divisional "fallback" freqs not determined yet)

CENTRAL BUREAU

DISPATCH:
Central & Central Traffic Divisions: 506.7375
Rampart & Northeast Divisions: 506.9375
Hollenbeck & Newton Divisions: 507.1875

Central Bureau Tactical
Central Tac 1 507.1125
Central Tac 2 484.7875
Central Tac 3 484.8125
Central Tac 4 484.8375
Central Tac 5 484.8625

Central Div Simplex 506.700
Rampart Div Simplex 484.875
Hollenbeck Div Simplex 484.825
Northeast Div Simplex 484.575
Newton Div Simplex 506.825
Central Traffic Div Simplex 484.625

SOUTH BUREAU

DISPATCH
Southwest & South Traffic Divisions: 506.9875
Harbor & Southeast Divisions: 506.7875
77th Street Division: 507.2375

South Bureau Tactical
South Tac 1 507.0375
South Tac 2 484.3125
South Tac 3 484.5375
South Tac 4 484.2875

Southwest Simplex 507.175
Harbor Simplex 484.875
77th Street Simplex 484.950
Southeast Simplex 506.725

South Traffic Simplex 506.950

WEST BUREAU

DISPATCH
Hollywood Division 507.2125
Wilshire & Pacific Divisions 506.9625
West LA & West Traffic Divisions 506.7625

Why a reset? Just reprogram each channel with your own. Or if you enter 0
then enter it will clear the memory for that channel.

If they're digital and you wanna listen to them, you'll need to find out if they are using APCO P-25 digital, which is the only digital mode the new scanners will decode. If you want to hear anybody that's digital, a 780 will be useless for THEM... but it's a great scanner for other stuff.

I don't know of any site offhand with that info. You might check online for a "yahoogroup" that covers scanning in the area.

Hold down the [2], the [9] and [MANUAL] while turning it on. It will zero everything out. That's the standard "reset" for most all Uniden scanners.

Thanks guys. I guess I'm not really clear on that yet. I understand the concept but will need to do some more research....

Would I want to program both freqs into my scanner, or just the output?

If I understand it right, the input freq would be from a squad car (for example), and the repeater would output that transmission on a different freq at higher power....????....

So I'm guessing I would only want/need the output freq.

Well, I played hell finding a cable for my new BC 895xlt but I "got"
one on the way.

Trying to deal with Uniden/Bear Cat.
I wish they could understand that one good employee is worth ten or
twenty "minority" employees. After spending a few minutes with the BC
parts department they (she) told me that there was no plug on the 895
and no cable for it.
I called a nice guy at Futurescanner.com and he had the cable and
some software that I am going to try. Rick at Universal did a fine job
finding Future on the net for me and he is sending me my money back for
the cable I got from them and said just keep the cable.
When I tried to call Pozilla Software that make the WinScan 2.10
there phone is cut off with no forwarding number.

6009. Daiwa Or Alpha Antenna Switch: Opinions ?

Newsgroup: rec.radio.scanner
Date: 2002-12-12 17:44:11 UTC
From: Robert11 <rgsrose@tiac.net>
Message-ID: <atahr3$if2$1@slb1.atl.mindspring.net>
Source record: 40449

Hello:

Have decided to purchase either a Daiwa or an Alpha antenna switch. Do listening only.

Will need two; one (the cheaper version) for below 30 MHz, and one for the above 30 MHz with N connectors.

Have looked thru many posts on antenna switches on the newsgroups, etc., and can find pretty much an
even split between those that think Daiwa are poorly made, inferior, etc., and those that think the same for the Alpha
brand ("nothing but a cheap wafer switch," etc.).

A bit surprising; imagined that there would be a concensus, but apparently not.

Since it looks like it will have to be either one of these two, was wondering if anyone would care to add their thoughts?

thanks

If you're just ordering the software, you can do so from ScannerMaster.

If you need support they only do it by email now, and from what I hear it's sporadic at best.

Is there a URL for Futurescanner.com? I can't find them on the net.

As for the customer service, it doesn't seem to matter if they are minority or not, most of them suck. It DOES
matter if they are able to understand English or not, which always seems to be the problem.I had a huge problem
with Verizon customer service and the only person that was able to understand the problem, let alone solve it,
was a minority. Everyone else, white, black, or whatever, was a moron.

I don't mean to start a thread, so I'll get off my soapbox now.

Well I am everything but an expert on the subject,but the Daiwa switches have worked very well for me over the past 10 years.I have used them on HF as well as 50MHz and above for both transmitting and receiving purposes all with great success.Hope this is of some help to you......Good Luck!!

6021. Cellphone jammer needed. Where can I purchase one?

Newsgroup: rec.radio.scanner
Date: 2002-12-12 22:33:08 UTC
From: toomanyradios@aol.com
Message-ID: <20021212173308.03151.00000029@mb-mq.aol.com>
Source record: 40461

Received this e-mail from a friend of mine today. She's not a radio expert or technical type. Just an average citizen who is tired of rude people making nuisances of themselves in public with cellphones:

"I just came from having lunch with friends at (a rather expensive restaurant.) Everything was fine until a cellphone started ringing at the table next to ours. The guy answered and proceeded to engage in a loud argument with his wife/girlfriend/lover. This went on for over 20 minutes! This inconsiderate S.O.B. stayed at his table for the entire time. He made no effort to go to the lobby or outside and finish his call, despite the fact that he had finished his meal and his eating companion was waiting for him to get off the phone so they could leave!

Ove the past few months, I have been interrupted by these selfish slobs at movie theaters, restaurants, even at church! A cellphone rings during the middle of the sermon and it's owner takes the call! Stays right there in the church pew and talks for several minutes, conveniently ignoring the angry glances of both pastor and parishoners. If these were emergency calls, I could understand. But in each instance, these were simply routine telephone conversations that could have been made at another time and place. Due to the loud and boisterous nature of those engaged in the calls, I couldn't help but to hear all the fine details of their conversations.

I realize modern-day America is a society of "me, me, me, and the hell with everybody else." I also realize this type of behavior is only going to get worse, not better. But I am damn sick and tired of having my outings compromised by these people. When I pay money to see a movie or eat at a fine restaurant, I have the right to enjoy myself and not be constantly bothered by some jerk talking on a cellphone. Asking the offending party to "please take your call somewhere else" is a waste of time. These people simply have no regard for common courtesy or public decency. If I'm going to maintain my right to peace-and-quiet, I'll have to take matters into my own hands.

Is there any kind of device I could buy which would allow me to shut off these phones? Someone at work told me that in Japan, they have "cellphone jammers" which cut off all conversations and keep phones from ringing within about a 50-foot radius. Have you ever heard of these? If so, where can I get one? Thanks. I knew that if anyone knew, you would."

I tend to agree with my friend. The cellphone situation has gotten completely out-of-hand. All information and suggestions on this would be greatly appreciated.

Hi ho, hi ho, a trolling we will go....

I seem to remember this topic. Deja-spew.

Tell you what you do - this really works, too. Announce to your dinner companion very loudly that scanners are great and you can monitor ANYTHING, even that cell phone over there. Then you pull your scanner out and begin searching the bands, while you look over at Mr. or Ms. "Look at Me and My Important Cell Phone", smiling like the Grinch did when he had just figured out how to steal Christmas. Stop on anything that sounds like a phone conversation and listen intently for added effect. $10 says they end the call very quickly....

I can't believe no one mentioned the mother of all scanning sites.

You MUST (yes MUST) visit www.strongsignals.net! There you will find more about scanners than you ever wanted to know and links to even more stuff than that.

Rich Wells, you are one sick pup - and we love you for it!

It's probably the same bitch that complained to Ebay about mine. They sent a "friendly note" about their policies. I asked for them to specify what I did wrong. They quoted my FA message. I asked them to please clairify how a FA message for a scanner on the scanner newsgroup justified a problem. They couldn't explain it to me. I told them not to bother me with thier crap in the future unless they plan on fully investigating it before accusing me of doing something wrong.

The auction went through to the closing date and was sold.

Dan,

I toggles the PL / DPL tone functions on and off.

If you programmed any of your channels / freqs with a PL / DPL tone,
pressing this button will turn it on.

I BELIEVE the TN means TONE< and the MN means monitor.

It is universal for all channels, turn it on and all tones on all channels
are activated, turn it off, and it is carrier squelch for all channels.

>Subject: Re: Cellphone jammer needed. Where can I purchase one?

There is some new technology called "Q-Mode" (Quiet Mode) that emits a RF field for a short distance that the newer cell phones recognize and silences the ring and usually initiates the vibrating "ringer". That wont stop the SOB's from having the conversation though. Sounds like you need a really crappy square wave generator with harmonics out the whaazoo to carry in your pocket!

|
| Our phones have great power!!!

And, as you well know, an EnGenius *will* bury any other phone.
You don't know *power* until you have one!

Your other phones are mediocre in comparison.

Fortunately moving the base unit gave my coworker's 900MHz phone
a chance to get a signal. But she still can't go more than 50ft
without losing her signal. My old 2.4GHz phone worked a little
better, but the base unit sucked in RF from a nearby radio station.

I started looking at higher end medium power phones, but as the
price worked up the EnGenius became cost effective. $348 later
(free shipping) I had a basic system, $96 after that (w/shipping)
I had a 60ft cable and outdoor antenna. I could have paid less
if I knew I needed the external antenna and cable in advance. I
could have paid less if I would have bought from someone I did
not trust, but the extra $6 was worth it in the long run. :-)

yes x10 send standard NTSC, it is just that the R3 is not sensitive enough
to pick it up. It is deaf at 2.4Ghz. I set up my x10 in the basement and
was barely able to receive it from upstairs, wooden floors. If I took the
rubber dummy off, the reception was better but you will probaly not see
your neighbours x10 if he has one.

don't have your mobile antenna in the front of your car
if you can. to reduce some ignition humm. is to mount it in the trunk area.
now if you mean the high pitched squeal sorta sound. that is alternator hum.
and can be filtered out. either filter the alternator. the + going into the
radio or the + and - in the radio

The police stations in my area(north dakota) are going to be going to digital radios.
I'm wondering if i will need a new scanner to recieve the new frequencies or will my old scanner work.

BTW I have a uniden 50ch scanner from wal-mart, not sure of model #.

thanx!!

Not fraud until he is sent or asked to be sent money. Since the auction had not ended there was no binding contract nor did he ask for money. Therefore no fraud.

This would be a very looooong shot but possibly attempted fraud in which you would never find a DA or SAG (State Attorneys General) to file charges.

Lets face it, the guy did the right thing and he still gets crap. Goes to show you that its impossible to keep everyone happy so why try...

What did I assume??? in America, when someone refers to a minority, it means
a person of color (black, Latino etc)

how else can a comment like that be interpreted?

Do you think he was making a racist slur directed at white people???

Use your head

.

6052. Temecula, Riverside California Edacs Trunk Frequencies?? Elsinore Peak

Newsgroup: rec.radio.scanner
Date: 2002-12-13 04:54:07 UTC
From: Jim <jbollit@ix.netcom.com>
Message-ID: <atbp57$kk0$1@slb2.atl.mindspring.net>
Source record: 40492

Hello,

I have searched the net for the new LCN's for the Elsinore Peak freqs for the Riverside County EDACS system
that is used by the Temecula California police force and have been unable to find anything. It appears that they have
changed frequencies or LCN's as the old ones I had before do not work now as they have for the past 12 months.

Up until October of this year I was using

LCN1 866.2375
lcn2 866.7375
lcn3 867.2375
lcn4 867.7375
lcn5 868.2375
lcn6 0000.000 lock out on BC780
lcn 7 868.7375

and my BC780 followed the Elsinore peak system perfectly. I tried the scanner today and it does not track the system.
The radio can hear ok as if I step through the frequencies shown above, I do get traffic with strong signal strength,
but the radio does not track the Elsinore peak system when in the trunk mode.

Any help or advice GREATLY appreciated.

Jim

JL(or anyone)-Have you ever tried using the EnGenius with the headset
adapter? If so, how is the sound, and is it cumbersome?

Nice to be talking about something other than Verizon PRL's.
Marc

Hello,

I've got any knowledge about this frequencies world but in the goal of but
my first one.
I would like to know if a scanner is able to catch data from
bluetooth or 802.11 wlan and put it in a computer ?

In other words what kind of scanner is able to catch data and translate
it on a pc .

Thanks in advance

Vincent

TMC,

"war driving" thx for this precious info .

But what a scanner (by example IC-R75) could see from 802.11 communications.

thank you for your time.

Go to <http://www. uniden.com> and look around, they may have manuals on line.
Or offer reprints.

Start listening. Then try the states
that adjoin your state, that's assuming your within twenty (20) miles
of another state's boarder. to see if you can get any traffic across state
lines. Here in
New England we can listen in on two or three states at a time.
Then try looking up the agencies' s names or towns/cities place names you hear
mentioned on the BC-1 at <http://www.cityfreq.com:81/> and match them up to the
frequency data listed.

For the limited time spent with the follow on radio, the BC-7 i can't recall
any way to read out a frequency.
On some Uniden scanners ,without a direct frequency readout, the radio will
read out a
frequency when you "hold" on the channel and punch a button. Then the freq.
reads out one (1)
digit at a time. Again don't know if the BC -1 will do this?
Jim

Both of these standards use spread spectrum.
This was not done to keep the data hidden, but to allow
multiple users in the same area. The SS gives good noise
immunity. You should be able to find the steping sequence,
but unless you can program your scanner rapidly shift frequency
I doubt if you will hear more then a "click" now and then.

The best receiver for Blue Tooth or 802.11 would be a
Blue Tooth or 802.11 card for your PC.
The 802.11 equipment is comming down in price.
Good luck and let us know if you suceed in receiving anything.
Terry

America is a pretty big place....

Latinos are not "persons of color". Neither are Asians, who are
soundly in the minority category in most US populations.

Curl, your RG-58 and antenna will be better than the supplied antenna. However, remember as you boost your signal, you also boost noise (trash). Anywhere around 50' of cable, the RG-8 would be better. Bulkier, but a good RG-8 shielded cable will do wonders. The adapters are available for this setup. Hope this helps, Gene.gene491@aol.com.....

CJM, you proberly can't find a new scanner for $ 50.00. However, there are some used ones for that price. If you run across one and it has 800 mhz, get it. Seems like all agencies, police, fire and emt's are going to 800 mhz trunking. In other words, more for their money. Newspapers, used sale mags., yard sales and flea markets are good places to look. Being in the business for 40 years, I have found many good deals at these places. Good Luck, Gene.gene491@aol.com....

FWIW, I believe that's the URL supplied with the cable. Mike
(pro95.com, blackbag, etc.) is skirting the terms of Don's copyright
notice.

I think it's a scream that RS is pointing people there. They've also
pointed people to Mike's pro-93 page. I wonder if they know the
origin of the PRO-93 software there!

Got my cable today for my Pro-95 and it works great, EXCEPT for one small problem, the control channels of the various systems I've loaded do not self-block. If I want to scan, then I have to L/O them manually. Also, I've tried loading them manually, the same. Everything did work fine before. I've re-loaded, even cleared all entries, but no good. I'm using Win95.
Any suggestions/assistance/comments appreciated.
TIA
Jim

Sounds like you have not set both the BANK and the CHANNEL modes to the
proper MOT or EDACS mode.

Have you tried a preamp? Strange it works better without an antenna
attached. I wonder if it only uses an internal antenna at 2.4 ghz.

I have are four local 900-mHz frequencies licensed to TXU, which supplies power in my area. These are from a wireless.fcc.gov search.

There is a column marked "Freq ID" and they are numbered 1, 2, 3, 4. I don't supposed those numbers would be the LCN, would they?

The type of trunking system is not managed by the FCC, only the frequencies. The key to using the database is to locate the LatLong of the agencies transmitting antenna and once you have that you do a Lat/Long/Service search. That'll narrow down the location and the frequencies for that agency.

Enjoy

Fred

There's (at least) two ways of doing it. For years I've used Radio Shack's "CD-to-Cassette Player Adapter" with my handheld scanners and my ham HT. R/S part #12-1999... it's online, and http://shorterlink.com/?Y24QOK will take you to it. You can run your scanner at quite low volume and get a longer running time on each battery charge

There are also some low-power FM transmitters that plug into the scanner and then your car FM radio receives them. Don't have any URL handy. One thing about them I don't care for is all the ones I've seen are run on AA or AAA batteries... could get pricey. There mat be some that run off the cig lighter, but I haven't seen any.

HTH

Just about every place I've ordered from using a credit card, the shipping address has to be the same as the credit card billing address. It's just a simple precaution to make sure that someone isn't using a stolen credit card.

It seems that you've got all the right frequency bands, but you'll DEFINITELY need one of the new Uniden scanners if they go to APCO P25 digital. (If they go to any other kind of digital you'll be outa luck, but P-25 is by far the most common). ALSO, if they go to encryption (scrambling) you'll be out of luck either way.

DX-398 - comes with box and AC adaptor $100 + shipping

Pro - 92 scanner comes with box, nicads and 9v adaptor, will also include CD rom of control software
(less cable) and manual $125 + shipping

Pro 2050 scanner 300ch Trunk tracking scanner. $130

HTX 252 2m mobile. Used since September $115 plus shipping

Other items for sale

Acatel ADSL modem for sale. Configured to work with Bellsouth DSL. $85

Zip Drive - uses 100mb disks $35, with power supply, cable and zip disks.

I want to sell these radios, so I can buy a FT-817.

I'm looking for a good antenna for the low 900Mhz range.

Any suggestions???

I wouldn't be above building one if needed.

>JL(or anyone)-Have you ever tried using the EnGenius with the headset
>adapter? If so, how is the sound, and is it cumbersome?

If you plan to use a headset then the EP436 is a much better choice
because it has a headset jack. If you go with the SN920 then the
rugged case can help protect the little headset dongle.

Regarding the SN920 headset dongle. They work just fine. They break
easy and they are expensive to replace.

Regards,

Steve

The FCC does not assign LCN's - that's done by the local system administrator. 900 MHz systems are narrowband with a 4800 bps control channel. The only trunktracker that will track this kind of system is the BC780. See http://www.trunkedradio.net/modules.php?name=TRSDB&sid=1466 for details.

Etrunker4800 will show the LCN number when a channel is active as will ed.exe for 4800 bps systems. It is necessary to monitor the voice channels with a second scanner and match up the activity on Etrunker with the transmissions heard on the second scanner to pair the LCN with the frequency. Hint: use the link I gave you below and you won't have to go through all that trouble.

I've seen that link numerous times....Tyler is not listed on the frequency list. The frequencies I have are on there, but scattered throughout in different locations.

I looked for Etrunker4800, but couldn't find it. Found Trunker and Etrunker, but no Etrunker4800.

I don't have a data slicer right now (this is all new to me) but I love tinkering with electronics and that me soon be a rainy-day (oh, hell - sunny ones, too!) project.

I was wondering if anyone could tell me...
Should I hook up an EXTERNAL antenna for this, and if so, which is the best
to use...?

It is a PRO-43... Hand Held

Probably won't hurt, if there's stuff you're not quite receiving well enough. Are you talking about when you use it at home or mobile? If mobile, an outside antenna will almost always help you.. those radio waves don't get into a car very well with all the metal (unless you've got a fiberglass car like a 'vette <G>). The Pro 43 is a great scanner, but not quite as sensitive as most Unidens for weak signals.

At www.trunkedradio.net select DOWNLOADS, TRUNKER & ETRUNKER, and download ETRUNKER V3.83. The zip file contains the 9600 and 4800 bps versions.

Data slicer information can be found at trunkedradio.net and www.ulster.net/~petrow.

Tyler is listed under the East group. I suppose it is possible that the chart is incomplete, or the FCC site data may be misleading you........

A lot of times depts have to sign up for new frequencies or change them every so often. If you look closely over the years there are slight changes in the law enforment frequencies. This is because of new digital systems and repeater towers.

Most all of the emergency services in the lower mainland are encrypted digital and are un-scannable. You can go to the e-com website and they have a map of the municipalities that are fully digital and parsley digital at http://www.ecomm.bc.ca/ I do know that Burnaby fire is still analog but not for long also the RCMP highway patrol but again not for long. The system that they are using is well above the new Uniden digital scanners so don't waist your money on one.

6118. PRO-95 AC adaptor

Newsgroup: rec.radio.scanner
Date: 2002-12-14 06:44:53 UTC
From: Sean Harding <upwxixmegg2rf5yb@temp.seanh.net>
Message-ID: <upwxixmegg2rf5yb-61548C.22445213122002@news.sharding.net>
Source record: 40408

Could someone who has a PRO-95 with a reliably working AC adaptor tell me the exact part number and tip you have? I bought a PRO-95 tonight and tried to get an adaptor, but the one that Radio Shack claims it takes didn't work properly. You had to wiggle the plug around in the jack to get power to the scanner. Not very nice. I stood there for literally 15-20 minutes while they tried three different scanners and three different adaptors with the same result. It's possible that there were three bad scanners (in which case, the one I have is bad) or three bad adaptors, but I'm not convinced it was the right part (wrong tip perhaps). If someone can tell me one they're using reliably (wiggling the plug in the jack doesn't cut off the power), I'll get one and see if it works. If it doesn't, I'll assume the radio is bad and take the it back.

Thanks.

sean

6121. Pro-93 trunk *scanning* starts working at Midnight

Newsgroup: rec.radio.scanner
Date: 2002-12-14 08:53:29 UTC
From: limenate <limenateDELCAPS@excite.com>
Message-ID: <dkCK9.7853$Eu4.4186198@twister.columbus.rr.com>
Source record: 40411
Cross-posted to: alt.radio.scanner,rec.radio.scanner

My Pro-93 is programmed for the Columbus OH trunking system.
Before midnight, 'scanning' doesn't work,
while 'manual' gets lots of broadcasts like you'd expect.

I can leave it scanning for hours and get nothing,
then as soon as it hits midnight transmissions start coming through.

Does anyone have any insight into why this would be?

Do they maybe switch transmitters or switch freqs around on a schedule?
I guess it would have to be the control channel ... ??...??? ...
(since manual works all the time)
My buddie, five miles away, doesn't have the problem,
and my scanner worked before midnight at his place.
I live downtown, could it have something to do with higher traffic?
Or could it be some sort of security thing? .....

how could I narrow it down and fix it?

thanks,
Nate

Oh, yeah....the lighter socket adapter for autos is Cat. No. 173-1863 9VDC
Power Adapter with the same tip ("B"). And according to the cautions,
always unplug the adapter from the lighter socket first, then the scanner.
Tip polarity is "+" for both. BTW, check local laws for mobile scanners.

Make sure each of the control channels are entered in your scanner. I
think Columbus has 4. The FCCA system DOES rotate control channels.

Mint. $400, plus shipping. I'm on east coast.
To give you a feel of the power contained in this handheld gem, try
drooling a little over these specs :
100kHz - 2.04GHz receive
Triple conversion
1000 channels
20 scan banks
40 search banks
2050 search skip frequencies
FM, SFM, WFM, AM, NAM, WAM, USB, LSB & CW modes
Any step size between 50Hz & 999.95kHz in 50Hz increments
Preprogrammed bandplan
Scan/Search up to 37 channels/steps per second
Alpha-tag scan banks, search banks & memory channels
Memory operations (copy, move, swap, edit and delete)
14 segment S-meter
Band scope with 7 ranges (100kHz - 10MHz)
Voice squelch
Level squelch
Auto store
Adjustable power saver
Automatic Power Off (APO)
Sleep timer
10dB attenuator
Noise Limiter (NL)
Automatic Frequency Control (AFC)
Display and keypad backlight
Key lock
Adjustable key beep
Adjustable display contrast
Computer control
Optional slot cards

I have a radio from work mounted in my company vehicle. I'd like to have
a handheld on the same freq. so I don't miss calls when I leave the
vehicle.

Is it a matter of having a radio I can tune to the correct freq. or
would I have a radio that would work only on that freq. ? I prefer a
fixed freq. unless that costs a lot more.

Thanks,
Maxx

As far as know, the two top contenders (and there are be others, such as ScanStar) are ARC780 and TrunkStar780. I happen to use TrunkStar780; it does what I need it to do, support is good and it doesn't hog my PC's resources.

Ever wonder JUST WHY those manuals that
come with your new Yaesu or Kenwood are
so freakin BOTCHED UP in their presentation?

Ever wonder why Japanese products are
(in general) so kooky and quirky in their
"logical" operation and functionality ?

Well my fellow Americans, wonder no more !

This site explains it all for you, and has some
damm funny bits of classic Japanese "Engrish"
that will have you peen you pants with laughter!

ENJOY!

I have an old clock instruction manual in 'Engrish'. It's difficult to
understand but I got a real kick out of its abuse of the English language.
Some time I'll scan and post it.

There's a lot of funny things like this around. Like the sign in a
Tokyo (I believe) hotel that says, "Please feel free to take advantage
of the chambermaid."

The manual of our first Sony Color TV also came in Dutch.
Never had such a good laugh.
Even orse than the English version.
Still wonder why such large manufacturers save on a few bucks to have
their manuals corrected by a "local".

As a technical writer who desperately needs a job, I, too, have long been angry with the Japanese for their miserable documentation. * (The manuals with German products can be even worse, believe it or not.) I have repeatedly asked Sony to hire me to oversee English-language documentation, but have been repeatedly rebuffed.

In the early years of the Japanese consumer-electronics invasion, manuals were of much-higher quality. Whether this was because writing jobs were farmed out to the limited number of Japanese who spoke idiomatic English, or because the manuals were written/edited by the importer, I don't know. But I do remember buying a Nikon Photomic FTn body in 1970, with a manual written in clear, simple English -- probably by someone at EPOI. It was the first and last really good "Japanese" manual I ever saw / have seen. **

I once asked Ken what's-his-name at Denon about the problem. He told me Denon would send the manuals to him for review only a few weeks before shipping the product -- and would invariably ignore his corrections and suggestions.

There are several reasons why the manuals for Japanese and German products are so poor.

1. The most-fundamental is that the writers DON'T KNOW what constitutes a good manual! The Japanese are notorious for "tree" manuals -- where all the details are explained in excruciating (and sometimes pointless) detail -- without presenting the "forest" -- an overview of what's going on.

In general, the best way to explain anything is to start with the "general" and work down to the "particular." The Japanese don't understand this.

2. The Japanese worry about "losing face." They refuse to acknowledge they don't know how to write good manuals in good English. Accepting corrections or enhancements from foreigners is an even worse loss of face.

3. There is such a overwhelming flood of new products that there's no time to do good manuals -- even if they wanted to.

4. They don't understand that good documentation helps your company's image and, in the long run, reduces the money spent on customer support.

* About 10 years ago Mitsubishi tried to produce "good" English-language docs for their VCRs. The resulting manual was nearly 100 pages and hopelessly "overwritten." Whoever wrote it never read Thoreau.

** The manuals for my Yaesu amateur-radio equipment are written by the importer. There's room for improvement, but they're not at all bad. I hate to think what

they'd be like if the Japanese had written them.

I've heard that the Japanese school system is "broken" when it comes to
teaching English. That the textbooks have basic flaws and teachers trained
with these flaws. And that this produces students that are reasonably
consistent in producing similar screwed up English when they write
about the same things. And that nobody in the Japanese education
system wants to "lose face" by owning up to this.

A friend owns an advertising company, and he and his people need to
fix and filter the copy from his Japanese clients. But his clients have
already made the first step in realizing that they need help with that.
The ones that don't produce ads that make little sense to Americans.
American companies screw up in this as well, did you know that
the name of the Chevy Nova car means "no go" in Spanish. Thus bad
sales results in Latin America.

> 4. They don't understand that good documentation helps your company's image and,
> in the long run, reduces the money spent on customer support.

Good design of a consumer product would result in a product that can
be figured out without having to read a manual. Or at least good on screen
comments to walk the user thru the process of programming the VCR.
Including error messages saying "The programmed amount of time is
not gonna fit on the tape at 2 hour speed, should I 1) record the first
2 hours of the program, 2) change the record speed on the tape, or
3) have you change the program length?

My 2 cents, for what it is worth.

When traveling in Japan, I found that very few Japanese could speak English, even though it was a required second language in their schools. Our tour guide, who had been a middle-school teacher, explained this by saying that the schools teach reading and translating, but virtually no conversational English.

Compare this to the Chinese system, where all the young students strive to perfect their English. On the Bund in Shanghai, I was surrounded by young people who just wanted the opportunity of speaking English with a Westerner.

To get back to the manuals question, let me begin by saying that I spent 40 years in the technical writing business. Too often, an acceptable manual written in a foreign language is converted to English by a *translator*. (You will note my emphasis.) To translate anything technical into another language requires a technical writer or editor who is *fluent* in both languages and familiar with the discipline involved. Otherwise you get "Engrish."

Bob, W6NBI

When Sony introduced their CV-format 1/2" video recorders in the 1960s, Sony of America did its own instruction books for them -- complete with photos -- and the difference between those and an instruction book from the 1980s (or later) is like night and day.

I think I've posted this here before, but here it goes again. When I worked in sales in a store that also held an importer's repair service in the late '60s-early '70s, one piece of equipment we had still sticks in my mind.

A VOM with "HIOKI ERECTRIC COMPANY" carefully reverse silk-screened on a brass plate on the front.

Wish I'd have bought it.

it isn't really frequencies to decode. it is the type of data you want to decode. the radio era seems to be slowing down.no one wants to designa prog to decode certain data. a 2lvl FSK will decode some things . while a 4lvl FSK decoder will deocode some things that a 2lvl can't. I should say can't a 2lvl will only decode half of the signal.
Frequencies will vary on what you want to decode. Remember. lots is encrypted too.

I have the manual to my dad's F2S somewhere around here. Well written,
but a bit overentusiastic - "Hold the camera. Feel it's strength and
promise." "Nikon also makes binoculars - they're made from the same
excellent optics as your camera lens" But overall a great manual -
"Even if you're a professional, it's always good to review some
'basics', as yuou might have forgetten them over time"

I remember reading a Panasonic VCR manul that sugessted 'editing' a tape
by recording a dead TV channel over the parts you wanted to 'edit' out.
I somehow seem to think that by 'editing', they meant erasing the dirty
parts of the recording. Or they thought we were a nation of Nixons...

I use the general purpose Radio Shack 20-176 antenna mounted in my attic, connecting to my 9000XLT with a 50' run of RG-58 (it was all Radio Shack had the day I bought the rest of the stuff).

I see RF-9913 has much lower signal loss, and isn't real expensive.

Is it worth the $25 to upgrade the cable??? I've been dabbling in higher freqs, and looks like the RG-58 really takes a hit up there.

Ah, so (ahso?) that explains why some {most} of those manuals are written ass backwards! I never could make sense out of their manuals or their "language".

Actually, a friend of mine was living in Japan a few years ago. Yaesu's manual writer was retiring and suggested he - my friend - apply for the job. He did. He got it. He told me they use a computer program with most of the lay out already in format... it was only a matter of plugging in steps and so on. I'm not sure if he still works for them or not, as I have found out he is no longer in Japan, but on the west coast. But I did quiz him one day about why those manuals are so damned goofy.....When I get a new rig, I look to see what the buttons do and throw the manual in a corner. I waste more time doing it by the manual. I hate the way they bounce you back and forth in the pages like a ping pong ball to figure out a command or two.

An old Panasonic cassette deck service manual describing their new
"Relay Logic Controls" stated: Check reray one. If not reray one check
reray two.

If not reray one WHAT? :) I told the boss and he told not to make fun
of the japanese, that they don't really talk that way. I had to go get
the manual and show him before he would listen. Then he sat there
scratching his head trying to figure out what they meant.

Well, you can't come down too hard on the Japanese..At least they are trying. WE are the ones failing.
Our language is starting to suck more each day with some of the newer words or expressions coming about. And my pet peeve is, it seems "most" everyone can learn our language EXCEPT those who speak Spanish.. WHY is OUR country catering to them...You live here, you damned well ought to be able to speak and read HERE. If I went to their country, I would have to learn Spanish. I see our Social Security, Welfare and other agencies catering to them... If I'm not mistaken the last time I called the Social Security office I was met with Spanish "FIRST"...WHAT THE HELL? THIS IS AMERICA - an ENGLISH speaking country..... If the Germans, Chinese, Japanese, Russians and so on can speak English - broken as some of it may be, why the hell can't these people? Is it something in their system that prevents it:? Best part is, "WE" are allowing it to happen. Or it 's being shoved up our ass, one of the two.

In my earlier post, I did make a crack about the Japanese manuals being backward,.but then again if my memory serves me correct, they do read and write right to left. So, aside from me being a smart ass, I was not totally wrong (if my memory is correct) in how they do communicate in writing.....

To comment on the recent posts. I have a Japanese friend, who is here trying to get into UCLA's film preservation graduate program. He sent me his application essay for comments and corrections.

It was and is a well written and interesting essay about the differences between Japanese American culture verses other Asian American cultures, based on his observations as well as the research of the World War II internment.

He was somewhat surprised that I did not change all that much, and frankly, so was I. His written English is quite a bit better than his spoken English. Part of the problem is with simple articulation. He's much easier to understand in person than on the telephone, for example.

Most of my corrections involved verb usage and substitution of nouns that I thought were more precise for the context. And of course, as Truman Capote said in "Murder by Death", PRONOUNS! In a few instances, I rearranged sentences, but for the most part, I tried to refrain from that in order to preserve his words whenever possible.

A few things struck me. One was that the errors tended to be consistent. Another was that while he would often use a word that technically appeared correct, there was another word that would work better. Perhaps it is just the case that English has five words for the same thing sometimes, and the subtle differences between them in actual usage is very much an acquired thing.

This was an essay, not a technical instruction manual. It was about the equivalent of 3 typed pages, single spaced. It took me about an hour to do my "magic". Of course, part of my job is writing letter to clients about somewhat sophisticated financial instruments, and me and my boss often edit each other's work, so I am used to the task.

Still, I wonder, considering my lowly salary, how much could it cost for Sony or Nikon to run their manual by a technically competent native English speaker for editing? I'd do it for them. $500 a pop.

Regards,

DAve

Hi, Lou,

I wondered about that also, while living in California for a number of years. One day I went on a rant very similar to yours, and my boss at the time (and *NOT* a Hispanic American) pointed out that California originally belonged to Mexico, and was annexed by the US - and that therefore, Spanish was California's first language.

We have a similar situation here in Canada, and it's not unusual to hear tirades very similar to yours. However, there again it was merely due to the accident of history that the English-speaking army conquered the French-speaking army at the Plains of Abraham. I'm glad that the Quebecois had the strength and sheer stubborness to insist on equal treatment of their language and culture -- even at the "expense" of "having to put up with" French-language text on our cereal boxes. Canada is a better place for it. I think that the United States of America gains from the Hispanic, African, and European influences also.

Cheers,
Fred

Seems that in the Chinese language, the English pronouns "he"
and "she" map to the same Chinese word. Which can make for
some funny errors. A Chinese friend was telling me about his
girlfriend: "My girlfriend, he likes to dance...". "he"? I knew that
he wasn't gay or something like that, I recognized it as a translation
error.

I have heard that English has a very large vocabulary compare to most
other languages. Many words have been pirated from other languages.
Some Chinese guys I have worked with said that that large vocabulary
drove them nuts learning English. But each word has its own precise
and "flavor" and nuance. The SAT test uses an analogy format to
test your knowledge of this (but I've heard they recently dropped that).

I like my rg-213 more then my rg-58. all depends if you want that extra hard
to hear signal a bit clearer. you won't notice lots of difference between
144 Mhz and lower. but you will UHF wise.

As much Spanish language influence we have in the United States, I
find it interesting that most products designed for the North American
market have instruction manuals in English and French. To my
knowledge, Canada is primarily an English speaking country with the
exception of Quebec. Yet the instruction manuals for my TV, VCR, DVD
player, etc are bi-lingual in English and French with nary a word in
Spanish.

Hm.. curiouser and curiouser. But, come to think of it, it's probably
because bilingual instruction manuals are legislated in Canada. It
follows that it's cheaper to supply the same manuals to the USA, saving
the cost of a separate English-only manual.

I remember a time not-all-that-long-ago when manuals were routinely
supplied with English, French, German, Italian and Spanish sections,
sometimes additionally with Hebrew, Arabic and Greek.

Cheers,
Fred

Not even the francophones I know care much about that -- what they seem to want is their heritage and language protected at home and that sentiment is more consistent with a unilingual (sp?) policy, i.e. no English in French speaking communities (esp. Quebec); they fear that as more immigrants arrive in their communities, the immigrants will not adopt the French language and assilimate into the French heritage. Whether or not one can buy stamps in Alberta speaking only French seems irrelevant.

Bob, I totally agree with you on this.

I occasionally "translate" technical manuals from English to French
and vice-versa. My advantage is that I am fully familiar with the
discipline (HF communication systems and equipment). We used to farm-
out some of these and the results were simply horrible.

Regarding the subject at hand.

Perfect example why two bombs where not enough.

But on the other hand, a $300 scanner would cost $600 if manufactured in the US.

But by not learning and becoming proficient in the language that dominates the rest of the country, the people cut themselves off from the options that are accessible to the rest of the population. While being bi-lingual would be a great asset, the high paying jobs in this country require you to be proficient in English as that is the language in which you will need to conduct business negotiations. It is the language that the lawyer will need when he presents his case in court. Even in "ordinary" positions, it is essential. Receptionists even in areas that are dominated by Spanish in the US need to be good at English.

Thus is essential that people in the US learn and use English well. Otherwise they are limited in opportunities by language. The country does them no service by having them in elementary schools, etc that use Spanish for teaching.

The United States has benefited immensely from its melting pot culture. People can preserve their culture and languages in their homes and communities but also need to participate fully in the overall culture and

language to benefit from the immense diversity and opportunities of this country.

6182. RS And New Uniden Digital Scanners ?

Oh, BULL-loney. The Japanese aren't trying even remotely.

If the Japanese were serious about providing good documentation, they would turn over the work to their importers, or at least let the importers edit the material they've written. They don't.

The only manuals I've ever seen that "routinely" included instructions in multiple languages are those from Polaroid. The manual for the Macro 5 SLR is in English, French, German, Italian, Spanish, Japanese, and Russian. And that's _not_ very many languages for Polaroid -- some manuals include Arabic and Chinese.

When I took the SATs over 37 years ago, I wondered why I got "only" a 750 on the English part. The reason, of course, was the analogies.

I have a superb vocabulary and understanding of the subtle differences in meanings among words, but the analogies drove me crazy. They require making subtle distinctions in a very short time. I don't think they reveal much about anyone's vocabulary or ability to think.

I know this is all in good humour; eh?
But at this point, as a Canadian cousin, and since we are making
fun of 'Japanese English', I have to comment as follows.

1) If so; why do we buy so much Japanese electronic equipment?
Because it works well? Maybe?
I don't think we can plead 'slave labour rates'. Japanese
salaries/wages and living standards have been, at least until
recently, some of the highest in the world!

Have to agree that US technical documentation such as that
provided for equipment surplus, available publicly after W.W.II,
was/is among the best in the world. Usually well written and more
than likely well illustrated; in one language only, ENGLISH!
And despite the tremendous co-operation and help between the
Allies of those times there were jokes about it.
For example British Techs. had to be warned NOT to say something
was 'US' i.e. Unserviceable (or something less polite in
colloquial use!) and, in the interest of co-operation to use some
other more tactful terminology!

These days North American products, with exception of some
produced in Canada with French language on an equal basis, not
usually accompanied 'at all' by brochures/technical info. in
other languages! So we'd better be careful before pointing any
fingers?
BTW one can visualize a Japanese comment such as; "They don't
understand our technical manuals but they still buy our products.
Big time! Must be doing something right?".

2) Educationally similar criticism might be made of our 'North
American' school system in regard to subjects such as world
history, world geography and lack of knowledge of other countries
and cultures! In other countries it is sometimes perceived as a
sort of "If it ain't Amurican it don't matter", attitude. (The

poor grammar and spelling is deliberate btw!).
On other hand I have friends in Europe, which is very small, who do not realize that North America is 4800 miles wide; and think that you can hop over from say Boston on the east coast to Vancouver on the west in a few hours drive! they also confuse Canada with the United States!

3) Japanese make good motor vehicles too. Although my last (new) Toyota partially made/assembled in USA was not as good as my other Toyotas made in Japan itself. We now drive Nissans. I can't recall what percentage of the North American car market is now made by Japanese based companies? It is high in spite of tariffs and trade barriers! Documentation is OK. Some good maintenance and repair documentation for our Japanese vehicles has been available, in English, from Britain!

And just to put the shoe on the sole of the other foot; ever see an unpractised 'westerner' (say myself) try to use chopsticks? Pathetic! Please may I have a fork?

Cheers. Terry. Newfoundland, Eastern Canada; settled by the Vikings at 'Lanse Aux Meduse' around 900AD!

Also a few miles from where Marconi (An Italian btw) received the first Transatlantic wireless telegraph signal from Cornwall, England in 1901.

Very true,, and by 2005-6 there will be no more anolog cell period.
The FCC has stated that by that time frame all analog will be gone
and replaced with all digital. The next 3-4 years will be the phase out
period. They havent even manufactured analog cell phones in years.

Hi there,

I am considering purchasing a Uniden BCT-7 for use in my vehicles when traveling. I am also considering using a CB. I am wondering if anyone has any experience with this unit. I am wondering which antenna parts I will need to make it work properly. Will a simple magnet mount antenna do the trick? Can I use the same antenna for both the CB and the scanner or will I need an antenna for each.

Any help is greatly appreciated.

Jim,

I've had a CB and a scanner in my car for just about 10 years now though to tell you the truth I hardly use the CB any more. I do listen to the scanner all the time. The CB antenna is pretty useless for a scanner. There are plenty of mag mounted scanner antennas out there. Most are in the $20-30 range and pretty decent. The one I prefer is from Hustler (I even use it with my base scanners, stck on the baseboard heating system).

Bob: Excellent explanation IMHO. And I recall a story (apocryphal
maybe?) about attempts to translate a Russian technical treatise
about a hydro electric project, into English using a computer.
Right in the middle of the text appeared the words "Water sheep".
Puzzled they ran it through the computer again. Same result!
So they got hold of a technical expert (like yourself) who really
could understand Russian. "Oh that's simple" it was explained.
The translation is really "Hydraulic ram". Yep. Makes a lot more
sense doesn't it?
Now don't go 'crackers' laughing at this. Terry.
PS. BTW Bob, I tend to use the 'English' rather than the
'American English' speller-check on this computer. You should see
some of words it doesn't like!

Hi Lou: (You are probably named after the kings of France? e.g.
Louis 14th.)
Alternatively an English/Welsh version of your name could be
"Lewis" or "Lew".
In Spanish; "Luis"?

Quote: {WHAT THE HELL? THIS IS AMERICA - an ENGLISH speaking
country......} ?????

Some people would dispute that! :-)
However the beauty and flexibility of the 'English language' has
been it's ability to adapt, change, and take in new words from
other languages and cultures! And it survives as, at the moment
anyway, lucky for us Anglophiles, the predominant business
language of the world. 'American English' is one version; a very
important one.
If we heard the 'English' of Shakespeare or Chaucer as originally
written we would not understand it.
More recently; for example the word "Bungalow" is from India.
Other words, such as "Quota", "Forum", "Constitution", "Voter",
"Senate", "President", etc. are derived from Latin, Greek etc.
French words very little changed have entered the language; quite
apart from the newly invented ones of the electronics and
computer eras.
We might as well get used to it! Welcome to the rest of this
multicultural world!

Bonne Chance. (Good Luck).
PS. "Bonne Chance" is also the name of a hostelry in New Orleans,
btw.

Which is why cultural background can have such an influence on
results. Imagine trying to explain 'reaping' or 'making hay'
(literally) to a person of the Innu (Esquimaux/Eskimo)
culture/background who has never seen grass or a cornfield. Or
the concept of a snow machine to someone in the Sahara desert,
say, who has never encountered snow! The Innu have as many words
for different types of snow as we have for different types of
cheese!
Imagine trying to explain 'radio antenna', 'transistor',
'battery' etc., to someone living in the Amazon jungle.
Another example: Some words/expressions are culturally taboo.
The term 'Knocking up' has entirely different meanings between
North America and Britain, for example.
In Britain it refers to waking people up on a workday morning by
knocking on the bedroom window! The other (North American) usage
will leave to reader's imagination.
But thank goodness we are NOT all the same. Even those of us who
all think we speak 'correct' English!
Have fun chaps! Terry.

6195. 800MHz Police Question

Newsgroup: rec.radio.scanner
Date: 2002-12-15 17:11:36 UTC
From: Water Ouzel <ouzel@freerivers.org>
Message-ID: <cJ2L9.71365$hw3.10199@sccrnsc04>
Source record: 40334

I have a disabled relative who keeps themselves amused listening to their scanner, however, they complain that they don't have the new 800MHz band capability which the police are presumably using in Atlanta. The question is, would a new scanner offer them much of interest to listen to, or are the police (or fire/emergency) all using encryption now and it might not be worthwhile.

Thanks for any responses.

A non-scanner poster.

Service announcements on the NYC subway can easily be nine languages,
depending on the line. Also, advertising can run through a few. I've
even seen cyrillic billboards in parts of NYC.

The #7 subway line has something like 120 ethinc groups along it's
route. It's supposedly the most diverse part of the world...

Many people in the NYC area are bilingual, or even trilingual. I work
right next to the NYC border and there's at least 4 different languages
spoken in our shop.

Well, the pronunciation is the same, although there are separate written forms for "he", "she" (but I got the impression that it is of recent origin), "it" (inanimate object), "it" (animal), and deity.

What is your opinion of the Quebec language laws that make it a crime to speak English in the workplace, Illegal to have an English language sign in the window of your business, and illegal to have an English language internet site even if all the business done by your company is in English. Unless a person can prove that their parents had English as their mother tongue their children must be educated in a French school.
French in Quebec is much more than the language on your cereal box. Being an English speaking person in Quebec is almost a criminal offence.

I recall a letter in one of the L.A. newspapers many years ago from a Japanese-American who had come here as a child speaking only Japanese. He strongly protested the concept of bilingual education if it meant that one could graduate from high school without a decent knowledge of written and spoken English.

My wife came to the US from the Netherlands when she was 9 years old, which was still early enough to acquire a perfect English ("American English," anyway) accent, although some odd Dutch idioms translated word-for-word into English pop out sometimes. There was no "bilingual education," but there was a Dutch-speaking teacher around who was able to help her.

I am a great supporter of bilingual education in the form of "immersion programs," no matter what specific language is used. We know one man whose daughter (Anglo) was in a Spanish immersion program in Oregon and had all her science and math taught in Spanish all through high school. Our school district is now proposing a similar move (language not yet decided -- depends on who is available), but there is much opposition despite the rich variety of languages spoken here (Long Island, NY). I say that it should have been done long ago, and I don't care whether the second language is French, Spanish, Chinese, Japanese, Korean, Hebrew, Greek, Hindi, Swahili, or....

Q. What do you call a person who speaks three languages?
A. Trilingual.

Q. What do you call a person who speaks two languages?
A. Bilingual.

Q. What do you call a person who speaks only one language?
A. American. ("British" is another acceptable answer.)

There is alot of truth to this. Our firm did a stint for Subaru as a
Consultant
once. Cost them big $$$ for our servicers. They took the reports
and suggestions (three volumes worth, each the thickness of a Manhattan
telephone directory..) and sent them off to Japan. That was the last
we saw of them. They paid us but it's tad frustrating to think that a Year's
worth
of work is sitting collecting dust on some shelf at Subaru (Fuji Heavy
Industries) HQ in Tokyo. (I just hope they don't "reverse-Jinglish" it -
mabey
that's why it's taking so long? - grin)

In my opinion that's ludicrous, of course. Even thinking francophones
are appalled by such reactionary policies.

I spent a summer working in Ottawa a number of years ago. On several
occasions I made little day trips into Quebec. The hostility would
sometimes be palpable when I'd ask for something in English at a
convenience store -- until I explained in my broken French that I was
just a dumb westerner, or pointed to my BC license plates. Then all was
well, we'd share a laugh, and magically my new-found Quebecois friend
would demonstrate a workable command of English.

The point of the story is that in situations where there has been a
long-standing conflict, everything is perceived in terms of that

conflict, and anyone walking into a francophone convenience store and speaks English "must be" a jerk by definition. But when the realization hits that this is an outsider to the conflict, suddenly the conflict loses its hold on the situation.

Cheers,
Fred

Yes, several years ago, visiting my grandparents in their apartment
near Brighton Beach in Brooklyn, we were talking with one of their
neighbors.

She mentioned that besides English, she could speak at least somewhat
in Italian (her heritage), Spanish, and Yiddish, and figured she could
get by in most parts of the city.

In a diverse environment, it's not a bad idea to learn a few basics in
the other languages. You don't have to able to write poetry in the
other language, just be able to order a meal.

For all the noobs out there who haven't tried it, get an external speaker for your base scanner.

I had an extra Klipsch Promedia PC speaker sitting around. Hooked it up to my 9000XLT. It absolutely blew me away.

Sounds soooooo much clearer.

Especially at higher frequencies, ANYTHING is probably better than RG-58. 9913 is just one form of the RG-8 type of coax. It should certainly allow more of the higher frequencies to reach your scanner. Any type of RG-8 "Foam" dielectric cables would be good. Don't get the regular Polyethylene dielectric type as the loss in it is much higher. You can tell the difference because polyethylene is generall a clear substance and the foam dielectric is white opaque type. There are other good choices too. LMR Times makes some good stuff too.

Kim
The new phones today cannot be scanned. They produce a digital signal
that produces no more than a hum on a regular scanner. The old car
phones were no more then radios. Cell phones of today are a little more
then a radio. Basicly they are a radio that uses a digital mode. I 'm
not sure but I think that it also uses a 128 K encryption so it would
take your pentium 4 computer about a day to decode the signal. A waste
of time!

that is what I love about canada. We are mostly digital. But Here in the hills. Digital only goes so far. Any fringe area, The Mall. A building. etc. We auto go to the analog signal. But this is only Places where I have been. From BC to saskatchewan. I even see lots of people swear their phone is always digital. I tell them to look on their display at that persice place. Opps they were analog. Canada Does not charge for analoge. If you get a pay as you go phone or even a contract. Digital and Analog are included. Most of Saskatchewan is still analog too. But they have some digital features. Heck. even west edmonton mall was mostly analog. I ain't flaming or anything. but here. there is still lots of analog activity. Even though people insist that they are tx'ing on digital. I guess that is what I get for Living in BC.

The new phones today cannot be scanned. They produce a digital signal that produces no more than a hum on a regular scanner. The old car phones were no more then radios. Cell phones of today are a little more then a radio. Basicly they are a radio that uses a digital mode. I 'm not sure but I think that it also uses a 128 K encryption so it would take your pentium 4 computer about a day to decode the signal. A waste of time!

I recently purchased a new Icom 8500, the box was not sealed. I do not beleive any Icom products are sealed. You have to trust your dealer. I have a great local dealer.
I do not know about AOR stuff.

Don't hook a scanner and CB to one antenna, as transmitting on the CB will burn out the scanner if they're both connected.

Better to have separate antennas for each, preferably a ways apart from each other.

Ditto on what those guys said about CB... go with FRS (or MURS or -
better yet, Ham radio, don't need Morse Code any more.)

I've been very happy with the performance of Radio Shack's venerable mag
mount "all band" scanner antenna, model #20-032 - see it at
http://shorterlink.com/?6ZI1OY - it works quite adequately from VHF
low (even CB) up to 800 Mhz.. I've even used it for transmitting with up
to 50 watts with my ham radios, but don't recommend doing it for very
long... can heat up the radio since it's not an ideal match. I've been
using these for at least ten years. Not terribly pretty, but they work

And the BCT-7 is pretty handy for a "traveling" scanner - even today
its' pre-programmed frequencies are still OK... though the 25-channel
"private" banks are useful too. For hard-core listening, a
keyboard-programmable scanner is a LOT easier, but for tooling down the
highway the BCT-7 is pretty good.

I've never had good luck using one antenna with two radios (of any type)
simultaneously. There are combiners and splitters out there, but
they've never done me much good. Use a separate antenna for each.

Oh, another real handy cheap gadget is a window-clip antenna mount (NOT
a thru-the-glass thing), part #200-0023 - you can use any radio's
"rubber-ducky" antenna on it.

No disrepect, but if you had said you were from Ontario, you would not
have been sharing a laugh. And there's nothing about Ontario that makes
it any different than BC, except it's closer to the Quebec border.

I think that the illegal English sign thing is just if the sign is English
only (no French). In Montreal I saw English/French signs on buildings.

Syl, what's the real deal?

Our son is studying French ("standard" French, not Quebec French) in
school (Grade 8) so we thought of taking part of our last summer
vacation in Quebec and give him an opportunity (and me -- but it's been
a looooong time) to practice -- until we ran into a native French
speaker (of "standard" French), who told us that the speakers of Quebec
French hate speakers of standard French almost as much as they hate
speakers of English. So we settled for a vacation in New England instead.

I worked for a retail/mail order radio dealer... could EASILY have
gotten $400 for it if it's got no problems, has manual etc.

I'd put it on Ebay (do a 10-day auction) which is really a seller's
market. Only problem there is that Ebay doesn't allow "unblocked"
scanners, so you have to word your ad right... perhaps say something
about "email me for more info."

I don't have any specs in front of me, but as far as I know the 780XLT is quite a bit better for sensitivity, but the 2006 probably better for selectivity & intermod rejection. If you're in a high RF area I'd lean toward the 2006, if suburbs/rural then the 780. As long as you don't need the trunktracking, of course... if so, it's gotta be the 780.

Just my opinion. YMMV

All my Icom purchases were sealed. Tuners, rigs, antennas, accessories. they have a little round seal that overlaps the entry flaps about the size of a quarter, and says "passed and tested", with two x inch long Icom logo tapes over each end edge.

It's because Canada is officially bilingual, no matter what the
demographics say in practice. It is illegal to sell stuff without
bilingual labelling. It's cheaper for manufacturers to make one
set of docs, in compliance with necessary law, than two just to
make things practically better for their customers. The only way
for the spanish to be catered for is for the US to be officially
bilingual. (I wouldn't hold my breath).

Similar to the problem in many latin languages, where the
adjectives like "his" or "her" agree in gender with the
noun, not with the possessor. So common slips might be
to say something like "his shoes" referring to a woman.

The legislation (I recall it as being Bill 101?) is actually that
signs displayed in English must also have a french equivalent, and
the english may not have larger font or brighter colours.

>and "flavor" and nuance.

It's very true. You can see the roots of this in things like
Dutch [and Afrikaans] which I find have far fewer words with
the fine distinctions, and that most words have obvious roots
in simpler combinations ["shell-frog" is a turtle?].

It's not that English has pirated the other languages, but that
it evolved (very recently, i.e. last 500 yrs) from a lot of inputs
thanks to all the invaders. (Roman, Norse, Saxons, Normans each
giving their input). Consider that the coarse, "animal" terms are
Saxon while the fine, "cuisine" terms are (conqueror, "lingua
franca") Norman, for example.. (cow vs beef). It's all a matter
of development and how many ingredients went into the soup pot.
Anyway, I think it's far more exciting to have a surfeit of words
than an excess of rules. [e.g. 16 verb tenses in Finnish?]

Japanese lacks a future tense, but has no particular difficulty
conceptualizing the future. You just throw in a postpositional phrase
describing the time frame, and then the verb is interpreted relative to
that frame rather than the present.

English has a large number of verb tenses, which allows very fine distinctions -- "Had the airplane arrived on time, I would have been on my way to California at this time."

>
> Just my opinion. YMMV
>

I have both, the PRO-2006 and BC780's. There is no compairing these radios! The BC780 will blow the 2006 away in a heartbeat. Granted the 2006 is a great radios for rejection and sensitivity. But I use both for monitoring MilAir comms, both strong and very weak signals. The 780 will alway come out on top!

I've got 13 scanners in the shack (5 of which are BC780's) and out of all the different types (7 different types) the PRO-2006 is in second place. The 780 will always out do them all.

Another important feature of the 780's is scan and search speed. The PRO-2006 was the hot radio of its time but by todays standards is slow in the scan speed department.

Its funny to see PRO-2006's going for $300 on eBay used and see people buying them. For the sensitivity, selectivity, rejection, speed and not to mention features the 780 is more than twice the scanner as a 2006 is. Lets face it, the only reason the PRO-2006 still keeps the attention of scanner hobbyest today is the fact it can receive cell phone calls, if it weren't for that most people wouldn't know what a PRO-2006 was....

I'm surprised you didn't throw a future conditional into that one...
"... I shall have been in California". ;-)

(Not sure if I could even still rattle them off. Future conditional was
just so weird I remembered it all these years.)

Cheers,
Fred

How does one say McDonald's or Pizza Hut, or Radio Shack in French?

The tunnel connecting Britain and France across the English Channel
was in controversy not long ago from what I remember. Seems on the
French side, signs said, "Le Tube." This was apparently looked upon
as bastardized English rather than French.

I do admire the French for being so protective of their language and
culture. To do so here in the United States we would be labled as
racist. Then again, the United States doesn't exactly have a dominant
culture.

MY sentiments EXACTLY!!!!!!!!!! There are Filters in your computer to tune out if you don't want it. Some people haven't gotten that hint yet. I've been asked by others when I've used that remark, "what if the newspaper became "all ads" ". Well, then I would suggest "switching" or starting your own where you "have" control..... As for the rest of us, leave it as it is.....

Until this person posted his adversity to the Radio News, I had not seen ANYONE else protest it, nor have I since. There was a clown did the same with FA ads in another group where FS and FAs are welcomed.

USE YOUR FILTERS if you don't like it.... SHEESH! Damned cry babies. Too freaking lazy to do something to make life better. I suppose you get someone else to hit the remote button too when you don't like the channel you're watching, or turn the page of the paper, magazine or book when you don't like what you're reading..... Those would remain the same, since they're trademarks. However, if you
were to try to advertise "Order a pizza straight from the comfort of
your radio shack" (meaning your shop) you'd have to call it "chalet de
radio" or something to that effect. ;-)

Cheers,
Fred

a sample of the english language ...

So, YOU THOUGHT YOU WERE TOUGH ENOUGH TO TRY TO LEARN ENGLISH?

This little treatise on the lovely language we share is only for the brave. It was passed on by a linguist, original author unknown.

Peruse at your leisure, English lovers.
Reasons why the English language is so hard to learn:

1) The bandage was wound around the wound.

2) The farm was used to produce produce.

3) The dump was so full that it had to refuse more refuse.

4) We must polish the Polish furniture.

5) He could lead if he would get the lead out.

6) The soldier decided to desert his dessert in the desert.

7) Since there is no time like the present, he thought it was time to present the present.

8) A bass was painted on the head of the bass drum.

9) When shot at, the dove dove into the bushes.

10) I did not object to the object.

11) The insurance was invalid for the invalid.

12) There was a row among the oarsmen about how to row.

13) They were too close to the door to close it.

14) The buck does funny things when the does are present.

15) A seamstress and a sewer fell down into a sewer line.

16) To help with planting, the farmer taught his sow to sow.

17) The wind was too strong to wind the sail.

18) After a number of injections my jaw got number.

19) Upon seeing the tear in the painting I shed a tear.

20) I had to subject the subject to a series of tests.

21) How can I intimate this to my most intimate friend?

Let's face it - English is a crazy language.
There is no egg in eggplant, nor ham in hamburger; neither apple nor pine in pineapple. English muffins weren't invented in England or French fries in France.

Sweetmeats are candies while sweetbreads, which aren't sweet, are meat.

We take English for granted. But if we explore its paradoxes, we find that quicksand can work slowly, boxing rings are square and a guinea pig is neither from Guinea nor is it a pig.

And why is it that writers write but fingers don't fing, grocers don't groce and hammers don't ham?

If the plural of tooth is teeth, why isn't the plural of booth beeth?

One goose, 2 geese. So one moose, 2 meese? One index, 2 indices?

Doesn't it seem crazy that you can make amends but not one amend.

If you have a bunch of odds and ends and get rid of all but one of them, what do you call it?

If teachers taught, why didn't preachers praught?

If a vegetarian eats vegetables, what does a humanitarian eat?

Sometimes I think all the English speakers should be committed to an asylum for the verbally insane.

In what language do people recite at a play and play at a recital?

Ship by truck and send cargo by ship?

Have noses that run and feet that smell?

How can a slim chance and a fat chance be the same, while a wise man and a
wise guy are opposites?

You have to marvel at the unique lunacy of a language in which your house can burn up as it burns down, in which you fill in a form by filling it out and in which, an alarm goes off by going on.

English was invented by people, not computers, and it reflects the creativity of the human race.

I'm not aware of one, but you might like to know that they're hardly
the only game in town. In fact, they're not even the most
interesting. There are something like 50 agencies with official
police powers. The City of Washington DC Metropolitan Police Force is
only one of them. You can pick and choose your favorite, from the
national park service, to the Secret Service, Capitol Police, FBI,
Military Police (for places such as Walter Reed Army Medical Center),
ATF, Dept. of the Interior, EPA, and so on and so forth.

I wish I was making this up.

On thing you _can_ do is to buy from a dealer with no return policy.
But it's not an absolute guarantee, though.

If you _do_ buy from a dealer with a return policy, you
got to ask yourself the question : 'I wonder what he does
with all the returned receivers ? Does he throw them away
or does he repack them and sell them again ?'
Once you have answered that question, you know that there
is no guarantee the receiver you get has not been out before.

> They don't even bother with Arret in France.

Those signs, in the UK, back in the 1940s and 50s, used to be
labelled "HALT".
Again only four letters to convey the intent.
Much more commanding I thought than a wishy-washy sort of "please
'STOP' here"!
Wonder what they say today?
And in France they don't seem to be so preoccupied with
protecting 'La langue'!
So you get 'Le Rost Bif' and 'Le footbal' etc. Meanwhile we enjoy
'Crepes' and 'Pie a la mode' etc.
Cross cultural stuff like that!
BTW I never knew why British castle gates were protected by a
'Port Cullis'; until I saw a sign in French Canada warning about
sliding doors 'Porte Coullissant'. (Don't trust my spelling btw
in either language!).

I went for the sale flyer and thought I'd had a bit of cranial flatulence;
it didn't seem like mid-November when I bought this phone. But I just
went to the site, and on the very first page was "2.4 GHz DSS Cordless
Systems / FREE extra handset offer". They are indeed still selling the
43-3815 (with ans. mach.) and 43-3529 (without) at those prices, with
a free extra handset (43-3538).

Don't look at me. I gave up a long time ago. I don't believe the stuff
belongs here, especially considering that at times it constitutes 20%
of the articles in the froup, and some of the posters don't even
participate in the discussions but just come to advertise.

I especially don't complain to eBay any more. Their growth was entirely
dependent on having their sellers spam the newsgroups (ALL the newsgroups)
and they knew it. This is the first indication I've ever heard of them
taking *any* action at all.

One of my wife's oldest friends is a lady who came from Italy at third-
grade age. This lady claims not to speak Italian (though her parents
speak no English, and she visits them frequently). I can't resist playing
tricks on her; I'll start a conversation, and at some point I'll say
something in Italian, she'll answer in perfect Italian without a thought,
and when my wife and I point out that she did so she'll deny it, believing
firmly that she spoke nothing but English.

One question. On a recent trip to Ottawa, I noticed of course the bilingual treatment of most everything. I though "Okay, there you have it". But then one day we made a side trip to Hull, right across the river. The English dissapeared at the border, and French language was the only thing we saw after that. What is with that? Does the bilingual treatment only go one way?

If I lived in an area that the main language was (whatever) you can be darn sure I would learn the language. My kids would know the language too.

You're right, of course. I guess it depends when you start counting.
California had of course been invaded... er.. "colonized" by the Spanish
long before the Anglos appeared, thus the Spanish language was by that
time already well entrenched.

It does in Hull. ;-)

I suspect that this is one of those knee-jerk reaction things. Ottawa
being the seat of government of a predominantly English country, in a
heavily English-speaking province, I guess the Hullians (Hullites?
Hullois?) feel they have to make a point.

> If I lived in an area that the main language was (whatever) you can

you can try www.shoutcast.com and do a search for scanner and help yourself to
live web broadcast , my scanner is online most of the time too .

Yes, but the gender agreement is with the person, not the object.

Actually in that case, the the gender is determined by the object in question, not the person it belongs to: for example "la cartera" (the purse) is "La cartera suya" but it's gender neutral when you say "su cartera"

Both mean "your purse"

Now that you mention it, I do recall an Icom sticker on some of the accessories that I have purchased. Things like filters. However, I just looked at the packing materials for the last 3 Icom larger items I purchased, and there is no evidence of any seal having been on the bags. These were an IC-746, IC-706MKIIg and A-4. I bought these from HRO at a hamfest, and I am certain they were brand new. I don't recall any stickers on large items shipped in the new style brown boxes. Was probably true back when they used blue and white boxes.

Ah, but when us Brits rule the world (again!!) we can teach you all to speak

PROPA INGLISH, LIKE WOT I DOES!!!

Of course you have the Welsh situation here where, for some strange reason,
English people go to Wales on holiday and wonder why the locals are speaking
Welsh (oh yes and when the English go to France on the shopping day trips,
why the French shop assistants are not speaking english.

Still when the revolution comes.... we will all speak..... ENGRISH!!!

It depends what you want to listen to. The BC780 is quite deaf on 800 MHz but does have trunking ability which the PRO-2006 does not. I don't monitor AM mil-air here but for conventional FM scanning on the public safety bands, I'd choose the PRO-2006 for its better dynamic range and comparable sensitivity. The basic receiver in Uniden scanners is not particularly good. Where Uniden excels is in the features the radio has. There are plenty of older scanners that receive cell frequencies and that is not the reason the PRO-2006 is sought after despite what others may say. It still out performs the radios in current production for basic PSB monitoring and that is why it is in demand.

I think the U.S. government advisors in Vietnam in the pre-war days
ran into this problem in trying to communicate technical terms that
didn't exist in the Vietnamese language to their native assistants, so
they got around it by teaching them the English word.
Mike.

My 780 is also far from deaf on 800 MHz, I can monitor the Orlando Trunk system from Daytona Beach, well over 40 miles away! The PRO-2006 can't even hear the control freq...

Reguarding 2 meter band again my 780 has an edge over the 2006 regarding sensitivity. Same true for the 138-144 Mil Band.

Another thing about the 2006 is that it will interfer with other scanners the shack, not an issue if you only have one scanner. However with the cheesy plastic case the 2006 is in doesn't offer much in the form of RFI protection. Got 5 BC 780's and they don't interfer with anything with their solid metal cases....

It seems like a 2006 used will cost you about $300.00 while a brand new 780XLT can be had for $325.00. The prices of the 2006 are overly inflated regardless of the reason...

Have you measured the 20 dB quieting sensitivity? If not, then you don't really know. There is a chart of measurements at http://209.145.176.7/~090/awh/bc-780xlt.html. The spot checks I did on my own 780 are in agreement with the data there. The actual reception is in line with the numbers so everything is consistent here.

To George, your experience is directly opposite mine. Maybe your 2006 is out of alignment.

The 2006 and 780 can both be recommended depending on what you want to hear. There certainly are situations where the 2006 would be the better choice. I own one of each and am keeping them both. Peace.

I understand the dielectric constant effects the capacitance- its value- this
doesn't answer why the cable would have lower loss though.
I know the answer- trying to see if someone else does.

Message-ID: <ELvL9.28410$6z5.16822@news.bellsouth.net>
Source record: 40243

Yes, with a new scanner coverng 800MHz
they could listen to a number of things including
Fulton County PD, FD, Grady and rural EMS,
Roswell PD and FD and Alpharetta PD and FD
(which happen to all be on the same 13 trunking
frequencies).

One idea is to go to Radio Shack and get a
Pro-95 handheld, $149 on sale right now (was
$249). It's got some very good reviews and
appears to be a bargain at that price. Use
Google to serach for key words Radio Shack
Pro-95 and Review.

Oh yeah, if you get the scanner, go to this web
site for Atlanta frequencies and fleetmaps:

http://www.scanatlanta.com

This is quite different from the methods that were used to teach English names of objects in certain Native American languages. A number of tribes came up with their own words for the "modern" objects they became familiar with through contact with European settlers. These objects were often described by using agglutinations of already-familiar words and terms in their own languages.

Oftentimes, this would make for a relatively large phrase to signify something that could described in English by using a small word or phrase. For instance, the Ojibwe word for "blueberry pie", which was something that wasn't familar to these folks in pre-European-settlement days, became this:

Miinibaashkiminasiganibiitooyingwesijiganibakwezhigan

Which, when translated from the Ojibwe, means this: berries smashed together between layers of bread.

Please don't ask me to pronounce it. I'll have terrible flashbacks to a couple of exams that I had to complete by giving spoken word translations of several Ojibwe phrases.

When I was living in Taiwan and learning Chinese (Mandarin), I bought some of the local computer magazines and started looking up phrases in the dictionary, but when I used some of these terms in talking to my teacher, she often looked quite puzzled. It turned out that she was accustomed to using the English word (e.g., "printer") instead of the Chinese term (which translates literally as "print form machine").

True. Speaking of different cultures...

...what might be interesting (maybe) to some of you, as long as we are on the off-topic but quite engaging subject of languages, is the fact that American Sign Language (which is also used as the primary communication of the Deaf in Canada) and French Sign Language are intimately linked.

The first teachers in 19th century American schools for the Deaf were from France, namely Abbe Charles de l'Eppe and Laurent Clerc. Much of the sign language in the US (and later Canada) that developed amongst the students who were educated in the American schools for the Deaf was a strong amalgam between their own, native sign usage and French Sign Language. Even today, more than 1/3 of the signs and phrases in American Sign Language are direct offshoots of those from French Sign Language.

If a native ASL user were to go to Britain or Australia, they would find themselves lost- since those nations use an entirely different forms of sign language from ASL (actually, Australian SL is related to British SL- which is entirely different and unrelated to American SL).

We do?

I wish someone would tell that to the CRTC! (For you non-Canadians that's the government agency which controls the music our radio stations can play and dictates that if I watch a TV program on a U.S. network which is also on a Canadian one the U.S. one will be replaced with the Canadian one for the duration of the program; so that I cannot be seduced by U.S. advertising.)

Oh yes, and then there is the religious nonsense when something like the memorial service for the victims of the Swissair disaster is ordered not to make any reference to Christ.

But, other than that sort of stuff we can listen to what we want, and if we don't like what we hear a simple call to the CRTC and the offender will be punished - thank God (oops sorry can't use that word) for Short Wave Radio.

Are you sure? I always thought that the cable companies did
this unilaterally (perhaps receiving payoffs from Canadian
networks).

The 1970s Jap manuals still rule.....

From a Honda motorcycle repair manual:

"You must work diligently to ensure that the gearing assemblies come
together in a harmonious fashion".

Translation: Make sure the gears mesh.

From a TEAC reel-to-reel tape recorder owner's manual:

"Do not attempt to perform a repair function on the subject mechanisms
unless you are technically minded well"

Translation: Don't mess with the innards of this thing unless you know
your s__t.

And just so the Germans don't feel left out....A quote from a beer keg
tap instruction sheet:

"Please make doubly certain that the containing vessel is chilled to a
precision temperature prior to utilizing the tap, and thus we will
have a royal beer!"

Translation (As if one is needed): Make sure your beer is cold!

Dale, you've already told me your answer, and I've given you mine by email, but to the above question, I would hazzard to guess that a higher capacitance would act as an RF "short" from center conductor to shield, so that the more internal capacitance, the higher the loss.

Actually, we were taught in school here in Southern California that the
treaty which deeded California to the United States stipulated that
California would have two languages, English and Spanish.

Keep in mind that immigrants, particularly women who did not work
outside the home often did not learn English before the advent of radio.
After radio, there was not much excuse!

I don't remember what the signs said when I was in Britain in 1977,
but I do remember my mom doing something really stupid while driving
her rented English Ford, and getting stopped by a cop. The cop pulled
in front of her to get her to stop, and the cop car had a top sign on
the roof which alternately said STOP and HALT in big flashing letters.

He let her off with a warning, BTW.

As far as Vietnam goes, the government had a list, explained in my slang dictionary, of "counter culture" terms that had come into popular usage during the 1960s. Soldiers returning to the US after having been overseas for a tour of duty were having trouble with the language of the country they grew up in because so many new words, or more properly, new meanings for old words had come into being. The army recognized the problem and made up a list for returning servicemen.

Just listen to how people speak, in normal, informal conversation, on old radio programs or movies and compare it to how language is used today. English, at least, is a living and evolving language.

Regards,

DAve

Bill, that is because, at least with Mitsubishi and JVC the manuals
are written by engineers, NOT by technical writers.

>
>In general, the best way to explain anything is to start with the "general" and

Yes, that was a LONG battle to get the Engineering Group in Japan to
accept the idea that a lowely American could actually produce an
English language manual that was better than what the Japanese could
produce, but once we got that hurdle scaled the other overseas
locations (including Canada) started using our English language
manuals as a base for their manuals.
>
>3. There is such a overwhelming flood of new products that there's no time to do

Ahhhhhh, THANK YOU so very much for vindicating what I told the
Marketing Manager for VCR Products in 1991: THE worst one of the bunch
was the HS-U82 VCR Manual. You could damn build the VCR from the
Instruction Manual!! Hell, the User Manual was bigger than the
Service Manual (which I did). Just for the record, the Marketing Dept.
had those manuals done by an outside MARCOM firm whose name escaped
me.

If buying a receiver that will only be useful for the next few years
is a bad idea, people should stop buying trunktrackers.

When 700 MHz opens up, public safety will flock there in droves to get
away from the interference Nextel causes on 800 MHz. At that point
the current trunktrackers will be useless.

In most cases, yes.

However, to make your mind reel even more, sometimes
the typically "masculine" article "el" is used instead of the more
femenine "la":

Here are two examples: EL agua (the water), EL ala (the wing). To say "la
agua" would be incorrect.

They won't be flocking anywhere unless they have money for it. Most city budgets wouldn't begin to be able to pay for such a move.

Do you think Motorola is gonna give them a break?
Right...

>How does one say McDonald's or Pizza Hut, or Radio Shack in French?

Dunno. I expect they don't have Pizza Hut or Radio Shack,
and McDonald's is just a name so not really English. But
anyway, French Canada is far more protective of the language
than France, even through the French have a council for
protecting the language and ensuring things like "ordinateur"
are used instead of "le computer" etc.

I do not believe that it is appropriate for a scanner related newsgroup but better served in the actual ham groups and like to read it myself there.

It does not take that much bandwith, and for those who cannot seem to figure out how to use a "kill file" or "blocked senders" function, well, I guess its their problem.

Overall, these newgroups are a public forum, not private email and people need to remember that.

Keep them coming as far as I am concerned.

Uniden BC200XLT handheld scanner. Clean, rarely used. Works great, just don't have much need for it these days. With leather case, charger/power supply, antenna, manual, all in original box. Batteries are dead, but I'll replace them. $ 135 + 1/2 shipping/insurance. In Atlanta, GA.

You may have just taken out the front end transistor. I am not sure if this unit has multiple bandpass filter sections or not. Also, you could have either/and taken out the 1st mixer. If you have a power meter of some sort, you can measure the LO injection level of the synthesizer to make sure that it is working. I am not sure how much power you put into the front end, so I am not sure about the extent of the damage.

In "grammar" school, (60's) we spent tons of time on grammatical trivia.
"Past-future perfect". "Split infinitives" "subjunctive" None of
which I can remember what they were. Also there were terms
for words what have the ending "ing" tacked on. "I am repairing the
antique radio". And "used to" is a kind of tense of verb IIRC.
Like: "I used to replace tubes before checking anything else".
And we made schematic diagrams of sentences. Say
"I repaired the radio" would look like:

```
I | repaired | radio
--------------------------
\ the
```

At the time I was trying to figure out if I could get a job
diagramming sentences when I was grown up, and who would
pay me to do that......

Though "Give Way" seems a bit less so than "Yield" (perhaps
it's appropriate to use a more polite term there). As for
"Way Out" as opposed to "Exit", maybe it helps avoid the
imperative and be more explantory. Or it's just fun.

Yes, the constitution (although Quebec has not signed it..hmmm...)
provides for protection of a "distinct society" by having, in effect,
positive discrimination in ways. Obviously it's not all that popular
amongst some.

A Lafayette portable AM/FM radio from 1969 had a set of instructions
that actually were quite understandable. " Tuning in an AM or FM
station, always tune the radio to point of maximum output and least
noise." This English only needs a bit of polishing to be good English.
Like "When tuning in an AM or FM station, always tune the radio
to a point of maximum clear sound and the least amount of noise."
...Well, better English.... :-)

Yes. When receiving a trunked system transmission, the scanner will
display the alpha tag for the trunked system frequency as the bank tag
and the ID alpha tag as the channel text tag. This is actually quite
useful in cases where there are trunked and conventional frequencies
in the same bank.

Yes. You'll need something that is capable of receiving digital
transmissions and comverting them to analog so you can listen to them.

It depends on which ystemthey're using. If it's APCO-25 you should be
able to get it with the new Uniden scanners that are coming out soon.

The BC250D and the BC785D due out in January.

It seems I have them all in.

And yesterday it stopped happening.
Maybe there were doing some work on it or
the freq rotating-schedule isn't daily or regular.

Anyway, thanks, I was worried I had a bad radio (and I just bought it).
After your post I relaxed a little and thought I'd just
see what happened for a few more day.
And it seems fine now.

Yes, I am aware of ALL of the other agencies, since I lived in the area for
2 years two years ago. Since I am no longer in the area, I am looking for
area broadcasts on the web, in particular the MPD. They used to have a site
through Yahoo, but it has not been active for over a year now.

Source record: 40186

Ala LaMancha, the jamming of cellphones is in some situations indeed a glorious quest. Unfortunately, it is also unlawful. And while you may well Fear the Feds, you won't know what hell is like until the CTIA goes after you.

Make a Last Will and Testament first.

On the other hand, there are a few little tricks that are often effective.

I am on a bus, going home after a particularly difficult day. Tired, grouchy, just wanting peace, quiet and a beer in that order. Naturally, there are several people yapping away, but none are within a few seats, nor are they particularly loud, so I just ignore them (while picturing in my mind, Xrays of them after having had their pernicious phones placed into their gender specific orfices.

And who at the next stop plops down beside me? A 'half-breed. Part Teeny-Bopper and the rest dislocated Valley Girl. Like she goes on and on.... until I decided to make it a three way conversation. I whip out my ICOM U-16 (no one knew it wasn't turned on) and start rapping, a few decibels higher audio signal strength.

yack yack...ohmigod my dad will kill me... yack yack yack... oh you're kidding.. yack yack yack...there's this new guy at work .. yack yack yack...oooh i saw this dress at macy's...

This went on for only three or four minutes before the phone was stashed in her purse. (Not - as you may have already surmised, where *I* would have put it)

I love how some times I can be as articulate as I am abnoxious. I got a few smiles from other comforted commuters and a grin from the Muni driver.

Another good one is the old Pacemaker Ploy.

It helps if you are - or at least reasonably resemble - an Old Fart, but this isn't absolutely necessary since disease has no disrespect for age.

Yup. Just clutch your chest and moan some. Emulate Charley Brown. "Auaggghhh".
...gasp... pacemaker.... cellphone... your phone... pacemaker... dying... ambulance... helllpppp...

Gets a lot of attention, causes the calluous caller to cringe and
slink away, and restores intelligent conversation.

If nothing else suffices...

This is borderline battery but is very effective.

I did this one at John Barleycorn's Pub in San Francisco.

A Yuppie looking type whips her phone out.
They never just take them out of their pockets, they have to be
ostentatious notwithstanding the fact that virtually everyone else has
one one those confounded communicators and no one is impressed.

Starts yacking.

Her table three feet from ours where we *were* having an enjoyable
conversation.

Polite hints do no good.
Slightly raised voices do no good.
Implications concerning the legitimacy of her ancestors and
suggections on how to cure her very aromatic yeast infection are like
water off a duck's back.

Well, what it comes down to is this:
1. With a little effort, those 'flip' phones can be flipped back
beyond their normal opened position. (They signal this by making a
loud plastic CRACK")
2. Cellphones cease to operate after they have gotten to the bottom of
things in a pint of Bass Ale.

You are correct Ed, A simple perusal of any loss table shows that as the Pf per foot decreases, the losses decrease as well. As long as Xc= 1/2(Pi)fc as freq increases Xc reduces sending more of your signal to ground.

For the scanner user, RG6 is the best cost /performance answer. The 75 ohm cable would introduce only a -0.18dB loss (4%) in a 50 ohm system and the losses in the cable are far less than many expensive 50 ohm cables.

Which is better?

I have VERY little scanning experience but would like to buy a good scanner for SE Florida area. I've gone through posts in this NG and it seems the scanner of choice is the PRO-2006 or BC780XLT ... with trunking in the area it seems the one to buy is BC780XLT. However, also noticed the BC785D is coming out soon! It has more memory but I did not see any improvements; are there any improvements? Is the 1100 memory (compared to 500) really necessary?

Lastly, I noticed Uniden has a handheld (BC250D) comparable to the 785D coming out as well. What advantage/disadvantage is there to having a handheld or basestation model?

Comments, thoughts, suggestions?
Vic

The answers to the questions asked here can all be found by reference to the transmission line equations.

The answers are quite complex. Suppose I have a coax cable with a solid plastic dielectric, a given diameter of the outer conductor, and a center conductor diameter chosen to give an impedance of 50 ohm.

Now, suppose I decide to replace the dielectric with one of lower dielectric constant, say by using foamed plastic. If I keep the same outer and inner conductor diameters, the impedance will increase to a value of greater than 50 ohm. Not desirable. So, let's suppose I choose to keep the same outer conductor diameter, use the foamed plastic dielectric, and maintain 50 ohm impedance, then I will have to increase the inner conductor diameter to maintain 50 ohm impedance.

But, the increased diameter center conductor will have a decreased DC resistance, and will have an increased perimeter, and thus will have a decreased skin effect resistance. The decreased resistances will result in lower loss.

A similar result would be found if one chose to keep the inner conductor the same as with the solid dielectric, and increase the outer conductor diameter.

The minimum loss might be found by changing both inner and outer conductor diameter so as to maintain 50 impedance. Of course, if the outer conductor diameter is changed, then one would have to design and implement a whole new set of coax connectors to fit the new outer diameter cable. Thus, one is likely to chose the solution which can be implemented using existing connector sizes.

An internet search search on "transmission line loss", or some similar combination, will turn up several informative sites.

Try section 30 of the BROADCASTING DISTRIBUTION REGULATIONS, pretty lengthy legalese specifying: "Programming Service Deletion and Substitution". It doesn't even have to be the same program, just comparable? Section 30.(2)(a)(i).

I would much prefer some requirment to improve the technical quality of the signal, instead of regulating the content I am allowed to see/hear.

Dave

Other than the ability to install a digital card and receive digital comms and the 1000 channel mmemory those are the only added features I know of for the 785. Actually the 1100 channel is a bit misleading, you only get 1000 channels, the extra 100 are for the searching feature storage.

But you asked about is 1000+ channels necessary. First, if you like to do monitoring of MilAir you'll fill them up FAST! Currently I monitor over 1600 freqs and than includes ZERO Public safty or trunked. Granted I don't do that all on one scanner but have that spread out over 9 scanners.

Another advantage of lots of memory is if you travel. You live in SE Florida, lets say you might live in Palm Beach and want to take a trip today to Miami, so you put Miami in bank 2 (channel 101-200). I"m assuming you have Palm Beach in bank 2 (1-100). Lets say every few weeks you drive to KeyWest, well you can put those in bank 3 (201-300). Lets say you also like to listen to Miami Airtrafic, where there's another bank..... As you can see you might not us all 1000 channels but you will fill up all 10 banks quickly.

That one's a simple present participle. But there are also gerunds,
i.e., verbs that act like nouns; "Repairing is fun."

> And "used to" is a kind of tense of verb IIRC.
> Like: "I used to replace tubes before checking anything else".

Hm... don't know that one, but it makes sense.

You too? I loved diagramming sentences. I'd look for the longest
hairiest sentences I could find (Hemingway comes to mind) and see if I
could diagram them.

I'm glad I didn't take it up as a career though. I think burnout rate is
pretty high amongst sentence diagrammers. ;-)

George,

Your reply was helpful!

It seems it would be better to wait for the 785D. My reasons are the
following:
* more memories
* no gaps (except cell) between 806 & 1300 MHz
this would allow -ALL- UHF TV audio, 900 MHZ ham etc.
* digital capable (though limited)

I'd still like to hear opinions of buying the base model as opposed to a
handheld. Would also be interested in hearing why AOR base scanners are
rarely mentioned in this group. Is AOR priced to high? Are they inferior
scanners?

Glad I could be of some help. About Base .vs. Handheld. Here everyone is going to have a different opinion and every opinion will be correct for that person.

Here are my feelings regarding that topic. Personally I would rather buy base scanners because 97% of my listening is done from home and done with multipul scanners (up to 13 at one time). Base scanners sit much better on a table then handhelds, handhelds tend to get knocked over when sitting on a table. This is especially true if you have multiplu scanners in the shack. If you take a look at my shack at http://www.MilAirComms.com/shack.html just imagin if all those scanners were heldhelds. All it would take is to bump the table and I'd have a dozen scanners on the floor, not a good idea.....

As far as being mobile the base versions of the 780 or new 785 still will allow you to scan while mobile. I've had 2 780's in my car at the same time without any problems. The 780's/785's are still small enought where they are easy to sit between your driver/passanger seat without a problem. Uniden does include a 12volt cord so you can quickly plug your scanner into the car.

The only time I find myself using a handheld is when I go to an airshow or the other few times per year I want to physically carry a scanner with me. Granted there are a lot of times I'll take a scanner mobile in the care but its rare that I still want the scanner with me when I leave

the car.

I will admit however that I'll probably pickup a 250 when it comes out. Simply because I feel its going to be one awesome MilAir handheld scanner.

While I would agree that increasing the conductor size will reduce IR losses, I would contend that this is not the primary reason for loss in coax. Take a given set of conductors, change the dielectric and measure the loss at the test frequency with the cable terminated in it's characteristic impedance. I contend that the losses will be higher as the Pf per foot increases. I further contend that these losses are greater than any caused by skin effect.

Your mileage may very.

As you don't get a lot of reports in the auto sections on Rolls Royce. The
AOR is expensive and is designed for commercial service.

Given the assumption that the dielectrics are lossless (a reasonable
assumption with today's dielectric materials and at the frequencies and
impedance levels we are concerned with), resistive loss is the only
other loss mechanism.

Other then resistive loss and dielectric loss, what other loss
mechanisms are there?

Non sequiter Walt, it is the dielectric constant of the material. As the capacitance increases, the capacitive reactance decreases. This is exacerbated as the frequency increases. We now have a low Xc shunting the signal to ground. Making the assumption that the dielectric is perfect, the same rules apply.

Ivor,

See my webpage <www.erols.com/jwilson9>. I wrote a two part article for Monitoring Times magazine in 1994 discussing INMARSAT satellite reception and how to configure a system to receive either one or two INMARSATS depending upon where you are in the world.
I also can supply INMARSAT reception components. You also can email me at <jwilson9@erols.com> if you wish.

Sorry Fred, but you have to have a loss mechanism, which you have not
yet provided.

If I shortcircuit a lossless transmission line, the signal is reflected
losslessly back to the input of the transmission line. The signal will
arrive back at the input at the same power level as it had originally.

The increased capacitance you refer to decreases the impedance of the
transmission line, but if there is no resistive or dielectric loss,
there is no loss in the line.

I'm programming the alpha labels on my 9000xlt (very time consuming, hope santa brings a 780)

Here's my problem: I'm having a hard time coming up with a clear labeling system in the case where multiple agencies share the same freq. For instance, the Outagamie county sheriff uses 155.7 for F1, and Grand Chute also uses that channel as their F1. This holds true for many freqs, but then there will be some different ones.

What is the common practice for labeling the multi-agency channels? I'm not coming up with anything I like and don't want to have to go back and relabel everything later.

Could be that's her honest belief.
I was once fluent in Latin, but believed I'd forgotten it long ago. A
few months ago I was reading a book in English when I came upon a Papal
Bull in Latin. My mind shifted gears automatically, read the page of
Latin, then several more pages of English before I realised it! Trouble
is, when I went back to the Bull I could no longer read it even tho I
remembered what it had said! Truly our subconscious minds are wonderful
things!!

So?

Until Mr. this.is.invalid grows up enough to show him or herself I'd keep doing it - with a disclaimer at the bottom inviting the people who don't like the post to either send me an email detailing WHY, or suck an egg rectally, with preference given to those who choose the egg! Those who send email would be told in no uncertain terms to grow up, use a killfile, and mind their own damn business. period.

Mr Pasternak (ooh I'm the *producer* of a free ezine - wwwwwowwwww) also gets a thumbs-down in my book by even responding to such trivial whining. If I were the admin, anyone who sent ME this email would get a standard one line reply: "SO WHAT - DEAL WITH IT."

But hey - that's just my opinion. I could be wrong.
-me

Hi,
I bought an AOR-AR5000 from Universal Radio, and it came in a box sealed by packing tape. Had it been opened before, it would have left a trace. Also, Universal does not sell returns as new (Just check their used listing to see.) However, my Icom R-8500 came in an unsealed box.

Hope this helps.

Has anyone noticed how much Radio Shack's scanner selection has dwindled? I remember only a couple of years ago they carried a wide selection of both base and handheld scanners. This year, the PRO-2053 was discontinued only after a year of production, the PRO-2067 is also no longer on their website, leaving only the PRO-2052 as the top-line base scanner, plus the PRO-2018? 200 channel, which is the entry level choice.
The build quality of their scanners appears to have cheapened as well. I own two PRO-2053's, and while they are great performers, they are light plastic boxes that skid easily on the desktop when I press buttons. In contrast, the BC-780XLT and 895XLT I own feel solid. I wish RS would go back to building scanners with the same quality feel as the PRO-2006, one of which I've owned for over 12 years.
Is Radio Shack giving up slowly on scanners, or are some new products in the works? Will they have a line of digital scanners?

Craig

I had one of those Fm transmitters called "Sound Feeder"
it runs off the cigarette lighter, has a stereo 1/8" jack (may need a stereo
to mono for some scanners)
Overall it does good --hate the tuning dial)
It puts sound through my speakers when aircraft come thru the scanner.
I was riding through walmart with the front windows down and had to stop and
an airliner came through the speakers that it was climbing such feet for FL
1-5 thousand.
Some people were looking at me like ---"what the hell was that?"
I used to listen to Chesterfield County until they went to digital.

come to canada. they are all discontinued except for the 245. I went thru 3 provinces when I was travellingand was curious if any had any radios. I found no scanners or ham gear at all. eventhose scanner discones are discontinued here. Their catalog has I think 1 scanner in it. that is all. :(Oh well. I prefer models that were made for here anyways.

Mark <marks@nospam.org> posted on that vast internet thingie:

>They claim 8 miles wiht the sn920. What do you find to be realistic? If I
>could get 5-6 miles reliably, I would be happy.

Technically speaking we sort of regard that claim as, well, shall we
say, a lie. In all fairness I'm sure they would like for it to be
true and to be honest so would I. So we certainly wish it was true.

The most I have personally experienced is about a half mile but that
was in an urban hilly area. I have talked to a Canadian who claimed
to get 2 or 3 miles. I believe some of our customers are managing
to get a mile in some circumstances.

All that said, it is still by far the longest range phone I am aware
of that you can legally use in the USA. It is, by far, the best on
the market, but it doesn't sound like it would even come close to
meeting your need.

I believe that is incorrect. I've read somewhere that in the very early
days of the US, the government voted on whether English or German would be
the official language.

You will loose 4% of your signal at worst, this do to the mismatch in a 50 ohm system.

Hit that send button a little quick..... ;-)

AOR typically makes full coverage DC - Daylight radios
with unmatched preformance.

I've had lot's of radios PRO-2006, PRO43, PRO92, PRO93,
PRO2022, BC780XLT , ICOM-R8500, R75, RX320 and various others.

The only radio I haven't sold over the years is my AOR AR5000+3.

It's just that good........

The short answer is "nothing" you'll be much better off than using
RG 58 or even RG 8,, especially above 400mz. The difference between
75 ohms and 50 ohms in the real world of recieveing is almost non-
existant. I use RG 6 for all my scanners. Try to get the double shielded
variety. The difference in loss above 400mhz is a matter of several db's
between the RG 58 and RG 6. A 3db loss is loosing 1/2 of the signal.

It is the credit card companies that require the billing and shipping
address to be the same. If there is an issue about delivery, the
dealer will not have a chance of refuting the claim. chareghs

It makes perfect sense to me that a company would ask to verify my billing address before shipping products. There are so many places that we give our card number that there is no secret to that. The billing address is just one small step to prevent card abuse. Why is it that so many people are put off by this?

Urban legend. There was some minor discussion due to the German colony in
Pennsylvania at the time,b ut there was never a vote.

I believe Prof. Long can detail this better than I can, however.

Here is some additional information:

"Subject: Return of the US Language UL
Date: 12 Jul 92 16:43:24 GMT

Those of you who have been around here for longer than you care to admit
(like me) may remember the time someone brought up a legend about German
having narrowly missed becoming the official language of the United States.
This is a common story, and the usual cap to it is that Congress voted - by
a majority of one vote - to make English the official language of the US,
this significantly altering the course of development in the US textbook
publishing industry.

The story is false. Matter of fact, the US at present does not have an
"official" language in the sense of a language declared by law to have
special status; English is merely the de facto standard. There _was_ indeed
some discussion about which language to adapt, with some strong separatists
arguing that English was the language of the "enemy". However, there were no
cliff-hangers as suggested by the legend mentioned above; the strong
separatists were a minority group, and it was pretty clear from the start
that most people considered changing from English to be too much trouble.
All this junk was discussed the last time around, but I wanted to summarize
it for those who weren't with us then.

The reason for bringing this up is that I have found an incident that may be
the source of this UL. (Drum roll.) My source is the _Cambridge Encyclopedia
of Language_, by David Crystal, published by the Cambridge University Press,

(c)1987. In the interest of completeness, ISBN 0 521 26438 3.

from page 365:

A planning myth

Probably the best-known myth in the history of language planning is the story that German nearly became the national language of the US in the 18th century, losing to English by only one vote in the legislature (the "Muhlenberg" legend). In fact, all that was involved was a request, made by a group of Virginia Germans, to have certain laws issued in German _as well as_ in Englih. The proposal was rejected by one vote, apparently cast by a German-speaking Lutheran clergyman, Frederick Muhlenberg (1750-1801). But the general status of English as the majority language was never in doubt. (After S.B. Heath and F. Mandabach, 1983.)

[End quote]

Just to show that i did my homework, the paper referred to is: Heath, S.B., and Mandabach, F. 1983. Language status decisions and the law in the United States. In J. Cobarrubias and J.A. Fishman (eds.), _Progress in language planning: international perspectives_ (Berlin: Mouton), 87-105.

It is so ingrained in American folklore, I never gave it much thought
that it wasn't true. It seems nearly everyone knows the story (as far
as missing by one vote in Congress) and believes that we might have
become a German speaking nation. I have even heard of studies trying
to predict what might have become if our common language were German.

Ah well, as Paul Harvey says, Now you know the rest of the story.

Joe

In Canada RS has discontinued selling scanners because the new digital encryption technology has made them useless. So if you can find them in your stores then consider yourself lucky.
One other point RS does not build the scanners Uniden does for RS so comparing one to the other is like comparing a Chevy Metro to a Pontiac Firefly. The only difference is the price and the name tag.

Off-topic, but I agree. Another one that's bugged me for years is credit cards in gas-station pay-at-pumps. You just slide a card in and get your gas... no signature, no license number, no nothing, as long as the card is "good." I carry several gas cards, (plus M/Card or Visa), and use whichever is handy, so I could get a card stolen and not really miss it for days or even weeks. Meanwhile someone could be tanking up all their friends cars at my expense.

Only in a few places am I STARTING to find a little verification... some stations' machines now require you to key in the billing-address zip code. A small, but probably effective, step forward.

I worked for a "mail order" radio/electronics outfit, and we eventually had to start verifying the billing address for shipping. One favorite trick was for these bozos to find a vacant apartment in an apt bldg, and have it UPS'd there. UPS will generally leave a parcel at the door unless otherwise instructed. The crook would figure out the approx delivery date (or even call us for the tracking number), then watch for the package to show up, and walk by and scoop it up, usually entirely unnoticed. So we went to shipping ONLY to billing address. And I believe UPS has tightened up their policies too.

Hello everyone,

I am fairly new to the scanning community and just got my first scanner yesterday. It's a Uniden Bearcat BC80XLT. Anyways, I was wondering if anyone out there could help me find the frequencys for the St. Charles, MO County/City area (It's close to St. Louis). I programmed my scanner with the ones in the little booklet, but I only seem to be getting very faint signals. Thank you very much.

People who violate net custom, including the "on-topic" rules for
newsgroups, as listed in the charter and FAQ for the group, will have
their ISP complained to. ISPs who support such actions often find other
sites unwilling to handle their traffic, mail, web or news articles, or
provide traffic to them.

So the attitude reverses.

"channel?" it's called a "Usenet Newsgroup" get with it.

>wanted trunk tracker scanner that is open or unblocked

The only two "Trunking Units" available outside N America are:

UBC-245XLT (http://www.javiation.co.uk/ubc-245xlt.html)
UBC-780XLT (http://www.javiation.co.uk/ubc-780xlt.html)

The handheld UBC-245XLT is only distributed by Uniden in Australia.

6402. Ontario Unlisted Frequency Guide

Newsgroup: rec.radio.scanner
Date: 2002-12-18 13:43:58 UTC
From: John Medica - System administrator <AntiSpam-NoReply@WeAreAgainstSpam.com>
Message-ID: <3E007B9E.8050209@WeAreAgainstSpam.com>
Source record: 40141
Cross-posted to: alt.radio.scanner,alt.radio.scanner,rec.radio.scanner

Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbyists who are
frequency hunters. You will find lists of Ontario radio frequencies that are
not listed on any web page, published in any scanner book (Haruteq or Scantrix)
or listed in the government frequency list (Industry Canada's TAFL). This list
is all based on research and the patience of the people who contribute to this web page.

6403. Re: Future of Radio Shack scanners?

Newsgroup: rec.radio.scanner
Date: 2002-12-18 13:52:08 UTC
From: Roland <va3xaAAA@rac.ca>
Message-ID: <Xns92E85A3574258Menevertellca@206.172.150.13>
Source record: 40142

Not only have they stopped carry scanners and antennas but they have
stopped carrying antenna mounts. I commented to the owner of 1 store
why be called "radio" shack if you don't carry radio's or radio
accessories. Looks like you want to be called cellular shack or
computer shack. I naturally got a dazed and confused look in return.

What a crock. No one in their right mind is going to tell AT&T Worldnet or AOL "No, we don't want your traffic because you didn't stop so-and-so from doing this-or-that..." That's just absurd. Over an allegedly off topic usenet message no less....

Besides, the person in question is no more of an ISP than you are or I am. He just runs a website. Whoopity Do Dah.

I'd still tell such whiners where to stuff it. What people do online is their business - so called net-cops should go walk a long beat off a short pier.

Well then. You have an opportunity you may not have realized you have -
obviously the replies to this thread shows there might be a market for this
idea as well...

Since you have the skills, and need the money, why not rewrite the manuals
in plain english and SELL them yourself?

I'd pay a few bucks extra for a manual that made sense! I'm actually one of
the few people who has learned the value of taking the time to read one
before playing with something new.

It's a thought... if you don't do it, someone else will I'm sure.

Because the time and effort it takes to do a proper rewrite would never be recouped by the sales.

The Radio Shack outlets here in Calgary never cease to amaze me. I
have tried to explain to them over and over again that just because
Calgary Police Service went digital years back, there is many other
emergency services that can heard in Calgary and area, that are still
analog. This includes the Calgary fire dept. and EMS, as well as a
number of other fire and ambulance services, in the province of
Alberta, that are analog, and can be monitored in Calgary. As well,
the RCMP, in Alberta, are still, for the most part, in the clear, and
not digital. I have tried to explain that many other things can be
listened to on a scanner such as trains, planes, the forestry and
wildlife services. But they seem to have got it in their heads that
scanners are only used for listening to the cops. The one and only
scanner in Radio Shack's catalog, has to be special ordered!

Can some one tell me if I have a problem with scanner - software or not setting up correctly. I have Scanner Data-Loading software 20-048 The first thing Inotice is that there is no Pro-95 in the Config there is Pro 76,79, 89 2016, 2017 scanners. Next I have cable in Ser 1 I then connect the cabe to scanner and turn on, I then see thatI am in Clone Mode and to push up key to send, from there it goes to Confimr send 1=yes I press key and get CLON MODE sending data, it looks like it is sending but nothing is showing up on the computer of to the scanner. Thanx in Advance

I don't believe the software you have is going to work with the Pro-95. For what it's worth, salesman at my local RS says it's not available yet. *But*.....there is software and cable available. Software: www.starrsoft.com (called Win95, free) & cable: www.pro95.com ($23.00 US). HTH

Possibly slightly higher losses, but nothing to get very excited
about. The reality is antennae are rarely exactly 50 or 52 ohms, or
even 70 ohms. They are low Z and High Z. The difference in losses
between a 50 ohm and a 75 ohm high quality coax connected to the
antenna will be small until the cable run is very long, in which cases
the cable losses will dwarf the differences anyway.

Yeah, truth is I enjoy the chinese ones more too. Possibly not
as good as manuals, but far more satisfying.

Here's a snippet I saved a few years ago from the packaging for
"House Wife's Style" Safe Knife Grinder, No. 8288. Made in China.

THE PRODUCT GETS MULTIFUNCTION TOGETHERIN ITSELF. THE
VOLUMEIS SMALL. IT IS SAFE TOGRIND KNIFE.BE SURE TO
WORK WELL. IT CAN MAKE THEM SHARP AND SMOOTH IN
CUTTING TOOL. POTTERY. PORCELAIN. PLASTIC AND
WOODENTOOL. ETC. FAMILY ARTICLES FOR DAILY USE.BE
SERVICE FOR CONVENIENCE OF YOUR DAILY LIFE.

Neither the cable nor the software in the RS package you have (20-048)
will work with the PRO-95. Follow the links in the previous post for
compatible cable and software.

Hey thanks for that info, thought the scanner was messed up a little.
I d/loaded Win95 so all I need now is the cable. Thanks once again.

Don't forget railfans and racing fans, too. Both are HUGE markets for
radio scanners and both are still 100% analog in their voice communications.

Also, IIRC, aviation/ATC is still 100% analog (and 'AM', too).

Time to check out the 'big boxes'. (sigh....)

What would be the ideal scanner for an area that uses trunking radio systems? And that can pick up digital as well as analog cell phone signals? Anyone know how much the BC780XLT and BC785D cost in Canada? Who can I buy these scanners from?

Thanks in adavance, merry christmas,

DL

Wrong! Uniden has, it is true, produced SOME scanners for RS, but the
current Pro92/3/5 units (and their desktop/mobile counterparts) are designed and
produced by GRE. Some additional research seems to have been warranted here.

lots are still analog here. That is the fun about living in a valley. pain in the bumm to use digital. Unless you want many repeaters just to keep up with the hilly terain. Yes our police have digital. but that is only for secret stuff. lol. everything else here is analog. except the BC ambulance here transmits alot of their calls on dataheads using MDC-1200 . Ya RCMP use CDPD here. but still lots go over the radio. fire is 100% analog here too.

a sample of the english language ...

So, YOU THOUGHT YOU WERE TOUGH ENOUGH TO TRY TO LEARN ENGLISH?

This little treatise on the lovely language we share is only for the
brave. It was passed on by a linguist, original author unknown.

Peruse at your leisure, English lovers.
Reasons why the English language is so hard to learn:

1) The bandage was wound around the wound.

2) The farm was used to produce produce.

3) The dump was so full that it had to refuse more refuse.

4) We must polish the Polish furniture.

5) He could lead if he would get the lead out.

6) The soldier decided to desert his dessert in the desert.

7) Since there is no time like the present, he thought it was time to
present the present.

8) A bass was painted on the head of the bass drum.

9) When shot at, the dove dove into the bushes.

10) I did not object to the object.

11) The insurance was invalid for the invalid.

12) There was a row among the oarsmen about how to row.

13) They were too close to the door to close it.

14) The buck does funny things when the does are present.

15) A seamstress and a sewer fell down into a sewer line.

16) To help with planting, the farmer taught his sow to sow.

17) The wind was too strong to wind the sail.

18) After a number of injections my jaw got number.

19) Upon seeing the tear in the painting I shed a tear.

20) I had to subject the subject to a series of tests.

21) How can I intimate this to my most intimate friend?

Let's face it - English is a crazy language.
There is no egg in eggplant, nor ham in hamburger; neither apple nor pine in pineapple. English muffins weren't invented in England or French fries in France.

Sweetmeats are candies while sweetbreads, which aren't sweet, are meat.

We take English for granted. But if we explore its paradoxes, we find that quicksand can work slowly, boxing rings are square and a guinea pig is neither from Guinea nor is it a pig.

And why is it that writers write but fingers don't fing, grocers don't groce and hammers don't ham?

If the plural of tooth is teeth, why isn't the plural of booth beeth?

One goose, 2 geese. So one moose, 2 meese? One index, 2 indices?

Doesn't it seem crazy that you can make amends but not one amend.

If you have a bunch of odds and ends and get rid of all but one of them, what do you call it?

If teachers taught, why didn't preachers praught?

If a vegetarian eats vegetables, what does a humanitarian eat?

Sometimes I think all the English speakers should be committed to an asylum for the verbally insane.

In what language do people recite at a play and play at a recital?

Ship by truck and send cargo by ship?

Have noses that run and feet that smell?

How can a slim chance and a fat chance be the same, while a wise man and a
wise guy are opposites?

You have to marvel at the unique lunacy of a language in which your house can burn up as it burns down, in which you fill in a form by filling it out and in which, an alarm goes off by going on.

English was invented by people, not computers, and it reflects the creativity of the human race.

anyone know of a readily available scanner I can find that will receive 1090mhz? I would really like a pro2004, but I think that will be hard to find... I live in atlanta

6434. NIL-JON Super-M Mobile Antenna performance in 118-135 and 225-400 bands

Newsgroup: rec.radio.scanner
Date: 2002-12-19 03:22:36 UTC
From: Joseph Pitman <jwp137@comcast.net>
Message-ID: <fQmdnSeHmcbNppyjXTWcqw@comcast.com>
Source record: 40073

How does the NIL-JON Super-M mobile antenna perform in AIR and MILAIR bands? I know it is not designed for these bands. Are there other more suitable mobile antennas with better performance in these bands?

Why does there seem to be such a lack of specifications and performance data available from antenna manufacturers? Response curves are hard to come by.

And due to the vast number of private/general aviation aircraft this will not change in the next 20+ years. If you don't believe that then look at the fact aviation never switch to FM, been AM for 50+ years.

Plus don't forget the MilAir guys. 13 Scanners in the shack (most with the ability to trunk) and only one programmed with one bank of trunked freqs....

I bought a NIL-JON super-M a few weeks ago. With this antenna I can pickup our local ATIS from Daytona Beach International Airport from about 20+ miles away. I can even hear planes picking up clearences, talking to ground, or talking to the tower while the plane is still on the ground. These comms I can pickup with thie NIL-JON antenna from about 4+ miles away without any problems, not bad consider the aircraft antenna would be only about 5' off the ground at that point.

As far as MilAir goes its doing great there as well. Can pickup aircraft working MOA's and Warning area well over 80 mile away. Also does great in the 138-144 MHz Mil range as to be expected as the antenna is tuned for 144-148 MHz 2 Meter Ham band (as well as 220-225 & 440 bands).

I will say that as far as 800 MHz goes it doesn't do any better than the stock "rubber ducky" which came with the scanner. But since its rare I listen to police/fire its not a big deal for me.

Interesting. Somehow, I suspect though that cable companies
petitioned for the adoption of this regulation to the CRTC.

I recall from something I read a number of years ago that ATC remains
'AM' as a *life-safety* measure. AM signals do not abruptly cut out
when stonger signals happen to come along as they do in FM. Also, AM is
not limited to 'line of sight', a 'life-safety' thing in mountanous places.

Since Japanese is difficult to learn to read, most people overestimate the
importance of reading in the process of translating Japanese to English.
Reading skill sufficient to puzzle out the meaning with a dictionary on
your lap suffices. While this isn't exactly easy to learn, it's far short
of fluency.

English is taught in Japanese schools and is also widely used in
advertising in Japan. English language instruction in Japanese grade
schools is not high in quality, but Japanese students still achieve a
higher level of capability in English than Americans commonly achieve in
their own foreign language studies. The Japanese are well aware of this.

I think these facts have a tendency to cause some Japanese to overestimate
their prowess at translation. If you're a Japanese engineer with the best
English skills in your department, the boss may mistakenly think he can
save money by having you translate things. It is very un-Japanese to
consciously do shoddy work, but without critical feedback how would you
know? Feedback from the USA doesn't count: many Japanese think Americans
are self-centered crybabies (with some justification).

Literal translation is problematic anyway: Japanese has a wildly different
grammar from English. Japanese verb tenses don't map well to English
tenses. Adjectives have tenses. A verb relates three nouns to each other,
not two. Word order is completely different. The result is that a Japanese
writer will build up to a concept from a very different path than an
English writer will.

Engineering and science are especially difficult, as the languages often
use different metaphors. A Japanese translator might know to use the
English word for a collection of cannon in place of "denchi" (literally
"lightning pond"): after all, "batteri" is also a modern Japanese word. On
the other hand, I never got a satisfactory translation of "yomikomi" until
I figured it out myself: my Kodansha dictionary translates "yomi" as
"judgment" and "komi" as "included". I had to look hard at context and go
back to the roots "yo(mu)" (read) and "ko(mu)" (load) to get "operand
fetch"! You have to *really* understand the subject matter to do a decent
job of translation.

Hi group,
I have a winradio external unit 1550-e and for the life of me I cant get the hf fax decoding software to run straight, I cant see anything in the help file for correcting slant, I have changed some settings in the parameters box, to no avail, I know the program says you should calibrate in meteosat etc, but you gotta be able to hear them, I have megawatts of pagers 300 meters away, meteosat is a joke, I have saved a wave file of a decoded signal and still its at 60 degrees,

I'm getting a ric in me neck :-)))

Is there anyone that has decoded a picture straight, if so how,
I appreciate any thoughts or advice...

I have excellent success with jvfax (in Dos) but you cant watch the cpu temps in dos can you, unless you run in a window... yuckie...

6443. tk92 v0.7 open source, multiplatform software for PRO-92, PRO-2067 available

Newsgroup: rec.radio.scanner
Date: 2002-12-19 12:18:41 UTC
From: "Bob Parnass, AJ9S" <usenet2@parnass.org>
Message-ID: <3e01b8b2$0$1456$1dc6e903@news.corecomm.net>
Source record: 40081
Cross-posted to: rec.radio.scanner,alt.radio.scanner

tk92 v0.7 is now available for free download. tk92 is open
source, multi-platform software for configuring Radio Shack PRO-92
and PRO-2067 scanner radios.

I wrote tk92 chiefly for radio hobbyists who use Linux, MacOS X,
BSD, Solaris, Unix, or other non-Windows operating systems.
tk92 works on Windows-based systems (95 and later), too.

tk92 v0.7 now works with these, and perhaps other cloning cables:

- original GRE 30-2290 cable,
- "Purple" cloning cable (US Patent 5,504,864),
- RT Systems CT-29A cable with a 3-to-2 pin adapter,
- Bill Petrowsky's Simplified Op Amp cable

This version may run more slowly than earlier versions
or not at all on computers without sufficient RAM.
It requires tcl/tk version 8.4 or later.

Thanks to Ken Plotkin and Bill Petrowsky who determined and
published the PRO-92 and PRO-2067 memory image layout, with
corrections from Don Starr. Bill suggested implementing
preprogrammed fleet maps in Win92 and I incorporated them
into tk92, as well. Steve Falco published the source
code for his 92linux command line based software, written
in the C language.

Thanks also to Greg Shepherd, Ryan Schave, Frank Monroe,
Bill Petrowsky, and others for helping to test tk92.

tk92 is undergoing active development. You can learn about and
freely download the latest beta test version of tk92 from:

http://parnass.com

I don't warrant the software, though it will cost you nothing.

It has to be a "high tech" language? It's not enough to be able to
communicate with your neighbors or understand what you hear on the radio?
I certainly would find Spanish useful sometimes, but I don't know it.

I have found French quite useful professionally. I think most US schools
still teach that. My town's public school system certainly does.

6449. Speech Inversion desrambling

Newsgroup: rec.radio.scanner
Date: 2002-12-19 14:30:25 UTC
From: ctpds49@aol.com
Message-ID: <20021219093025.18081.00000327@mb-fc.aol.com>
Source record: 40086

Speech Inversion(Donald Duck sounding speech) is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

Speech Frequency Inversion scrambling is descrambled with a demodulator IC. If the filtering is lite, it will decode some variable split band as well.

Source record: 40089

The "line of sight" property of certain radio transmissions is a characteristic of the frequencies used, not the type of modulation used. For example lo-VHF band FM signals (30-50 MHz) are often heard propagating over thousands of miles. Earlier this year, California Highway Patrol transmissions in the 42 MHz range were routinely heard on the east coast.

We are accustomed to thinking of "AM Radio" signals in the 1 MHz range as traveling long distances, and "FM Radio" signals in the 100 MHz range as being short range, line of sight.

I was never successful decoding satellites since I lack proper antenna.
The only one I could hear the best was NOAA14 or 12.
Have you tried decoding HF fax from Halifax NS? The signal is pretty good.

>in meteosat etc,

Hi Gus,

I'm a relative novice to decoding APT myself, but I know you can't use
Meteosat for calibration.

I calibrate to one of the NOAA birds, NOAA 17 being by far the
strongest and sexiest. Calibrations which work on all the NOAA and
GEOS birds don't work on Meteosat. I've deleted that series of birds
from the list of what my software will bother to decode. In a year,
the best Meteosat image I've seen has been miserable, where US birds
and 90% of the time as good as you see on TV.

I don't know what doftware you're running. HF is not satellite. 137.xx
megacycles is the APT (Automatic Picture Transmission) satellites.
Unless Meteorsat has an HF output, which I do not know, you may be
going at things from the wrong angle.

I use WXTOIMG freeware version as my receiving and decoding software.
It's excellent, and the author generously supports the freeware
version. In that, to calibrate, you have to turn OFF PLL something,
then drag your mouse diagonally down one edge of a slanted image, then
re-enable PLL correction. I only do that once, and the thing locks
onto all U.S. birds with perfect images, but the Russian ones still
are all slippy and distorted. It's not my receive station.

The Radio Imaging Group aka RIG http://www.rig.org.uk/ has been very
helpful to me in getting going. They have a mailing list on
yahoogroups, RIG-L, which I read every day and generally pick up
something useful

I've been a ham since 1970, and satellite weather fax images are the
most interesting thing I've done in hamming in a long long time.
Simple crystal controlled FM receivers, simple antennas, signals from
most birds pounding in. I've got less than $300 in my entire station.

WXTOIMG is here:

http://www.weather.net.nz/wxtoimg/

Worth downloading the software if you do nothing else other than read the help files.

Don't know anything about HF Wefax, but the principles should be similar. All my work is at VHF. I've got an HF receiver right in the room with the APT gear, but never felt any reason to connect it.

Watch out for 9913. It has an air dielectric. The loss is very low when it's new, but when out in the weather, the outer jacket "breathes" (not a hermetic seal) with temperature changes. Moisture vapor will eventually infiltrate, and the losses will increase.

The LMR400 can be obtained via mail order from several sources. Try a Google search.

Walt is right. Capacitance can not dissipate power. If you were to put a purely capacitive load on a transmitter (with exactly 50 ohms of capacitive reactance at the frequency of operation) no power would be absorbed.

My best friend, Mike, N0JVT, passed away on sunday. He
was 41. His birthday was Tuesday.

I have been given the task of liquidating his ham radio assets.

I have for sale one Uniden BC780XLT scanner, complete in it's
original box with manual, mobile mount, ac adapter, etc. It's all
there.

First $225.00 (that's not a typo) gets it.

I take money orders but prefer paypal. My paypal address is

kg0wx@yahoo.com

73's de Ken KG0WX

Uniden BC200XLT handheld scanner. Clean, rarely used. Works great, just don't have much need for it these days. With leather case, charger/power supply, antenna, manual, all in original box. Batteries are dead, but I'll replace them. $ 135 + 1/2 shipping/insurance. In Atlanta, GA.

new email = m9876c@yahoo.com

|> the best on the market, but it doesn't sound like it would even
|> come close to meeting your need.
|
| Is that using the phone out of the box - or with an external
| base antenna ?

Out of the box it is better than any other out of the box phone.
I got an 1/8 to 1/4 mile out of it maximum with the base indoors
on an outside wall. There were some shielded pockets where the
coverage failed, but no other cordless could do better.

Add the antenna and you can put the signal higher up (to add
range) and outdoors (to reduce building shielding). I now can
use mine with zero static anywhere within a half mile if I can
see the antenna on the roof or a 1/4 mile no static if the
antenna is behind a tree. The roof puts my antenna about 40'
off the ground. Higher points may give better coverage.

Since I really only needed 1/8 mile clear with penetration of
some thick walls (cinderblock filled with concrete) it does
fine. Standard 900MHz cordless phones in that environment
seem to give a 30 or 40 ft range (it is a bad environment!).
I tried a 2.4GHz phone and got 50ft indoors and 250ft outdoors
on the side of the building where the base was located.

So based on going 30-40ft to 400-500ft with no antenna or
1200ft no static with external antenna in the same environment
I'd say that the EnGenius is the longest range phone. Period.
As far as meeting your need of 5-6 miles - you would have to
put the antenna pretty high and have very flat terrain.

JL

While you statement is correct pertaining to the capacitor, the signal is shunted to ground through the capacitor. It is rereflected back through the capacitor at a phase angle approaching 180 degrees. This causes destructive interference reducing the available signal.

If losses can ony be IR or dielectric then how do you reconcile mismatch losses.

I think we are talking past each other. His statements pertain only to the loss mechanisms of a piece of coax and my statements apply to the system.

If it is solely IR, how do you explain the low loss of RG6 at 500 MHz Vs RG8 or 11? The wire diameters are much larger in the 8 and the 11. I would agree that for a given piece of coax that increasing the frequency will increase IR losses. That answer is based on a fixed set of conditions.

"Mismatch Loss" is not a "Loss" in the true sense of the word.

"Loss" results in power being being dissipated and converted into heat.

In the case of "Mismatch Loss" power is diverted away from the desired
load (typically the antenna or receiver) and is redirected somewhere
else. The power diverted from a "mismatch" is typically traveling on
the transmission line 'away' from the load, and can be recovered and
used, for example by the use of a "hybrid" circuit.

Ontario Unlisted Frequency Guide is dedicated to scanner radio
hobbyists who are
frequency hunters. You will find lists of Ontario radio frequencies
that are
not listed on any web page, published in any scanner book (Haruteq or
Scantrix)
or listed in the government frequency list (Industry Canada's TAFL).
This list
is all based on research and the patience of the people who contribute
to this web page.

With respect to the loss of RG-6 vs. RG-8 or RG-11, contrary to what you say, RG-6 is lossier than RG-8 and RG-11.

I am looking at the "Table of Transmission Line Characteristics" in the ARRL Antenna Book (19th Ed., page 24-19):

Type Matched Loss , dB/100'
100 MHz 1000 MHz
RG-6 2.7 9.8
RG-8 1.3 - 1.9 4.1 - 7.4
RG-11 1.5 - 2.0 5.4 - 7.1
RG-58 3.2 - 5.4 10.5 - 22.8

Okay, which language do you learn when you already know English?
There is no obvious choice unlike in Japan or China or Europe or
elsewhere (English). They tried to teach me Spanish in high school.
Waste of time; Spanish is not a high tech language. They didn't
offer Japanese or Chinese, which might have been more useful.

6474. Need a few beta testers for RS Pro79/Pro82 Upload software

Ask a stupid question.....

How about OUTG/G.CHUTE F-1? (I think the 9000 takes 16 chars... if not then that 780 that santa might bring will take such a tag...

I use the 780 myself and although these two share the channel I'm sure some sort of PL is in use. In such instances I simply have 2 channels with the same freq but the different PL's and label them accordingly. That way I can see at a glance which agency is talking. Our highway patrol uses the same channels but different PL's for different areas over VERY strong repeaters. This is cool because I can program each area seperately and then I can see which one just reported the 20 car pileup....

Either way actually. The ranges I refer to above are *with* the
external antenna. Even without the antenna it will out perform any
other cordless that I am aware of.

I am a believer in the external antenna "whether you need it or not"
since a good antenna system makes it so the handset doesn't have to
work as hard which translates to better battery life and less RF.

What if that cell phone conversation is a public safety official being infomed that they need to immediately respond to a situation? Do your annoyed friend really want to be responsible for obstructing that call?

Rudeness goes both ways.

An expensive restaurant is one thing, but I've had some idiot sitting nearby pipe in with, "Well, answer the damn thing", when my cell phone started to ring at the food court at the mall.

If someone with an illegal jamming device deliberately causes my call to drop, or prevents me from receiving a call, I'd say that's the most rude behavior discussed in this thread yet.

Not all cell phone conversations are trivial.

My employer has threatened to withhold $140 in on call pay if they are unable to get ahold of us. Furthermore, as a member of a family, there are times when I need to stay reachable when some crisis is brewing.

I hate opressive radio laws like the ECPA, but if someone is going to cost me money, or delay a public official from being alerted about an emergency, then laws to stop them are appropriate. Then they can enjoy an environment where the only cell phone around is the payphone in their cell.

Just have to ask. I take it you refuse to enter premises where
cellphones are forbidden, or disabled by shielding?

My high school French comes in handy in Quebec. Was able to haggle a
little blue 5-tube Westinghouse from US$10 down to US$7 at a Village de
Valeurs thrift stores two summers ago. :-)

THAT was an experience!! :)

Well, "manners" came into being because "back in the day" if you
weren't well mannered (or at least attempting to be polite), you were
likely to wind up either...
A) dueling on the field of honor, or
B) dead where you stood with a few feet of steel run through you.
Mind you I'm not advocating a return to those days, but
sometimes...sometimes <sigh>.

The only negative I can think of is trying to find a proper connector for
that size cable. You can look for F adapters to the type connector you
need, or even make your own. Other than that, RG6 is a great choice,
given is availability, low cost, and low loss.

As long as I'm not expecting any important calls, I have no problem
turning my cell phone off.

But if I do need to be reachable, I sure don't want some thin skinned
bozo activating an illegal jamming device.

Regardless who does the translating, it just seems stupid
that the manufacturer doesn't test the manual out on a
sample of people from the target audience. Why is it so
hard for many firms to understand this? It's probably also
not a good idea to have engineers write the (users) manual
either (I know, this last remark is flame bait).

What about this loss of $140 pay??? That sounds bad to me as cell phones are not always available in all areas. What happens if you are stuck in a traffic jam under a bridge where the signal is bad??? Do you loose the money? How about when you come to my work and go into my boiler room and your phone does not work? Another $140 gone I suppose.

Don't get me wrong, I'm against cell phone jammers also. If people would just use what's called common sense then we would not have any problems. I DO put my pager on vibrate before entering a movie theatre or restaurant and I DO put my cell phone on vibrate or silent when entering the same as above.

I just did not like the way you put it!!

> hard for many firms to understand this?

Because it costs time and money. When I worked full-time at The Evil Empire, we user-tested the QuickBasic 4.0 docs. It was a botch, because we had a bad sample group ("professional" software testers interested mostly in getting free samples), and no one wanted to commit the project to the extended testing that would have been needed to really learn something.

I might add that a good, experienced technical writer can "get it right" (most of the time) without testing the docs on a live audience. Honest.

> It's probably also not a good idea to have engineers write
> the (user's) manual either (I know, this last remark is flame bait).

Most "professional" technical writers are incompetent; I'm sure there are engineers who could do a better job.

The problem with having the engineers write the documents is that they are "too close" to the product and don't (usually) know how to look at it from the users' point of view.

>your phone does not work? Another $140 gone I suppose.

The policy is that if I don't answer, the National Operations Center
will leave a voice mail or text message, and I'm expected to call them
back within 15 minutes.

So far they have not acted on it, but there have been times they
couldn't get ahold of the guy on call, and the threat has been made.

>Don't get me wrong, I'm against cell phone jammers also. If people would
>just use what's called common sense then we would not have any problems. I
>DO put my pager on vibrate before entering a movie theatre or restaurant and
>I DO put my cell phone on vibrate or silent when entering the same as above.

I don't have vibrate on the phone I'm currently using. If it's my
turn to be on call, and I'm at a function such as a public meeting,
I'll press the "End" key to silence the ringer, then go out in the
hall and answer it.

Still that's probably not good enough for those in the
too-easily-offended crowd, who would annoyed simply because they had
to hear my phone ring one ot two times while trying to listen to the
speaker.

Philadelphia Pennsylvania Philadelphia PA

There is a form at the bottom for posting comments. I posted a short note that said "great article - well done" but they have not published it.

It might be a good idea if lots of people send in comments on this article. If the Philadelphia Fire Department keeps their fireground channels encrypted, then every other FD in the USA might follow their lead.

Think of yourself as a 2 by 4 - if you get yourself wedged under the tire before the truck starts to roll, then you can prevent a 100,000 pound deadweight from rolling down the hill.

"Fred Hambrecht Sr." wrote:

> If losses can ony be IR or dielectric then how do you reconcile mismatch
> losses.

When the load presents a mismatch to the line, a standing wave ratio greater than 1:1 occurs. That increases the rf currents flowing on the line. Higher currents result in greater I^2R losses.

> If it is solely IR, how do you explain the low loss of RG6 at 500 MHz Vs
RG8
> or 11? The wire diameters are much larger in the 8 and the 11. I would
agree
> that for a given piece of coax that increasing the frequency will increase
> IR losses. That answer is based on a fixed set of conditions.

Mainly because RG-6 uses a lower loss dielectric (foam) than RG8 or RG11 (solid dielectric). I will agree that for a given outer diameter and dielectric material, 75 ohm cable will have lower loss than 50 ohm cable.

Very good article, overall, for a "general circulation" type of rag.

But part of it amazes me, as it has for years when folks talk about trunking - even people who SHOULD know better. "With only 14 places to go, some transmissions will not be heard say, if more than 14 units want to transmit at the same time." and "Only one officer can talk at a time. Every one else gets a busy signal when they key the mic." Is this something new or difficult to understand? Gimme a break!

If 25 officers all need - and were able - to talk at once, who are they gonna talk TO? Hello? If they had 10,000 talk groups, what good would it do for an officer's radio to switch him to unused talkgroup "9999" if there's nobody on the other end to listen? Hello?

Am I missing something here? AFAIK, for a conversation to be effective, there must be at least two people - the speaker and the listener. You can add talkgroups (or frequencies) til the cows come home, but does trunking add dispatchers or officers to the system?

Harry

Source record: 39949

I am shortly going to be heading off to Lake Tahoe over Highway 80 and returning on Highway 50. It would be really nice to be able to hear from Caltrans radio traffic directly about the road conditions, rather than listening in to the often outdated AM radio transmissions they provide..

It would be great if you could post or point me to a site with the current Caltrans frequencies for Tahoe and the I-80 and I-50 approaches. The Bay Area stuff plus Trinity County is much easier to find

Thanks

Peter

Depends what frequency you are listening.
I believe that if you are close to the ACARS transmitter, or airport, then
try narrow FM band. I get things decoded very easily and clearly.

Thanks for the links & tips Steve, I will dl the software and see what its
all about, I am using the winradio suite of software and yes I know its
probably not the best, never thought to look around for anything else,
As I said I have excellent success with jvfax in dos for hf fax only, I
have never bothered with sat fax as the pagers on the hill beside me swamp
them out completely, not even a trace of them,
Cheers,
Gus

Personnally I don't like LMR-400. The center conductor is copper coated aluminum which does not take much flexing. I have tried the cable from cable experts and it seems to be decent stuff although it may have slightly more loss than the LMR-400. I am using it on 2 meters so the loss is not that great.

NOAA satellite wefax and HF wefax are two different technical formats. To decode satellite wefax requires special application software.

6522. Re: ACARS Question: What Mode On Radio ?

Newsgroup: rec.radio.scanner
Date: 2002-12-21 01:18:05 UTC
From: grenner <regencytr1@hotmail.com>
Message-ID: <3e03c152$0$4474$a1866201@newsreader.visi.com>
Source record: 39962

ACARS VHF is 131.55 AM in the US. SELCAL has many frequencies throughout
the world check
http://www.ute-monitor.org/aerolist/

SELCAL is on the voice frequencies since it is only a series of calling
tones. I use the Airnav products to decode ACARS and SELCAL, a bit spendy
but well worth the money in my opinion.

http://www.airnavsystems.com

I think he's saying Canada too...

I just thought the BC785D wasn't legal because it didn't pass CRTC hardware standards or something yet.

The BC785D is NOT banned in the US. It has been FCC approved for sale,
but is not yet available for sale.

>Anybody know what the sufficent elevation of NOAA should be to be heard
>well enough and decoded?

It depends on your elevation, antenna, obstructions surrounding the
antenna, feedline length, quality of your receiver, and time of year.

Anything under 10 degrees is pretty impressive. Some can get down to 6
degrees. I see signals at 10 degrees both east and west, but 15-20
degrees gives nearly perfect images.

If you see something too far down on the horizon, you'll be seeing
areas other than your own. At 15 degrees my location is all the way
over at one edge of the image, and I'll either see way off the coast
into the Atlantic, or west to the Dakotas. I'm in Maryland.

I uploaded one image from Dec 18th to my webpage:

http://www.swssec.com/jpegs/noaa-17-12181544-msa.jpg

That is a near-perfect NOAA 17 pass at nearly 90 degrees (straight
overhead) The cross is my location. You can see I've got from above
New England into Canada, down almost to the tip of Florida, out
400-500 miles into the Atlantic off the coast, and west past the Great
Lakes, which are covered by clouds.

This is using less than $300 in hardware and WXTOIMG free receiving
and processing software.

Contrary to Lou's rants, it behooves anybody in the US to pick up on a
bit of Spanish if you want to get your order right if that has become
the norm in your community.
My OM, 74 this year, can do it (since his $150k Charlotte neighborhood
has gone almost totally Hispanic). And he loves the fun (and irony) in
it as do the people he now has to deal with.
Its all smiles and broken jokes...while the next guy just goes on an
angry rant and will probably get cheated on his change.
Those who categorically refuse to play the game might as well be left
behind...as they rightly should be...and will be.
There's no We vs. Them battle that needs to be fought. I'd rather hear
a Spanish accent at McDonalds than some marble-mouthed suburban Anglo
kid who I have paid for his education.

These are the same folks who go to a non-English speaking country and
think that if they YELL loudly enough at the natives, they will
somehow understand the English.

You got it right! They came here to WORK and get ahead - just like my ancestors did. There are ins and outs as to HOW we ought to manage the situation, but I'll never fault someone who is here looking to get ahead in a legal fashion. I try to treat people with respect and almost invariably get the same in return. I'd bet I am a good deal more difficult for them to put up with than vice versa.

Besides, Spanish is a very easy language to learn, very easy. It's logical, easy to pronounce, and very easy to read and write. I've learned four languages beyond English, and Spanish was the easiest of the four to learn, by far. If you start to study Spanish, you realize how much Latin grammar has found its way into English. Spanish was also influenced by the Greeks (and English has quite a bit of Greek in it, too).

Jackie

They all lie about the range of their cordless phones. I guess the
testing companies get paid for results, eh?

If you ever find the time, take one of them out to a desert on a
cloudless day and see if you can get a dial tone at the ranges they
claim (*any* manufacturer). Then see if you can actually make a
call. (I have found ranges where I could get a dial tone but it was
way too messed up to actually make a call.)

Here's one list, looks pretty accurate from what I can see...

Ch 1 car-to-car - 859.7375
Ch 2 local - 859.7375
Ch 3 I-5 north - 858.9875
Ch 4 Chico /Oroville - 859.9875
Ch 5 Forrest Ranch - 860.7375
Ch 6 Butte Meadows - 858.9875
Ch 7 Woodland/Sacramento - 858.7375
Ch 8 Sacramento/Local - 856.9875
Ch 9 Sacramento/Hwy50 - 859.9875
Ch 10 Placerville - 858.7375
Ch 11 Stockton - 856.7375
Ch 12 Kyburz - 858.9875
Ch13 Echo Summit/South Lk Tahoe - 860.7375
Ch 14 Auburn/ Marysville - 859.7375

Can anyone direct me to an online resource for Northern NJ freq's [Essex County]?

Also, can't seem to find a good site for disposition codes -- except for the 10- codes. Any other resources out there? [preferably NJ-specific if it separated as such]

Many thanks!

Talented people usually know how it works but can't seem to get it across to people who would little care. If YOU know how it works, it's just a matter of deciphering the usage of all the doohickey buttons on it, 65% of which are probably generic concepts. Push 'em till you figure it out!

Steven, not on all 39000 posts yet...(it's 4:20 am, give me a break)

Especially the English in boarding schools...

English and Spanish have basically the same sentence structure, but Spanish (like all Romance languages) is more highly inflected than English. Learning how to decline verbs is a real pain in the toches.

I'm a fan of RG-6 too. One possible drawback is the inability to solder to the aluminum shield. I either by it with "F" connectors installed or install my own. Then you can adapt to PL-259, "N" or BNC. Contrary to legend, there is virtually no loss in properly installed adapters. For scanner use, RG-6 offers acceptably low loss, good flexibility, and low cost.

Are there any scanners that automatically bypass data channels. My current scanners do not and it is a pain to have to manually lock and unlock them,

My local dept alternates data channels daily.

Thanks, Robert

Nope. In both continents there is only one nation that uses America in it's
name and only one country whose denizens call themselves Americans. You
will never find a Mexican who says he is "American". Ditto Canadians.

You have confused continent names with nations names

Yes, most of the later Unidens have a "DATA" function that does just that... it will sample the freq for a second, then move on if it detects "data" or just "noise." I don't think any of them will lock out that channel though, just do it again on the next pass. Some of the lower-end models don't have it.

In Japanese, the usage closely follows American English usage: "Amerika" means USA unless qualified by "north", "south", or "latin".

6560. DOS Scanner Control Program

Newsgroup: rec.radio.scanner
Date: 2002-12-21 18:06:59 UTC
From: Gene Blair <gblair@netlinkip.com>
Message-ID: <752N9.1054$oxb1.8323135@news2.randori.com>
Source record: 39899

Would appreciate some advice here and many thanks in advance.

Situation: I'm planning to buy the Bearcat 785 when available and will use in non-digital mode for the near future. I have an old-old Tandy 2810 laptop, 80286, with 20 meg harddrive and just basic 1024kb RAM. It's not Windows capable but it's the only computer I have which I can devote to scanner control.

Question: Are there any old DOS-based scanner control programs out there which I can use with that combination and enhance my capability over just using the scanner?

Again, my thanks for any input, Gene.

6561. Need MOT trunking help, please!

Newsgroup: rec.radio.scanner
Date: 2002-12-21 18:19:58 UTC
From: Jerry McCarthy <mjerry@intrstar.net>
Message-ID: <gb2N9.23$BP.2@fe01>
Source record: 39900

I'm new to scanning and the PRO95 but, I have read the book 3 times
and every post here and can't remember seeing my problem.

I can set up an ED system and the scanner scans and works fine.

Every time I try to set up a MOT system the scanner scans but does
not stop on any transmissions. Here are some of the things I've done.

1:The MOT system is in a bank by itself.
2:The trunking mode is definitely set to MOT.
3:Have tried setting the base 800 MHZ freq to both Normal and Ofset.
4:Have tried just the Just the MR freqs, Just the CO freqs, Both MR
and CO freqs together.
5:Have tried difernt banks and diferent starting addresses other than
00.
6:Have tried numerous diferent diferent MOT systems (none work and
all are within easy reception range). All ED systems I've tried
work fine.
7:In program mode when stepping thru the freqs I can hear voice trans
missions but no constant data stream from a controll chanel like I
hear in the ED systems.
8: The only thing I haven't done is enter any talkgroup data, which I
don't think I should have had to because everything is running in
open mode.

Any help you guys can give me would realy be appreciated, I've been
knocking myself out with this thing.

Thanks a lot,
Jerry

Are you sure you actually have the correct control channel for that
system programmed in? In the PRO-95, you don't need to program any of
the voice channels at all. Just enter the control channel(s). If you
don't have a control channel you can receive programmed in, it's
definitely not going to work.

Sean,

I used all the freqs listed for the system in the trunking guide that came
with the system and also Police Call.
Is there something specific I should be looking for to Identify the controll
chanels.

I realy did figure it has something to do with the controll chanels.

Thanks
Jerry

If the result doesn't sound too horrible, I prefer to avoid ending
sentences with prepositions.

Check http://www.trunkedradio.net/ for frequencies. They call out the
control channels in their listings. When you go through the frequencies,
you'll hear the control channel. If you don't, it's probably not the
right frequency (or you can't receive it from where you are).

For Sale: Realistic PRO-2006 programmable scanner

Covers 25-520 MHz & 760-1300 MHz frequencies with AM, narrowband FM, & wideband FM. This is the classic PRO-2006 scanner with hyperscan, 400 channels in 10 banks, & FULL 800 MHz coverage.

This unit has been tested, was working well when removed from service, is clean & in good physical condition, but is sold as-is.

This package also includes the following:
-operation manual, whip antenna, & box

For more info & pictures, see:
http://www.merr.com/users/pmik/pro2006.html

Price is $250 plus shipping. Payment via USPS Money Order only. Shipping via USPS Priority Mail to the US only.

Contact via e-mail

Make sure you have tire chains! You may need them in Nebraska, Wyoming ,
Utah, Nevada and ESPECIALLY in California going over the Sierra Nevadas on
route 80. Four wheel drive is ok! Weather can be bad until about May.
If you ever get caught in snow on route 50 in the Sierras, find a motel
immediately. What a nightmare road in bad weather!!!!!

I vaguely recall that the formal name of Brasil includes the
Portuguese equivalent of "United States" as well.

But in common usage, "American" is understood to mean relating to the
United States of America.

We were using the current name before Mexico and Brasil decolonized.

Has anyone ever purchased a television set at Radio Shack? In all of my 41 years, most of those as an electronics geek, I have NEVER known anyone to purchase a television set there. I've never seen them except in the store. I've seen more Heathkit TV's in homes than I have Radio Shack.

Not always, a couple of things could be going one. One you may have
missed or entered a frequency wrong and if that happens to be the
frequency the control channel is currently on you will not hear it.
Second, I think each of the frequencies is a separate transmitter and
there can be variation from one to another. I know I have a local system that rotates 4
channels as their control frequency and one of them is
extremely weak. If I am not using the right antenna my scanner will track the system (using
a omni) but when it switches to that one frequency
(that they use on Friday) I loose the system tracking (but can hear the
voice if I manually scan the frequencies) unless I put the scanner on
the beam. There is that much of a difference in the transmitters.

I have noticed also, when another frequency is being used as control,
this one weak transmitter provides very poor coverage on the audio when it is part of the
channels being used for talk as compared to the rest
of them.

Just a couple of things to check

Yes you need to set to MOT in both the channels (of all the frequencies
in the trunked group) and the bank.

There is not way of telling what frequency of most systems will be the
control, there is no set rule and it could be any one of the frequencies in the group and
most systems rotate the control frequency daily to
reduce ware on the transmitters. There are a few systems set up that
they don't bother to rotate the control channel and then those are easy
but you have to listen for a few days to find out what of the group the
system is using unless someone in your local area knows the system or
has something like the Trunker software that will tell them what
frequencies are reserved for control frequencies.

---------- Original Message -----------

Jerry

PS: is there anything in the trunking guide or Police Call that identifies
the controll channel from the rest of the group?

Walt,

I'm begining to think maybee you are on to something with the rotating
controll channels and transmitters !!!!

I realy appreciate the help !!!

I'll check it out.

I'm going to post on the group to see if there is anybody else in my area
who can get this system to work.

REALY, REALY, STUPID QUESTION. Is There ANY Possibility that this can be a
problem with MY RADIO ???

Thanks Again,
Jerry|

I REALY hate to be redundant but, I realy can't find out how to set both the
BANK and the CHANNEL to type MOT.
The book only seems to tell you how to set the BANK.

Gosh, who is that wrote this little poem that's stuck to my brain for lo
these last forty years...?

"I lately lost a preposition;
I thought he hid beneath my chair.
And angrily, I cried, 'Perdition!
Up from out of in under there!

"Correctness is my vade mecum;
And straggling phrases I abhor.
And yet I wondered, 'What should he come
Up from out of in under for?"

Cheers,
Fred

I doubt very much it is a problem with your radio. What town are you in
and where did you get the information for the trunked system? I have
found a lot of information printed or on the internet is outdated or
just wrong so you can not always go by that.

I think the country is just called "Estados Unidos de Mexico" (Mexican United States). The Mexican provinces are also called states, just like here.

"Estados Unidos Mexicanos"- "United States of Mexico".

Mexico has states too, just the like USA does.

Rrrrrp. Wrong.

The name of Mexico is Los Estados Unidos Mexicanos. The United Mexican States.

Brazil is Estados Unidos do Brasil. The United States of Brazil.

"America" is not in the name of any other country in the Western Hemispnhere except for the USA.

All Latinos in the Hemisphere, however, consider themselves "of the Americas" or American. South Americans are "Sudamericanos" and Central Americans are "Centroamericanos." The group of Latin American nations are members of the Organization of American States, or the "OAS" (Organizaci&#65533;n de Estados Americanos."

6598. Re: Need MOT trunking help, please!

Newsgroup: rec.radio.scanner
Date: 2002-12-22 03:24:27 UTC
From: Jerry McCarthy <mjerry@intrstar.net>
Message-ID: <A9aN9.218$BP.105@fe01>
Source record: 39938

Walt,

I'm in Dunn, NC and I got the Freqs from the "Trunking Guide" & the newest "Police Call" and a few local sites on the net. All seem to agree as far as the Freqs go.

Thanks,
Herry

I was born in Newark [late 1940's] and was a resident of same until 1972. As a kid, I had a portable, VHF radio that I bought at the Lafayette Radio Electronics shop that was situated way down on Broad Street, off a side street.

My dad and I used to play cards and checkers on weekend nights and listen to the radio. At the time, Newark PD was in the 152 Mcs. area. Dad was a life long resident of Newark, would tell me stories of his childhood in the streets, while we listened to the radio.

I used to have the "red book" directory of Newark streets and used to follow the calls. My dad was way ahead of me...!

I remember that there was one dispatcher, "Walt". He had this very deep voice and to acknowledge a transmission, he would always say, "yeeaahhOoookkk.."

I also remember that "Dewey's" was the towing company that the city contracted to remove vehicles and tow them to impound, which I believe was down on Doremus Avenue...

Thanks for the walk down Memory Lane...

Alain

If you look at a reliable reference,s uch as the CIA guidebook, you see that
the usage in English and Spanish is:

conventional long form: United Mexican States
conventional short form: Mexico
local short form: Mexico
local long form: Estados Unidos Mexicanos

The term, "Republica Mexicana" is used in official documents as the legal
name for the Estados Unidos Mexicanos together as a collective body.

Ever notice that many of the old communist dictatorships had long names
like
"Democratic Republic of Korea" "Democratic People's Republic of
East Germany" or such. And then compare that to a country that really
has democracy "United States of America".

Where did the name "America" come from anyway? Heard some
urban legend that "America" was the name of some mapmaker the
king of Spain's staff hired to compile the discoveries of the New World
into a map. He drew the map, and signed it with his name at the
bottom. The King said something like "Oh, we're going to call the
new world 'America'. Okay." when he saw the name on the
bottom. So the most feared and dreaded nation of the world
today is named after some guy who drew a map.... :-)

"Interesting. Somehow, I suspect though that cable companies petitioned for the adoption of this regulation to the CRTC."

I can't think of a reason why cable companies would *want* to go to the trouble. In any case, simultaneous substitution is easier than the previous CRTC requirement that all commercials in *any* program on a U.S. station be deleted and replaced by public service announcements (so that, for example, GM of Canada would not benefit from Canadian cable viewers seeing U.S. commercials for GM cars, and therefore would be likely to spend more money on TV advertising in Canada).

"I expect they don't have Pizza Hut or Radio Shack, and McDonald's is just a name so not really English."

At one point there was a big stink over the Eaton's department store chain; the Quebec authorities demanded that they remove the apostrophe from their signs, since the mark is used in English but not in French. (When I looked a few months ago, Eatons no longer uses the apostrophe...but no longer has stores in Quebec.) McDonald's apparently was exempt because it was a foreign company that was just using its own name.

During the Cold War, I got into the habit of assuming that the more
times they used "Democratic" or "Peoples" in the name of the country,
the further they were from democratic.

6616. DIY Discone?

Newsgroup: rec.radio.scanner
Date: 2002-12-22 09:50:32 UTC
From: asymmetric <all@biosys.net>
Message-ID: <8e1b0vk3hml1u5jimqbtp37il4n3std58n@4ax.com>
Source record: 39856

I've been looking around the web for general information on discones, and specific information on constructing one. I've found several good links as far as the construction goes, but being relatively new to scanning and completely new to antenna construction, some of the details escape me.

I have a couple of questions.. all relating to antenna construction, but not terribly related to one another.. answers or suggestions to any/all of these is greatly appreciated. All refer to construction of a discone made from radials/spokes, which I guess is the "normal" way of building them, even if the strict definition involves actual sheet metal and not radials.

1. In hooking up the feed, what exactly needs connected to what? The construction instructions I've found all assume (apparently) that something so basic is just implied knowledge. I'm interested in just what electrical connections must be made between the radials for both the disc and the cone, as well as from each to the feed.

2. My reading suggests that the radials must line up exactly to properly form the triangle of mast / disc / cone, is this a correct assumption? To clarify.. when viewed from above, should the radials on the cone be lined up perfectly with the radials on the disc?

3. I want coverage from 29 - 1300MHz. 1/4 wave for 29 is roughly 8.5 feet, and that's just too darn big and ugly to throw up on the roof of my house. I've seen suggestions (and commercial products) that say you can use a vertical whip for the lower frequencies if you mount it over the disc. As per question #1, what's the electrical hookup for the whip?

4. Assuming some kind of problem or serious drawbacks to #3, would it be reasonable to build a 16 (or 32) radial discone where all the radials alternate between one length and another? Say 8 radials for 29MHz and 8 for 290MHz, interleaved and evenly spaced around the axis? If there is a problem with this, what about keeping the disc radials where they are, but inverting the cone radials for the higher frequency?

5. Related to #3. What about mounting the whip inside the cone instead of above the disc? If this isn't a good idea, who about mounting the whole contraption upside down, and using some of the mast length for the lower frequency whip?

Thanks to any and all who respond.. I'm eager to get started on this project and may just go ahead with building the 290+ discone since

it's rather small. I could use it now and if #5 or #3 pan out to some degree, then all I'll have left to do is the whip and the hookup.

At the very least, just building two of them and using a switch on the feedline near the scanner would be enough I suppose, since most of my scanning isn't simultaneously in both "bands" I'm trying to cover here.

I am assuming the Motorola systems you are trying to receive are somewhere else nearby. What city/county are they in? It doesn't do much good to tell us you are in Dunn NC if that is not the system you are having trouble receiving.

The info I have for Dunn NC is that it is an EDACS system. The following is from trunkedradio.net

System Info

Dunn Public Safety System
Dunn, NC

System Name: Dunn Public Safety
Location: Dunn, NC
County: Harnett
System Type: EDACS Regular
Last Updated: 03-24-02 19:32
Hits: 25

System Frequencies

Made in Europe, sometimes means one of the former Sovjet states, another country in the Eastern part of Europe or maybe Turkey. It does not imply the equipment was made in a country in the European Community. This, of course, is a new development not seen 10 years ago.

Actually, Vespucci's claim to fame was that he was the first explorer to recognize that the new lands found were not Asia, as Columbus and others had believed. About the same time his friend Columbus was sailing around, Vespucci was exploring and mapping for the first time the Northern and Eastern coasts of South America.
His mapmaker friend Martin Waldseemuller is credited with 'inventing' the name which he did to honor the explorer. Waldseemuller's name only referred to South America at the time but the name caught on to describe all of the New World.

The name came from the name of the explorer & mapmaker Amerigo Vespucci. He
was the first to actually make landfall on the American continents.

6624. 780XLT vs. 895XLT sensitivity

Newsgroup: rec.radio.scanner
Date: 2002-12-22 14:57:43 UTC

How does the sensitivity of these two compare? I had an 895XLT that I sold and am considering a 780XLT. I found the sensitivity of the 895XLT to be outstanding especially on the VHF low band. I'm hoping the 780XLT will be the same......

In Spanish, it should be called "Estados Unidos de Norteam&#65533;rica." But no one
gets upset over it.
>
> The translation would more-correctly be "The United Mexican States of
America."

No, it wouldn't. The translation is "United Mexican States." "America"
appears nowhere. Nor is it ever used in conjunction withthe name.

And Mexicans in proper discourse refer to "Americans" as "norteamericanos"
or "North Americans" since in Spanish an American is anyone form North,
Central or South America.

However, more and more people in Latin America now refer to those form the
USA as, simply, "americanos." It depends on the context. In fact, famous
singer Piero form Argentina did a parody of tourists from the US in 1969 and
called it, "Los americanos."

It never calls itself "The United States of Mexico." It is "The United
Mexican States." (Estados Unidos Mexicanos)

And most government documents and references use "La Rep&#65533;blica Mexicana." Or
just Mexico.

Amerigo Vespucci
1454-1512

Explorer

Italy: Florence
Iberia

Raised and educated in Florence, Amerigo (also Americus) Vespucci was a merchant and navigator who sailed to the new world on two (perhaps even three) occasions, sailing for Spain and for Portugal. He made his most significant scientific contribution to the Age of Discovery when, through astronomical observations off the coast of South America, he confirmed that the lands Columbus had encountered were not Asia but were in fact an entirely separate continent. The letters he wrote describing his travels were published and widely distributed in Europe.

Vespucci owes the use of his name for two continents to the German clergyman and scholar Martin Waldseem&#65533;ller, who had read of Amerigo's travels and chose to call the new lands "America" in his honor when printing a wood-block map.

Well, if our politicians keep kissing their butts, in another generation, it will be The United Mexican States of America or is it "Mexico"? They'll have enough voting power to change the name too.

We cater to them more than anyone else coming into this country and a majority of our downfall from drugs comes right from there, or through there.

If THEY don't like US referring to ourselves as the UNITED STATES OF AMERICA, then why the hell don't they stay where they belong. No one asked most of them to come here. I live in a very quiet respectable neighborhood. WE recently had 10 of them who were imported here for "slave" labor you may as well say.. A landscaper bought a house here in town without telling anyone his plans, to put them in rent free while they worked for him on a work visa. They weren't here 2 months and a stabbing took place as a result of them. Our people were up in arms of them being here to start with and that incident only served to underline their concerns. They are "reportedly" coming back in spring. Our zoning doesn't stop it from happening. I can only imagine what this next round will be like. Between them and one family - recently evicted, our crime rate rose 75% in one year..... They are gone and our town is back to normal.... Speaks for itself. I'm not saying they are all bad.... But I sure don't like the precedent I'm seeing played out.

I used the Woodhouse turnstile. About $135 kit if I remember
correctly. Assembles in fifteen minutes.

http://www.view2earth.com/catalogue/hpod.html

Antennas are critical for APT. Discone won't do it. The Woodhouse is a
very popular APT antenna, and consists of crossed dipoles at 90
degrees and a coax balun to match them. You mount it with one set of
elements facing north-south because the satellite passes are polar.
Some or most of the birds are circularly polarized.

I went into a Radio Shack in a major mall not far from where I live here in
Vancouver BC and was really surprised at what i didn't see.

Went to a Radio Shack in the 1980's and you could get all kinds of
electronic stuff (I bought a 40 Ch CD Radio and antenna sold by Radio Shack
under their Realistic brand name for a Honda GoldWing motorcycle I had at
the time). All kinds of electronic parts were sold in that place.

So I go in now to look for a good scanner to see if they have one, and there
weren't any. In fact their electronic parts selection were pretty dismal.

Even the Canadian Radio Shack web site's selections are pretty dismal.

With name like "Radio Shack" you'd think they would be a place to find
specialised radio, such as VHF, CB, scanners, Ham
radio gear, handi-talkies, etc. etc.

---> Here is my reply to what Paul Keenleyside wrote 12/22/2002 11:42:50 AM

It is all true but they are not the first, how about Heathkit, Lafayette (sp?), team and others who once had about every thing you could want and now you can not find them.

The reason is simple, they are not making the profit levels they need on those products or they would keep them. Mail order houses with lower overhead and lower prices, internet sites with lower overhead still and lower prices all play a part. The main issues is we, yes we are not buying so they stop selling. I can't tell you how many people I know who would mail order their parts because the cost was a little less then when they needed that one special resistor (or what ever) would spend the 98 cents at radio shack to finish their project. I am not saying it is wrong or right but it is the direct result of what sells and what doesn't

I have heard that many products (particularly clothing) labeled "Made in the USA" are in fact made on some Pacific island (Saipan, perhaps others too) that is controlled by the USA -- and made by workers who are imported from Mainland China and kept in horrible conditions with few of the rights that inhabitants of the 50 States enjoy.

More than half the prescription drugs sold in the Continental US, and
labeled "Made in the USA" are manufactured in Puerto Rico.

:
: Well, if our politicians keep kissing their butts, in another generation, it
: will be The United Mexican States of America or is it "Mexico"? They'll have
: enough voting power to change the name too.
:
: We cater to them more than anyone else coming into this country and a
: majority of our downfall from drugs comes right from there, or through
: there.
:
: If THEY don't like US referring to ourselves as the UNITED STATES OF
: AMERICA, then why the hell don't they stay where they belong. No one asked
: most of them to come here. I live in a very quiet respectable neighborhood.
: WE recently had 10 of them who were imported here for "slave" labor you may
: as well say.. A landscaper bought a house here in town without telling
: anyone his plans, to put them in rent free while they worked for him on a
: work visa. They weren't here 2 months and a stabbing took place as a result
: of them. Our people were up in arms of them being here to start with and
: that incident only served to underline their concerns. They are "reportedly"
: coming back in spring. Our zoning doesn't stop it from happening. I can only
: imagine what this next round will be like. Between them and one family -
: recently evicted, our crime rate rose 75% in one year..... They are gone and
: our town is back to normal.... Speaks for itself. I'm not saying they are
: all bad.... But I sure don't like the precedent I'm seeing played out.
:
: Lou/Tech@DP.NET
:
You would be truly shocked at how many houses in Southern California

are flying Mexican flags on their houses. Would that make them foreign nationalists? Is it OK for foreign nationalists to obtain services from, employment at, and authority within our local governments? Including control over personnel departments? What of people who reject American ideals outright because they conflict with a cultural view of murder, retribution and taboos. Is it unthinkable that some people would be amassing power while others give it away.

If you enjoy experimenting, by all means go for it. But there are some very inexpensive discones out there. A quick Google search revealed the following for $29.95:

http://users.cis.net/kingpop/Discone.htm

>
> 1. In hooking up the feed, what exactly needs connected to what? The
> construction instructions I've found all assume (apparently) that
> something so basic is just implied knowledge. I'm interested in just
> what electrical connections must be made between the radials for both
> the disc and the cone, as well as from each to the feed.

Center conductor goes to the "disk" elements, shield goes to the "cone" elements.

> 2. My reading suggests that the radials must line up exactly to
> properly form the triangle of mast / disc / cone, is this a correct
> assumption? To clarify.. when viewed from above, should the radials
> on the cone be lined up perfectly with the radials on the disc?

Not essential but it looks nice.

> 3. I want coverage from 29 - 1300MHz. 1/4 wave for 29 is roughly 8.5
> feet, and that's just too darn big and ugly to throw up on the roof of
> my house. I've seen suggestions (and commercial products) that say
> you can use a vertical whip for the lower frequencies if you mount it
> over the disc. As per question #1, what's the electrical hookup for
> the whip?

Center conductor connects to the whip. This is really a separate antenna, and will give best performance at it's resonant frequency.

> 4. Assuming some kind of problem or serious drawbacks to #3, would it
> be reasonable to build a 16 (or 32) radial discone where all the
> radials alternate between one length and another? Say 8 radials for

> If there is a problem with this, what about keeping the disc radials
> where they are, but inverting the cone radials for the higher
> frequency?

The elements aren't really resonant. The discone is derived from the "bi-conical" antenna (which consists of two cones, one "upside down" with respect to the other, their apexes nearly touching). Scaling the whole thing larger just increases the frequency range.

>
> 5. Related to #3. What about mounting the whip inside the cone
> instead of above the disc? If this isn't a good idea, who about
> mounting the whole contraption upside down, and using some of the mast
> length for the lower frequency whip?

No good, the cone will shield the whip.

Good luck and let us know how it turns out.

Art Harris

Around here, and in many places, untrunked police and fire communications
have at least two different frequencies in many jurisdictions. One idiot
glomming a frequency about his rude traffic violator can't hold up the
cop who's being shot at.

--
It is better to light just one little candle than to curse the darkness.
If everyone lit just one little candle, the EPA would outlaw candles.

LAPD's new digital (NON-trunked) system gives every patrol division three frequencies for itself... dispatch, simplex-tactical, and a "fallback" repeater. And the primary 16 channels, which are selectable with the dial on top, also include the dispatch freqs for all divisions adjacent to where the radio is assigned. Plenty o' redundancy.

Plus the instant "Emergency trigger" freq.

Then there's the "Assembled in ..." scam. Most recently, I got some
generic CD-R's that say on the liner "Assembled in Canada." Like, what's
there to "assemble"? A machine that sticks the liner and the CD into the
jewel case?

Cheers,
Fred

Most all the Unidens will get 1090MHz, at least those with 800 MHz band
in 'em (excludes only a few bottom-of-the-line models). See
www.uniden.com and go to "scanners" for specs

Well does that apply to scanners too? I would think not since there are not
that many scanner manufacturers and distributors. Radio Shack has had some
very nice offerings in the past, so what will they just give up market
share?

---> Here is my reply to what Roland Stiner wrote 12/22/2002 3:55:26 PM

That is a valid point, I have been a fan of the scanners they sell from the start. I would think, when a decision maker looks at the numbers they have to look at communication electronics (or what ever group they have scanners in) as a whole to base their decision. My mindset when making that comment was more of the parts, components and experimenters items than of their scanners and other consumer items.

The bottom line is that there are less and less options, or so it seems every day and I would think if the business or any segment of the business was profitable they (Radio Shack) would keep it. The trend seems to be moving much more to consumer products but then you can find them (or items like them in any K-Mart, Wall Mart or any local shop) were the components and some of the items they are getting away from there are not a lot of other choices for local purchases any more.

I'm looking for a regular 6AA battery insert for a PRO-43 handheld.
Is this still an item stocked by RS?
If so, anyone know the part # and how to contact RS parts?

If not, anyone know who might have such an item available?

Thanks,

Phil

It's called the "Holder, Battery Case" Catalog Number 10657013 with "NP Part Number HB1081" - whatever that is. This is from http://support.radioshack.com/support_electronics/doc30/30401.htm

the same part number was used in the PRO-62, PRO-63, PRO-44, PRO-60 and several others. Try calling 1-800-843-7422 if your local RS doesn't have it (prob doesn't)

Steve,

Great pictures. Listening to you guys talk about receiving APT has got me interested again. I thought a while back that I would like to try receiving APT but figured my scanner, a Bearcat BC985XLT, would not be up to the task. I read somewhere that the the input bandwidth of the receiving radio needed to be adequate before you would have much luck. I have heard some NOAA birds on the scanner before. Maybe mine is good enough. Just need the right antenna. I currently have a RS Discone.

Just one question. What radio do you use?

Thanks,

Brad Penn

Aww phooey. Oh wel, there is the BC 780XLT to buy.

Anyone know any radio stores in the Vancovuer BC to Seattle WN area that
sell these pups?
(stores that would have them in stock rather than "having to get them from
toronto" or somewhere in the East?)

6665. I don't receive any listening signal between 700mhz and 1300 mhz...

Dear All,

I own a Yaesu VR-500 scanner, and I use it especially for aviation (between 117.00 and 132.00) It's doing a wonderful job for this, as for police on the +/- 150mhz frequency.
But when I go out of these ranges, I don't get nothing else than parasits sounds, and from time to time a tv station in the +/- 800mhz frequency.
Is this because of the antenna or because of my localisation? I'm Close from downtown.

What should I do or buy if I need some specific antenna?

Also, a friend of mine has told me that he once managed to hear the taxi in New York at night. Is it possible being located in Belgium, Europe? And if yes, on what frequency range should I try?

Thanks a lot for your help,

Bruno

I'll tell you what, LOU, when you find people already here in this country who will DO the kind of work they do, show up every day, not scurry off after the paycheck is passed out on Friday and then not show back up when they've blown the cash (usually by Tuesday or Wednesday) with a lame excuse, who will work without an incessant litany of complaints as to how they are treated and not getting any respect; you let us know! You do that; okay, LOU?

Try looking for a 6 aa cell holder with a 9 volt clip on it, file the
ends of the 9 volt clip a little and bend the other a little and it will
fit. Worked for me!

I know there are some inexpensive ones.. but I just want to try my
hand at this. It'll probably end up costing just as much as one of
the cheaper premade ones out there, once the connectors and everything
are paid for.

Thanks very much for this.. probably the single thing that is most
left out of the instructions, yet the fundamentally most important to
make it actually work. ;)

Ok so just connecting the center conductor to the whip and to the disc elements won't cause a problem, or should there be something else in there as well?

>

Right, I follow that.. but there has to be some limit to the upper frequency that it can grab at a certain length.. otherwise, why is it that most instructions say things along the lines of "this will be good for up to ten times the frequency you cut the radials for?"

I'm not grasping where the upper limit comes from in regards to RXable bandwidth.

Could it hurt the performance of an 8-element discone by having another 8-elements interleaved between the first 8, but cut to a different length? Not that I want to go this route anyway, I think the whip will be fine for lower frequencies.. I'm just curious.

>
>>
>> 5. Related to #3. What about mounting the whip inside the cone
>> instead of above the disc? If this isn't a good idea, who about
>> mounting the whole contraption upside down, and using some of the mast
>> length for the lower frequency whip?
>
>No good, the cone will shield the whip.

Did you look at the second half? What if you did something like that?

Say working our way from the ground up, it goes mast -> whip (integral to mast) -> disc -> inverted cone (radials point out and up instead of out and down)

If the orientation of the cone doesn't matter in this regard, this would be a better use of space.. the whip functioning structurally as additional mast for the discone.

>
>Good luck and let us know how it turns out.

Will do that for sure. The first attempt will probably end up being a
little job hacked up out of wire coat hangers and such for 290MHz+
just to get a feel for how to best mount everything and connect it.
Should be a fun conversation piece to have laying around if nothing
else. ;)

Lou,
I hope the authorities took care of this "landscaper". The penalties to the sponsors of immigration fraud can be very severe.
It sounds as if your community might have a problem policing its own. The precedent you are seeing is not based on language or national origin...its based on your local huckster who is probably skirting a dozen INS regulations and scraping the bottom of the illegal wetback market who would be prey to his scheme.
So before you jack yourself off with another one of your anti-Hispanic rants you might want to consider what you Lou can do to make the inevitable immigration consequences more palatable in your community.
Save your ire for the pig-dogs that killed 4000 Americans last year, not for people who simply come to the US as a matter of economic survival.

Hola,

My Mexican "Green Card" FM3 says Estados Unidos Mexicanos. So does the
national seal.
Since these are issued by the Mexican Govern ment, the otta know.

Cheers amigos,
Z

First of all, if you want to label me a bigot because I CARE about what happens in this country and to OUR citizens, then I wear the badge proudly.... But I DO detest how this country is being torn down and handed to others on a silver platter. As to the INS, it has been proven with 9/11, that they aren't worth the paper the name is written on. Our Borough officials did call the local office. They said unless a "crime" was committed, there was nothing they could do... Some help! The landscaper is still doing his thing. Our community does NOT have a problem policing it's own... WE did go round and round, we got no back up form those who should have provided it.

As for the "pig dogs" they should not be put in prison being fed by our tax dollars and getting better benefits than alot of our own citizens .. Their predecessors who tried to level the WTC the first time around are still there. NO, ALL of them should be SHOT. They didn't spare any lives, neither should we.

THAT is a part of the problem, we cater too much..... THAT is my beef..

Oregon has NINE official languages which appear to rotate amongst twelve depending on the most prevalent foreign culture in the state. I treasure all facets of humanity that are pathetically catagorized by race, ethnic origin, sex and sexual orientation. The fact that he or she babbles differently or eats strange food or even feels affection for the same gender (or both) is inconsequential and a CRAP argument. God doesn't make mistakes, and everything is made by and is of God. That will be enough. You can't beat this dead horse any further! As they say in pubs, "Gentlemen (ladies too) the hour is nigh!"

The radials reflect the signal to the disk and are at ground potential. The disk is insulated from the rest of the apparatus and is connected to the feed line. The whip needs to be on top of the disk to catch more of the signal reflected by the radials. Different length radials will work, but different length elements on the disk will work better, as they are the receiving medium. I've tried many configurations over the years, including a monster with 21' radials and 5' elements supported by fishing line guy wires, and the old Radio Shack discone has performed as well as any I have made for general coverage. Oh, according to my s-meter, lining the radials and elements up makes no discernible difference. Hope my notes help.

According to www.snopes.com, this is urban legend.

The Usa page does not have a directly addressable URL, but you can find it by going to snopes and doing a search for USA. It's the first item in the resulting list.

> I seem to recall that shortly after WW II when the Japanese
> economy began its recovery, they created a town called Usa.

#1 - you won't hear long distance communications with a handheld using a duckie antenna.

#2 - most handhelds are overloaded by external antennas. The bigger/ higher the antenna, the more overload.

What your friend heard from NYC is gypsy cabs operating in the VHF-LOW band (25-50 Mhz approximately) in which skip will occur at times. I doubt he was hearing this on a handheld, but rather on a base model connected to a good rooftop antenna. I live in the NYC area, and have occasionally heard communications in German on 34.50 Mhz, which I subsequently learned was from Autobahn callboxes in Germany. The gypsy cabs are all over the low-band, many times using frequencies they have no business being on.

I've included a U.S. spectrum chart URL - http://www.ntia.doc.gov/osmhome/allochrt.pdf

I figure you're in Europe, and I'm not sure what differences in the spectrum there are between
here & there, but there should be at least some similarity. I would imagine that cellphones and
such in Europe probably operate in the same frequency area that they do here. In the U.S., 700-800 Mhz has been used for TV, but is being reallocated for two-way radio use in the near future. Above 800Mhz, we have a lot of government users, cellphones, amateur radio, and other things. There must be something where you are on this part of the bands, but I think that perhaps a better duckie antenna may be what you need to hear it. There are comparisons between many handheld antenna at http://www.strongsignals.net/index.cgi and places like Javiation in the U.K. where you can order such things at http://www.javiation.co.uk . Supposedly some of these antennas are far superior to the ones that comes with handhelds. The fact that you're sometimes hearing TV stations may also indicate the need for a better antenna, as they're usually high-powered transmissions,
and intermittent reception of strong signals points to the need for a better antenna.

Lou,
Its bigoted because you come up out of the clear blue to rant about
those terrible Mexicans and people who speak Spanish in general as if
there mere presence is an affront to you....cross-posting across five
radio oriented groups, no less. And this isn't the first time.
The USA is now about 15% Hispanic and it makes sense for everything from
Government to advertisers to not totally ignore this market. No other
foreign language group is as large or as widespread as the Hispanic
population....if it were, there would be signs in their language too.
This doesn't take anything away from your life, Lou.
As for learning the language, obviously you didn't read my post to your
last rant a couple weeks ago.
As a society we will be much further ahead if we try to get along and
work to improve things under changing circumstances. That doesn't mean
'catering' but it also doesn't mean treating people like assholes just
because they happen to come from Pittsburgh, Miami or Monterrey.
And if your local landscaper is indeed playing immigration tricks, go
directly to the INS instead of your local Barneys to report the fraud.
Peace, bro.

-Bill M

>Just one question. What radio do you use?

Hamtronics R139. www.hamtronics.com. The thing practically built
itself. 5 channel crystal controlled FM VHF receiver designed for APT
satellite bandwidth.

The satellite deviation is something like 30 kc. Narrow FM is too
narrow on scanners, and wide is too wide to recover usable audio
level.

There are mods done to some scanners to increase the bandwidth by
replacing a crystal or ceramic filter with a capacitor, but it's a
poor solution.

There is one AOR receiver which has the proper bandwidth, and I
believe also the ICOM PCR-100.

The receiver is critical, and you don't want to kill the project in
the early stages by using the improper equipment. Antenna is critical
too, although the birds are so loud you'll hear them to some extent
with anything. The better the antenna, the lower on the horizon you'll
pick up the pass and the more image you will get. The things transmit
constantly, so there's no beginning and end from the bird, only
whatever you can receive. 15 minutes is a decent pass. Also, the
better your antenna, the further either side you will be able to hear.
Straight overhead is a 90 degree pass and of course is the easiest.
East is 0 degrees and straight west is 180 degrees. A real good
antenna may cover 150 degrees. In the image I posted, that was at 88
degrees, or nearly straight up, which you can see as the cross marking
my house in MD is precisely in the middle of the image.

Plug these in and scan them. If you hear a tick tick sound, and some
of them last for 10 or 15 minutes, you're hearing enough to decode a
pass. 137.300, 137.400, 137.500, 137.620, 137.850 megacycles.

Do some web searching and you'll turn up a lot more info. I am only a beginner myself.

No, with ACARS you are better off taking the audio off the speaker or
external speaker jack and feeding your sound card.

Hey Lou,
Perhaps you should read a few books about the history of the American continent. Spanish was much more widely spoken than English in many parts of the present USA. Where to you think the word "AMERICAN" originates from? An Italian. Come on, there's room enough for everybody on this planet.
Regards,

In the spirit of the holidays, I award you 25 liberal points for your politically correct reply.

You, and like minded folks enjoy calling folks bigots, racist, and other pet names of those that would point out a truth.

Utter nonsense! No one group has the handle on perfection, not white, Black, Hispanic, or anyone else. You would have us believe that any statement made towards the less than savory element of a group is an attack on the entire group, thus rendering us deserving of a favorite liberal label.

You pick up the newspaper and read about a driveby shooting, does the image of a freckled faced, red headed white boy pop into your head?

Some members of every group are criminals and lowlifes, the poorer the group, the greater percentage of criminals. Sticking your head in the sand and refusing to acknowledge what is in front of you for the sake of political correctness is pollyannaish at best. Join the rest of us in the real world.

No, I'm afraid replicator and holodeck technology are still just figments of Roddenberry's imagination....

Now if you wanted to CONTROL a scanner, then yes, there's plenty out there. Google "scanner control software" and you will have many choices from which to choose. Add the model of the scanner you want to control to the search and you'll narrow it down to what you need.

> s-meter, lining the radials and elements up makes no discernible
> difference. Hope my notes help.

The rods in this case are a substitute for a solid disk and a solid cone. They are non resonant and shortening them will effect the lower frequency performance. The cone section should not be seen as radials- and are only at ground potential where they attach to the shield of the coaxial cable. The discone is a degenerate form of the bicone antenna- the cone section is part of the antenna and contributes as much to he field pattern as does the disc.

The most difficult portion of a discone to build is the attachment point between the disc and cone. Ideally, This should be a conical section maintaining 50 Ohms as the coax transits through the cone. Hi frequency performance is limited by how well this transisiton is machined- only way to properly make it is on a lathe with the cross feed set for a bevel cut.

Matt with ACARS you do NOT want to use the discriminator tap. Do you
have the audio plugged into your 'line in' and have you opened your
sound card control panel and selected the 'line in' as the source?

---------- Original Message -----------

I am currently using a pro-91 scanner and WACARS. I can hear the ACARS
signal but WACARS won't seem to recieve it. I have the scanner hooked up to
the computer from the headphone jack. Anybody know what I might be doing
wrong? I was thinking I might need a dicriminator tap and wanted to know
where I could find instructions to do this.

Thanks in advance for any help

discriminator tap is only good for FM. there may be am taps. but not much info about it. open up your volume panel in your task bar. Click on options, then properties.
Click recording and make sure your line-in and microphone is atleast checked. Press ok. Now to and make sure there is a checkmark in the box that says select undre line in. Put the volume for the Line in record about half way. adjust up or down to get a clearer decode. Have your scanner colume just below half. Or adjust the scanner volune to where it does not sound like the transmission is distorting. usually between a quarter and half. good luck. it should work. use your line in like the other post says.

Just went to order a bunch of parts from RadioShack.com (the OLD RS Commercial catalog which sold thousands of various electronic components and hardware items). Well, they had NONE of what I wanted, its ALL been *DISCONTINUED* (boo-hoo-hoo!)

Need to find another supplier of electronic parts and hardware. Prefer a supplier which does NOT charge $25 or more for a minimum order (Allied Electronics has such).

Would appreciate any phone #'s and/or web addresses for good suppliers of electronic / hardware components!

TIA,
Vic

Source record: 39752

The CDPD protocol attempts to use the unused time on voice channels to transmit the digital data. The air-stream actually hops around as dead air-time is used on the channels at a given site. The packets are encrypted and you are not going to be able to decode these.

The primary users on any CDPD system are MDCs - Mobile Data Computers, as opposed to the obsolete dumb terminals commonly referred to as MDTs - Mobile Data Terminals. In our area the MDT (ElectroCom equipment, with GE transceivers) has been phased out in favor of the MDC approach. We use mostly Motorola MW 520 machines around here, though there are some Xplorers and Panasonic ToughBooks used. All use Sierra Wireless modems.

There was software out there to receive the MDT transmissions, though I have never tried it.

The CDPD stuff is not scannable.

Here is a link that you might find interesting. Sierra Wireless is one of the big names in the subscriber end of the CDPD market.

Dear Fred,
I can't quite grasp what you are trying to tell me. "Political
Correctness" is an over used phrase and means what? I am amazed why
so many users of this group want to air their political thoughts hee.
Why not go down to a bar & do it? I like short wave radio, do you?
Regards

Of course I like radio, however it is not the do all be all of my universe.
When I come across an asinine statement in a newsgroup or a bar I respond.

Political correctness was best defined by George Orwell in his novel
"1984". It was called correct speak. May I suggest you check it out at your
local library if you really are interested in the definition.

Few people are aware of history... There were provisions in the treaty
that ceded California to the United States by Mexico that stated that
Mexican citizens would be free to cross the border at will, that
Mexican nationals would be allowed to do business and attend schools
in California, and that these people would not be required to learn
English to participate in their normal everyday lives in California.

I live in a neighborhood populated primarily by Mexicans and
Central Americans. They are the nicest people you could hope to meet...
two parent families with kids. They are law abiding, church going folks
who respect and appreciate America a lot more than some people who have
lived here for generations. When I think of what it means to be an
American, they are what I think of.

See ya
Steve

Shot the hell out of my History! Our books taught that the INDIANS were the majority here, before the arrival of those from Italy and so on. I've never heard of them speaking "Spanish" - however, if they did, then so be it. I wasn't there, so I can't defend or deny it. I can only go on what I've been taught.

I'm basing my statements on current day. MOST people are able to speak English - and do - however broken it may be......I just can't see why the catering to a "specific" group when many inhabit this country. Where is the fairness?

Eh, let God sort it out. It's more his line than mine.

If possible, try this. You have to be creative. Buy a Scantenna monitoring antenna. Use the Radio Shack vhf/fm/uhf mast mount preamp. Physically mount the Scantenna inside an appropriate length of ABS "pipe". Using a 4 inch it would be a tight fit and the two pitchfork extended elements will not extend fully. Paint the ABS pipe whatever and mount it as high as possible. Put a dummy exhaust vent on the top of the pipe. Using RG6 coax painted whatever route the cable inside. There is an old saying that the worst outdoor antenna usually is better than an indoor antenna.

In time coat hanger wire will rust. I recommend using #12 copper wire.
That's what I have used for many years and it works will and oxidation has not been a problem. I also seal all RF connections with RTV.

Step 1. Visually get his attention while on the phone. Step 2. While seated do a Sharon Stone imitation at him. He will stop his cellphone call. Step 3. When he approaches you cuss him out. Step 4. Results will vary.

None unless you transmit. The impedance mismatch is insignificant on receive. RG-6 is all I use and it works fine. Be advised that by design a discone is broad banded but has little or no specific frequency gain. You are not doing yourself any favor by using a discone. I know I used 4 tower mounted years ago before I became informed as to their lack of gain. I highly recommend using a Scantenna and the Radio Shack VHF/FM/UHF mast mounted preamp. RG-6 coax is fine. Mount the Scantenna as high as possible.

Step 1. DO NOT WASTE YOUR MONEY ON AN R3.

Step 2. If you are interested in an electronic item that basically is a 5 inch monitor with a 2400-2600 mhz. scanning circuitry incorporated, email me at: <jwilson9@erols.com> and I will provide ordering information. It costs approximately $400 and it is NOT sold in the US. I have had mine for almost a year and it works great.

1. INMARSAT Type A and B systems are still active in lesser numbers than earlier years. At my location I can receive both the AOR-East and AOR-W INMARSATs.

2. Only you and no one else can decide whether or not to expend the necessary monies to configure a system.

Message-ID: <3E07A6AE.3136DBE@erols.com>
Source record: 39764

No, even if there were any adds on to an already insensitive
demodulator would only matters worse. If you want the capability to
monitor
2400-2600 mhz., you need a videoscanner. I have had mine for almost a
year. It basically is a 5 inch B/W monitor with a 2400-2600 mhz.
scanning circuitry incorporated. It is powered by 12VDC and IS NOT for
sale in the US. A 2 ghz. "paddle" antenna is mounted on the case. The
cost is approximately $400 and it works as advertised. The manufacturer
also makes amateur radio microwave system components. Contrary to
common wisdom 2 ghz. ground wave transmissions have a farther range than
one would imagine. Unless you occasion to intercept an analog 2400 mhz.
phone call, you will not monitor any audio transmissions except those
video signals you may intercept that have accompanying sub carrier
audio. There are the proliferations of wireless lans and other data
signals, but there also are security cameras, videosenders, point to
point video links and possible surveillance video. Be advised that most
"interesting" video transmissions are ABOVE
2,450 mhz. If you or anyone wishes to purchase this neat electronic
receiver, email me at: <jwilson9@erols.com> and I will provide you
further ordering information.

<w4jle@charter.net> wrote:

> Can you please direct me to a source for the treaty, I was unable to locate
> anything that showed this using the available search engines.

It's been a while since my school days, but it would either be the
treaty signed by Pico at the Campo de Cahuenga, or the formal treaty
radified by Congress which defined the border between Mexico and the
US. (I think it's the formal treaty.)

As I remember it, the crux of the issue was that the treaty called for
all landowning rights of the Spanish and Mexican inhabitants to be
honored according to the Spanish or Mexican laws; and the Mexican
inhabitants of the territories be given all rights accorded to American
citizens. In essence, this was intended to preserve the established
Mexican infrastructure already in place in the territories and protect
the rights of the Mexican inhabitants and propery holders.

However, soon after this treaty was signed, the California gold rush
started. Laws were quickly enacted which negated the terms of the
treaty, and courts ruled against the claims of Mexican landowners
citing protection under the provisions of the treaty. Land was taken
away from its owners, Mexican infrastructure was replaced by American
institutions, and the Mexican population were never given the rights of
citizenship that they were promised. They were forced to either
relocate to Mexico, or take up drastically reduced social status along
with the Indians. In either case, they had to relinquish the homes and
property that were rightfully theirs. A lot of the hard feelings in
Mexican-American relations over the decades can be traced back to this
breech of promise.

Hope this helps.

See ya
Steve

I lived in Japan for nine years, and had a lot of contact with their version of English. Their method of teaching is primarily rote memorization, with only a little teaching on grammar differences, and differences in meaning between two similar phrases. They do try hard, and I would challenge you to learn their language half as well as the average Japanese learns ours. BTW, their primary written format is top-to-bottom, right-to-left.

Is it possible to utilize the Airmaster (not 2000, but the older DOS version) serial port input device to "feed" WACARS and have it decode the signal from my scanner. I get good results from Airmaster under DOS but would like to utilize the converter setup to feed a Windows based program so I can do more than one thing at the computer as well as sort and track the messages.

Most of us do. Some don't. From where I sit, they SHOULD learn English,
but it doesn't come overnight. In prior eras of immigration, the women,
who often did not work outside of the home, did not learn English, while
the men did. Both of my great grandmother's on my mom's side are
examples of this.

Yet when you go into most Social Service
> Agencies, they have signs up with SPANISH and ENGLISH. We also have Chinese,

> to one group???????

We cater to the group with the largest numbers. It is simply more cost
effective that way. I'd wager that in certain parts of Los Angeles and
Orange Counties, California, that several Asian languages are
represented very well. In San Francisco, Chinese has been a defacto
second language for over 100 years.

WE supposedly pride ourselves on being fair and equal...

The International Space Station is usually active on amateur radio downlink channel during the holiday season. Listen on 145.800 mhz (FM). If you want to track the station to know when it is in range of your location a simple program to download free and use for the station and many other amateur satellites can be found at:

http://www.stoff.pl/

You will need to enter you exact location so have your latitude and longitude as well as the height above sea level for your town or city. The setup of the program is easy, it is colorful, and quite useful.

Another easy satellite to hear (and work with a handi-talkie if you are a licensed ham) is UO-14. For more satellite info check out www.amsat.org.

Nice radio. I have one and never turn it off. Only annoying thing is the sound of relay clicking when jumping from 150 mhz frequency to 800 mhz. The R-7000 does not "click" nor does the much smaller of the three, the IC-R1. Why the noisy relay in the R-100 is beyond me. Don't pay a penny over $400 even if new in the box. 73, Pat

> fairness?

OK, Lou. So the natives lived here once and their language use was overrun by then massive influx of Spanish. The natives perhaps complained but had to yield to the reality.

Then the Spanish influence subsided as it was overrun by then massive influx of English speaking caucasians. The Spanish speaking people perhaps complained but had to yield to the reality.

Currently here a massive influx of Latinos. English speaking caucasians may complain but some parts of the country are currently bilingual, like it or not. That is the reality.

I doubt the melting pot phenomenon will work any more due to the proximity of Latin America and technological advances in communications and travel. Latinos do not neet to severe the contact with old contries like those getting off the boat some generations ago.

Learn Spanish.

Happy Holidays.

I think I've seen them on eBay for $250. If you paid $400, you got ripped.

With ALL due respect Dave,

IT is happening to more than just "my" kids..... Or haven't you been watching the news?
Maybe they aren't being paid less than minimum, but some companies try to beat not paying - any more than minimum or "overtime". If they could get away with paying less than minimum, I'm damned sure they would. And MANY companies are shutting off Health Care. So, your wish is coming true, for my kids, your's - if you have any and every one else's. I wouldn't jump for joy even if you have a job with those "benefits". Here today, gone tomorrow. IT IS POSSIBLE!!!!!!!!! You may be taken from a corporate position straight into a McDonalds just to feed your family.... I would be careful what you wish for - for others, it has a terrible way of biting one in the ass.

May you have a Happy Holiday... Next year it could be a whole lot different!

Isn't that just sweat. Maybe we should welcome their desendants back with
open arms...right? Crap happens in war. We won, they didn't.

Maybe if the Mexican government really gave a rip about her people we
wouldn't be needing to put out armed patrols to keep them out.

I have been looking for a good list of interesting things to listen to
in Essex as well, but have yet to find one... You can probably get
most of what you want (if you know what you want) from the FCC
database (http://svartifoss2.fcc.gov/reports/index.cfm)... But most of
the interesting stuff you will hear will probably come from NYC... I
live in Montclair, and I can get NYC PD/FD/EMS/Transit...

Seasons Greetings,
I have a few scanners I am wanting to sell to make room!

PRO-2045
200 channel Base, fully loaded with features,
in like new condition,
$110 plus shipping

UNIDEN Bearcat BC-760XLT
100 channel Mobile,with antenna and power supply, can be used as a
mobile or base radio,has a few minor scratches on top casing otherwise
works excellent.(does not recieve cell band)
$85 plus shipping

UNIDEN Bearcat BC-200XLT
200 channel hand held, full 800 Mhz coverage,cosmetically a 10!..battery
holds charge well, comes with antenna,charger,case
$100 plus shipping

UNIDEN Bearcat BC-9000XLT
500 Channel Base radio,loaded with features,like new with box and manual
$190 plus shipping

Radio Shack DX-160 Short wave radio
Excellent condition, with SP-150 speaker
$65 plus shipping

If intersted or if you have any questions please e-mail me at
gadgetgru@netscape.net
I will accept Pay-Pal or Postal Money Orders
Thanks

> share?

Because the "market share" you speak of is at the bottom end of the consumer electronics scale. Most people don't have the first clue what a scanner is! I can't tell you how many people see my scanner on my hip and either:
A. Ask me what kind of cell-phone that is or
B. Assume/Ask me if I'm a cop/mall security/a fireman/etc.

When I tell them what it is, they oftentimes ask me why I would ever want to listen to all that nonsensical jargon and code-speak. Sigh.....

Say you run a small electronics store. Would you waste valuable store real estate with items most people have never heard of? Or would you fill that display case with PDA's, pagers, cellphones and laptops? I know what my answer would be. Sorry all you scanner geeks like me, but the scanners would lose. I'd put ham radio gear in the store before I put in any scanner stuff - Hams spend an ungodly amount on their hobby, whilst most scanner users try to get by as cheap as they can (gimme free this or that, look I saved $5 on this scanner, etc.)

-me

I have NEVER had anyone react like that. Even if I'm wearing a mike-speaker
on my shoulder.

6750. California CHP received in ARKANSAS???

Newsgroup: rec.radio.scanner
Date: 2002-12-24 18:53:15 UTC
From: dholloway <dholloway@futura.net>
Message-ID: <x22O9.1262$Eh.177761@newsfeed.slurp.net>
Source record: 39790

The other day I was doing a limit search on my Pro 95 between 40.00 and 50.00. The scanner began stopping on 42.540, and I could tell by the accents of the radio operators that they weren't local - I am in the South US. I saved the frequency and entered it on my base scanners at home, which are both hooked up to outdoor antennas. This Chrismas eve early afternoon, I was very clearly picking up conversations on 42.540 with my base scanners, and noticed that the radio operators kept making references to California cities, such as Palo Alto. Also, they were talking about "be on the lookout for...(auto descriptions). So, I went to google.com and typed in 42.540, and to my astonishment discovered that this is a California CHP dispatch frequency. As I said, I'm down South, in east Arkansas to be more specific. Its very cloudy with rain here today. How can I possibly be listening to California?

---> Here is my reply to what dholloway wrote 12/24/2002 12:53:15 PM

It is very possible, low band vhf has some great band openings and skip. Back in the days when most of the county and state patrols were on low
band with high power systems there were a number of great catches coast
to coast.

There is occasional some openings on VHF high but they are far less in
frequency and in distance than the low band skip.

enjoy

WTF? Why the hell weren't the law enforcement officers monitoring all public radio frequencies? FRS is by far the cheapest 2-way communication available.

This is not unusual, particularly during the daylight hours. The signals
are refracted in the ionosphere and return to earth hundreds of miles
away. Weather has nothing to do with it, but sunspot activity and time of
day do. Sunspot activity varies in 11 year cycles. We're past the peak of
the current solar cycle, so these openings will become less common over
the next few years.

Oh puleeze. Do we know that they WEREN'T monitoring FRS? "All public frequencies" is a pretty tall order, too...

Between the wide popularity and short range of FRS, and varied locations and times of the attacks, it would have been a one-in-a-million chance they'd hear a RECOGNIZABLE conversation on the right frequency at the right place at the right time. As sly as these a-holes apparently were, they probably kept any comms brief and "cryptic" anyway.

If ya can't speak English in the United States of America, then GET THE FUCK OUT!

I'm a Bad American-this pretty much sums it up for me. I like big trucks, big boats, big houses, and naturally, pretty women with big tits.

I believe the money I make belongs to me and my family, not some midlevel governmental functionary with a bad comb-over who wants to give it away to crack addicts squirting out babies.

I don't care about appearing compassionate.

I think playing with toy guns doesn't make you a killer. I believe ignoring your kids and giving them Prozac might.

I think I'm doing better than the homeless.

I don't think being a minority makes you noble or victimized. I have the right not to be tolerant of others because they are different, weird or make me mad. This is my life to live, and not necessarily up to others expectations. I know what SEX is and there are not varying degrees of it.

I don't celebrate Kwanzaa. But if you want to that's fine; I just don't feel like everyone else should have to.

I believe that if you are selling me a Dairy Queen shake, a pack of cigarettes, or hotel room you do it in English. As of matter of fact, if you are an American citizen you should speak English. My uncles and forefathers shouldn't have had to die in vain so you can leave the countries you were born in to come disrespect ours, and make us bend to your will. Get over it.

I think the cops have every right to shoot your sorry butt if you're running from them after they tell you to stop. If you can't understand the word 'freeze' or 'stop' in English, see the previous line. I don't use the excuse "it's for the children" as a shield for unpopular opinions or actions.

I know how to count votes and I feel much safer letting a machine with no political affiliation do a recount when needed. I know what the definition of lying is, and it isn't based on the word "is"-ever.

I don't think just because you were not born in this country, you qualify for any special loan programs, gov't sponsored bank loans, etc., so you can open a hotel, 7-Eleven, trinket shop, or any thing else, while the indigenous peoples can't get past a high school education because they can't afford it.

I didn't take the initiative in inventing the Internet. I thought the Taco Bell dog was funny.

I want them to bring back safe and sane fireworks.

I believe no one ever died because of something Ozzy Osbourne, Ice-T or Marilyn Manson sang, but that doesn't mean I want to listen to that crap

from someone else's car when I'm stopped at a red light. But I respect your right to.

I think that being a student doesn't give you any more enlightenment than working at Blockbuster or Jack In The Box.

I don't want to eat or drink anything with the words light, lite or fat-free on the package.

Our soldiers did not go to some foreign country and risk their lives in vain and defend our Constitution so that decades later you can tell me it's a living document ever changing and is open to interpretation. The guys who wrote it were light years ahead of anyone today, and they meant what they said - now leave the document alone, or there's going to be trouble.

I don't hate the rich. I help the poor. I know wrestling is fake. I've never owned, or was a slave, and a large percentage of our forefathers weren't wealthy enough to own one either. Please stop blaming me because some prior white people were idiots - and remember, tons of white, Indian, Chinese, and other races have been enslaved too - it was wrong for every one of them.

I believe a self-righteous liberal Democrat with a cause is more dangerous than a Hell's Angel with an attitude.

I want to know exactly which church is it where the "Reverend" Jessie Jackson preaches; and, what exactly is his job function.

I own a gun, you can own a gun, and any red blooded American should be allowed to own a gun, but if you use it in a crime, then you will serve the time.

I think Bill Gates has every right to keep every penny he made and continue to make more. If it makes you mad, then invent the next operating system

that's better and put your name on the building. Ask your buddy that invented the Internet to help you.

I don't believe in hate crime legislation. Even suggesting it makes me mad.

You're telling me that someone who is a minority, gay, disabled, another nationality, or otherwise different from the mainstream of this country has more value as a human being that I do as a white male. If someone kills anyone, I'd say that it's a hate crime. We don't need more laws! Let's enforce the ones we already have.

I think turkey bacon, turkey beef, turkey fake anything sucks. I believe that it doesn't take a village to raise a child-it takes a parent with the guts to stand up to the kid and spank his butt and say "NO!" when it's necessary to do so. I'll admit that the only movie that ever made me cry was Ole Yeller. I didn't realize Dr. Seuss was a genius until I had a kid.

I will not be frowned upon or be looked down upon or be made to keep silent because I have these beliefs and opinions. I thought this country allowed me that right. I will not conform or compromise just to keep from hurting somebody's feelings. I'm neither angry nor disenfranchised, no matter how desperately the mainstream media would like the world to believe otherwise. Yes, I guess by some people's definition, I may be a bad American.

42.54 is one of many CHP dispatch freqs used throughout the state, it's labelled the "Green" freq. If you can pick up the unit number prefix, like "21" in "21-50," it identifies the specific CHP office the unit is assigned to.

There's a complete list of these freqs & office number designations at
http://members.cox.net/scanchico/CHP_1Page.doc (MSWord format)
or
http://www.snowcrest.net/marnells/CHP-freqs.htm (plain ol HTML)

The Videoscanner receiver is available at $295.00 including airmail shipping
to any mainland US destination. Payment is best made through PayPal to our
registered address, paypal@videoscaner.co.uk. There is a $20 processing fee
for accepting a US dollar certified cashiers check, which should be payable
to VIDEOSCANNER, making the total $315. Please email us first if you want to
pay by another means.

Most past immigrants from non-English speaking countries did not learn
anything but rudimentary English. The children were the bilingual,
assimilated ones.

What happened with Italians, Czechs, Poles, Germans, Greeks and many others
is happening with Hispanics. It's very, very hard for an adult to learn a
second language, but the first generation does learn and well.

How can they when they don't even try? I think Spanish culture forbids them
from learning English. They watch Spanish TV, listen to Spanish radio and
read Spanish newspapers...

The same as the Germans, Poles, Italians, Yiddish-speaking Jews, etc.
listened to radio in their respective languages and read newspapers in
their respective languages.

Get out of your suburban hell-hole and spend some time catching up on the
history of New York City and you'll see what it was like here during the
turn of the century.

Nothing new has been said on this thread. ENOUGH ALREADY!! We get the
point.

Just like Italians did... the original immigrants used Italian media, lived
in Italian neighborhoods and generally learned very minimal English.

It's an established, proven fact that becoming bilingual in the true sense
requires learning the second language before adolescence. Adults generally
learn new languages minimally and tend to never be bilingual.

I always use the Spanish button on the Kroger U-Scan so I don't have
to listen to the English. It's more pleasant if you don't understand
it.

I assume Hispanics will do the same thing only in English.

You have a good point. We (the USA) seem to actually be nuturing their
native language here rather than nuturing english.

I also might add, I do not have a command of the english lingo myself,
but I can write (a bit) read and speak it. I think anyone who wishes to
become a part of our culture should make a faithful attempt at learning
the english language. I would attempt do the same if I lived in their
country. I think it's a basic respect for each other's culture to do
that.

You should take a poll of how many of the roughly 500,000 gringos who live
in Mexico speak anything but rudimentary Spanish. You could probably use
your fingers and have some left over.

6779. where could i buy the Smiley Super Stick II?

Dear All,

I'm planning to buy a new antenna for my Yaesu vr-500.

Is the Smiley Super Stick II a good one?

If so, does one of you know a good shop where I could order on line?

Thanks a lot,

Bruno

That does not suprise me. I have never been in Mexico. I think Spanish
is a great language, I wish I knew it, now a few words only. Russian is
another that I would just like to know at least a little.

What's wrong with knowing another language? Nothing!

I can only respect someone who knows more than one language!

I should get off my dead A.. and learn one.

Yep...its hard...but lets see some trying ... ok? I used to live in North Miami Florida, back in the 80s. The road signs were changed to Spanish. The schools became bi-lingual. No matter if the kid didn't speak Spanish...thats what they were taught in. BULL. I took my kids and moved to Tamarac where they still spoke English.

Then I moved further North. To Alabama where the only Spanish heard was to the Cuban prisoners in the Federal prison in Talladege county.

Bruno, that model of antenna is actually several antennas, each tuned for a specific ham band.
You need one that covers more of the radio spectrum to pick up various bands. A couple of ham antennas are tuned for more than one band and will pick up more of the spectrum. One that's recommended a lot is the Diamond RH77CA. Another is the Premier RD-98. These are also ham antennas, but multi-band tuned.

One that's specifically for scanners and is said to be a good one is the Watson W-881 "Super Gainer".
As to dealers for these, look at this webpage:

http://www.strongsignals.net/access/content/dealers.html#M

And for a listing of antennas and their band coverage, see:

http://strongsignals.net/access/content/antenna.html - all three, as well as many others, are listed
on this
page.

My mother is Polish, she still speaks it especally when she gets angry.
She's 87 now and still gets very angry sometimes. I love it.

I know, I know this does not have a damn thing to do with radios, but
what the hell.

Happy holidays to everyone everywhere. I'm all done.

I myself don't see it to be a problem if your swr is low enough. What if the antenna was out a bit for that frequency and was not at 50 ohms due to it. the 72 ohm coax may match it well. I wonder though. if in the long run if it would even out. If the swr was below 1.5:1

Its actually been really strong the last week.

Here in Washington we (Meaning a lot of other scanner listeners) have beens haring information on reciving a lot of traffic from Georgia, Indiana and Virginia.

A lot more than usual.

> How does one say McDonald's or Pizza Hut, or Radio Shack in French?

I just ran it past Babelfish and it came up with Hutte De Pizza.

Anyway, we get the same thing in Wales with English / Welsh signs, and if you happen to live in London (not that I can work out why anyone would want to live in a city) you will end up with forms in one of 30 languages.

Why can't governments simply state what is the main language and have all signs in that language. Lets face it, we muddle through when we go to countries that don't speak our native languages.

Neil.

6794. do you know www.aesham.com?

Dear All,

Have you already ordered something from AES ?
Is it risky to pay on line with credit card?
Can we trust them as I've never paid something that way before and I'm still hesitating...

Thanks for your help,

Bruno

Never trust anyone, especially folks like AES with your credit card. They have been known to allow people to run up excessive amounts on their accounts.

The internet will steal your card, your identity, and reissue them to terrorists. Avoid it at all costs.

Remember just because your paranoid, it doesn't mean that are not out to get you...

Merry Christmas.

Hi,
I live in Orlando about 10 minutes away from AES. They are always friendly, courteous, and professional. The used equipment shelf is really impressive in that all equipment is either bagged and sealed or in original boxes and thoroughly checked. Did I mention they are pro's? I would say you could very safely make transactions and know the product you purchase is flawless, whether new or used. Sleep well and wait for your delivery.
Alan

Over the past 10 years I've made a number of purchases from AES and from Ham Radio Outlet <www.hamradio.com>, over the phone and online with a credit card, as well as in their stores, almost always with a credit card. Large purchases ($300+ radios) and small (a $12.95 book).

I have never once been disappointed with their service or products, and have never had a single problem with my credit or debit cards. I once received a ham radio that was dead-on-arrival, and a replacement was shipped out to me EVEN BEFORE I had returned the dead one back to AES.

No system is always absolutely foolproof, though internet security has never (yet) let me down. For myself, I wouldn't hesitate to order from either of these companies again. I actually feel a bit MORE secure ordering online, as at least there's a "trail" beginning at my computer. Giving someone my credit card number over the telephone MIGHT be a tad less secure, as I have no "proof" of entering my order. And if either my phone or theirs is "eavesdropped" on, there's a (very remote) chance the card could be compromised.

Some folks like to use a "debit card" attached to a secondary checking account for online or mail-order purchases... and keep just enough $$ in that account to cover those. Unless they have a purchase pending, they keep close to ZERO balance in that account, so even if the number were compromised, there would be almost no risk of losing anything..

I wouldn't hesitate a bit to buy from a reputable dealer online, (and I consider AES and HRO entirely reputable) especially if it's going to save time or a decent amount of money vs purchasing at some local merchant.

Just my experience and opinion. YMMV

6803. Learn English!!

Newsgroup: rec.radio.scanner
Date: 2002-12-25 03:24:06 UTC
From: "A. Predmore" <apredmore@cfl.rr.com>
Message-ID: <3E0924D5.C370C374@cfl.rr.com>
Source record: 39742

Look,
I work with about 10 spanish speaking people at my place of employment. Of those 10, 3 speak near perfect english, 4 speak good but broken english, 2 speak very little (1 understands), and 1 young lady here from Columbia has a spanish/english dictionary with her always and we enjoy seeing her trying so hard to learn that we help her. She in another year will basically be fluent. There is a Puerto Rican young lady who couldn't care less about speaking one word of english as long as she can communicate with people of her culture while earning her wages. And as she lives in a spanish community she will never ever learn english out of necessity. Nor as common courtesy. Because vocal communication is so important where we work and we are an english speaking company it gets a bit frustrating hearing 'Bagga-da-bagga-da' as the spanish talk amongst themselves. This is America, in America we speak english. We have many dialects yet we still speak english. No english, no job. Want to work and don't speak english ? Better start learning. Everyone comes to the United States from all over to live and learn and be free and be safe. We speak english here and you don't have to go, just speak english. It's our country. Keyword is OUR. Join a club, wear the hat, wear the shirt. Join America, SPEAK ENGLISH. Miami or EAST L.A. can pull a Quebec and try to get the population to think they can get away with something as insane as crossing a line and now you must speak another language, and it in some aspect is that way, but big government must put a foot down and draw the line. I'm sure some will disagree, some will agree, while others will say whatever. I gave my opinion and all without a single word of profanity. It is nice being bilingual and a challenge to learn to communicate in foreign languages. I get a beer buzz and swear in english. Hammer my thumb? Yep, it's in english. What is too cool is now we have 3 Bosnian people and they are accelerating their english learning curve. Because they want to, and they know they must to survive here. Aint America Sweet, Y'all ?

A lot of the best was done in the 60's in Quebec. Do a search on language
learning abilities and you should get it.

Would you please take the rec.antiques.radio+phono group out of
your off topic discussion. For those of you who are newsgroup
posting challenged, it isn't very hard, just take the group out of
the list of newsgroup you are posting to. We really don't care
about your language problems.

> It's real simple. In the USofA you either speak English or GET THE FUCK OUT.

Actually, the USofA is one of those rare birds: a fully
industrialized country with NO official language.

There have been attempts to make such a declaration, and in fact
everytime Congress has attempted to pass a resolution making English
the Official Language of the US, it's been roundly shouted down.
```

So, not only is there no legal requirement in the USofA to speak English, there is less motivation to learn it every day.

If you don't like these facts, you may wish to write your Congressmen and Senators, they're the only ones who can change it.

In English, would be nice.

Not sure what your problem is with AES. I have dealt with them (via 800 phone nbr) many times and have always been treated well. Service was fast, and I've never had any bogus charges on my card. I highly recommend them.

Wishful thinking to be sure. The ONLY thing our politicians are going to
change is their pay scale. They are much too cowed by the politically
correct crowd to stand up for anything but more taxes and increased
government control over you and me. Expecting anything else is pure folly.

6810. using pc to decode pulses (transponder replies)

Newsgroup: rec.radio.scanner

Message-ID: <8aa96b4.0212242106.2ae5b482@posting.google.com>
Source record: 39597

Hi, I'm working on a little project trying to decode transponder replies
from my pro-2004 receiver.. They are little blips on 1090mhz, supposedly the
format is 2 framing pulses at 20.4 microsecs apart, with 12 pulses in between at about .4 microsec each... When I view these sounds visually with
a sound editor I can decode them manually- how difficult will this be as a beginning dsp project? Im a seasonsed programmer, just no realtime experience or sound whatsoever... Would I be better off with the baseband audio/discriminator output from my receiver?

Does anyone know of an api or framework I can use to get started? I was hoping to find some C program that did tacan or CW decoding or something and I could hack it for this purpose. any help at all would be greaty appreciated.

Isa:9:6: For unto us a child is born, unto us a son is given: and
the government shall be upon his shoulder: and his name shall
be called Wonderful, Counseller, The mighty God, The
everlasting Father, The Prince of Peace.

Isa:53:5: But he was wounded for our transgressions, he was
bruised for our iniquities: the chastisement of our peace was
upon him; and with his stripes we are healed.

Rom:10:9: That if thou shalt confess with thy mouth the Lord
Jesus, and shalt believe in thine heart that God hath raised him
from the dead, thou shalt be saved.

Should have said all free public frequencies. It's more likely that crooks will go free than use ham or murs freqs to arrange crimes.

There was a cop within a couple blocks of one of the shootings. I think if the bastards used the frs that time, the cop would have been in range to hear it. Wonder what language they were speaking, actually.

Anybody who uses brief and cryptic comms on a set of freqs known to be anarchistic has got to be put under suspicion.

Well in the San Diego metro area, its mostly kids cursing on one or two freqs, spanish-speaking males talking on 2 or 3 separate freqs, and constant squeal on another one or two. That leaves 7 of the 14 standard channels left for the snipers to talk on, had they been doing the evil around here.

Depending on how you're going to be using it, I would probably lean toward the 60XLT, in that it's keypad-programmable and a true "portable" that you can take it with you easily and run off batteries if you choose..and unlike almost all other Uniden portables, the 60 uses plain ol' AA betteries, rather than a $20 - $40 sealed "battery pack.

You can attach EITHER scanner to an external antenna and AC power supply or DC cig lighter in a car.

The 350A is kind of a chore to program... you have to "search" for the frequencies you want and then enter them in a "private" bank. On the other hand, the 350A does have "common" police & fire frequencies pre-programmed...whether or not the freqs where you're located are among those is hard to say. Ten years ago it was fairly accurate.

I'm assuming you don't need 800 Mhz, as neither of these gets that band. The 350A gets civilian aircraft, the 60XLT doesn't.

The audio on the 350A is somewhat louder than the 60XLT, and it's also probably a bit better able to withstand falling off a table occasionally... and it sits there without having to be propped up, as the 60XLT would need to be held in place by a book or a brick or something..

But for me, anyway, the keypad-programming and the portability would sway me toward the 60XLT in the end. I don't know their "specs" for sensitivity and selectivity, but they're probably fairly similar.

Just my preferences...

Hope that helps

Your "Lord" is no more believable than Santa or the Easter Bunny. If that makes me a heathen in your book... fine with me, though I'd prefer to be known as an adult free of the superstitions the human race picked up when we still lived in caves.

BTW, you were off topic to boot :^)

I will try the search. But surely, the "requires learning
the second language before adolescence" is an exageration.
I have several Asian acquaintances who have come to stay at
my home while studying English -- most were mid to late
20's. They did learn English fluently.

Source record: 39612

Hi all, I came here looking for an awnser.

I saw a news bit on CNN tonight that discribed a box that was installed along side of a highway somewhere in the US. This box apparently has the ability to determine which radio station your car is tuned to!!! It was disigned to make advertising more effective. The box would poll many cars and create a bar graph so that companys would know where the best place to advertise is.

I have taken a fair amount of trainning in the communications industry. Extensive radio theory and all that, in my mind there is no way for any electronic device to determin this. Your car antenna recives all radio stations, then filters the one you desire inside its metal housing, if you will.

If anyone has any ideas on how this could work, please let me know, or even if you could direct me to someone that could awnser this as yes or no.

Thanks
Bill

Yes it was probably the CHP. Here in central Massachusetts I receive them so strongly that they overpower local state police on several 42MHz freqs. Even with my "lesser" base antennae the signals are still incredibly strong.

Who knows...the department I work for monitors just about all of the "public" bands (CB, MURS, FRS, etc) all of the time. With just our rooftop scanner antenna we can easily hear FRS conversations roughly 10 miles away. If we switch a scanner or two way radio onto the tower antenna, we can hear so much FRS traffic that it is unintelligible.

So you mean that the people who first started to convert the americas
to our western standards should still be commemmorated.

Uhhh, was that not some guy named christoffel columbus?

Was that a brit? or a german ? or a dutchy (who owned NY one day)

Geeee, that was a guy from spain.

First come, first serve ??? :)

Get over it, and think that all people should have the right to work
and live. Think of ways that politics and economics can serve the
world around you, and see that if everyone has a decent job and
a decent world to live in, there is no need to fight.
Just respect that some people eat different or speak different but
still have the same needs as you do. Eat and drink and think for
basics

So, go to them and speak with those that can speak english.
Get them to join in your community and understand what drives you
and while you are at it, find out what drives them.

Hint, their cooking aint bad :)

BTW same discussions applies to europe in respect to people from
other foreign countries that migrated over here to seek the pot of gold.

The discussion is for us how to find ways to respectfully integrated them
to our societies, whatever language that might be

grin, i can picture that

> I know, I know this does not have a damn thing to do with radios, but
> what the hell.

well .... If i switch on my shortwave set, I can hear and speak to all of those languages. If i turn on my TV I can find channels where I dont have the faintest idea what they are talking about.

Might it be that without all this, the immigrants were more forced to join in our local communities, on the other there is a good oppurtunity to speak with them.

Within the ham-community those people that love to communicate try and learn some universal language. That might be english, but for me i can chat along in italian/dutch/german/french/spanish and some rude jewish words. Maybe I can pick up scandinavian or east-european words.

I love to communicate, and if I trigger the other party to try and communicate
in some language we both know a few words in, the fun starts.

Really, I know a lot about other countries and their history. This enables me
to speak and respect them, but be respected as well. If that matters :)
Well, to me it does, and discussing things like that on this NG is part of that.

Ed (whose ancensestors were once kicked out of france because they thought different about the bible) (around 1530, so what is new :)

Which is true, but now there is something coming to my mind.
Based on the same experiences here in Europe, that mostly the people
that immigrate for work elsewhere are not the most well skilled cause
otherwise they would not have to seek for work and a better future else
where.

So it might not be disrespect, but perhaps their ability to learn this that
is hindering them. Food for thought is also that while they are hard at
work they get tired and rest at night.

This is a worldwide discussion for which I hope the politicians and
everyone involved find a good formula to let immigrants integrate
within their new community and all people to be happy with that.

The more the world is mixed, the more the world be a better place as
we all learn what drives the other and why and so. Xmas allways makes
me think of that (those darn romans invaded both the jewish as the
arabian world. They should not have done that. Would have saved us a
lot of hassle nowadays)

> the 72 ohm coax may match it well. I wonder though. if in the long run if it
> would even out. If the swr was below 1.5:1

A 75 ohm cable feeding a 50 ohm antenna will result in a 1.5:1 SWR. That should not present any problem.

A local ham who is an avid UHF operator uses 3/4" Hardline (75 ohm impedance from the cable TV company) for all his antennas. The loss of that cable is so low that even with the slight mismatch, it outperforms a lesser quality 50 ohm cable.

You have to analyze each case on its own merits. But loss is loss whether you're transmitting or receiving. For VHF/UHF transmitting, I'd take RG-6 (75 ohm) over RG-58 (50 ohm) any day.

6843. Nextel and Uniden digital scanner.

Newsgroup: rec.radio.scanner
Date: 2002-12-25 16:17:46 UTC
From: Brian <spectra291@attbi.com>
Message-ID: <KSkO9.503700$NH2.34652@sccrnsc01>
Source record: 39632

Just a thought provoking question; can the new Uniden/Bearcat digital (APCO25) base or handheld scanners receive Nextel digital transmissions? I know that the scanners will still be "cell blocked" but the scanners may be able to "hear" Nextel transmissions from an adjacent channel using spurs or harmonics. Will the new Uniden scanners be able to decode the digital transmissions allowing scanner listeners to hear the audio?

I see on Fox News this morning that US universities are upset because
the FBI wants information on all students from terrorist countries and
are resisting coming up with all the information they have on these
foreign students......how stupid.

I could just see the results if Pan Am Tech Services would have
resisted giving the Savak, the Iranian Secret Police, information on
me living in their country.

What's wrong with us? Are we crazy??!!

I'm, personally, for sending the problem home....EVERYONE, Arabs,
Iranians, Israelis, Afghans, Pakistanis, Kurds ...anyone born in the
entire Middle East region. Simply export the problem home and don't
let anyone from any of these countries back in MINE..... They have no
right to our country, none, no more than I have a right to live in
Iran or Bahrain or Arabia or Qatar.....

Damned Liberals think the whole world has a right to our country....

Larry

No, neither Nextel nor other cellular phones use APCO-25 type of
digital, the only type that the Unidens will "decode."

I hate to tell you this, but old Chris did not make it to America on his voyage of discovery. He had four shots at it and never touched the coast of the present USA. Also, he was not Spanish. Please review your references and come back when you have something intelligent to add.

Reg'lar old narrowband FM - and CHP is intermittently using repeaters
(actually mobile relays) on some frequencies... after all these years.

Source record: 39640

Transponder codes are four octal digits 0000-7777
You can simply OR the 3 pulses (3 * 4 = the 12 pulses) with Zero(ASCII) and
print the digit. The simplest way is to capture the 12 pulses and examine
them three at a time, parsing the string.

One need only look for the local oscillator frequency to determine what your listening to. Unless several stages of RF amplification exist, the LO is transmitted to the antenna. This presupposes that all car radios use the same side of the 10.8 IF. I haven't looked into all the ramifications, simply supplying one possible solution.

This subject came up on another list a few weeks ago, here is the answer that was posted.

"Yes, we do know. It won't. It will do only APCO P-25 digital audio. It won't do cell phones, cordless phones, Pro Voice, Iden (Nextel), TDMA, CDMA,
FSK, Morse Code, Pave Paws, ACSB, SSB, DSB, Spark Gap, CW, or anything else"

With all this hoopla about homeland security, why isn't there a
"Terrorism Information and Prevention System" that Americans can really use?
Why not start reporting illegal aliens and criminal alien residents?

Illegal aliens are technically subject to deportation at any time.
Their very presence violates federal law. Lawful permanent resident
aliens-that is, anyone with a "green card"- can become deportable if they
are convicted of certain crimes. These criminal alien residents can lose
their permanent resident status and be deported right along with the illegal
aliens and non-immigrant visa overstayers - if the proper authorities knew
about them.

The Immigration and Naturalization Service is the proper authority to
whom to report the presence of 1) illegal aliens, 2) non-immigrant visa
violators and 3) green card holders who have been convicted of crimes.

Contact your local INS office and ask for the Investigations Division
or the "Enforcement Office." If you cannot speak with an INS Special Agent
from the Investigations Division, ask to speak to a Deportation Officer from
the Detention and Removal unit. Make a report over the phone or go in
person. Officers in the Investigations Division are obligated by law to make
a written record of your report.

If you live in a border area - roughly, within 50 miles of the
border - you also have the option of contacting the nearest U.S Border
Patrol field office to report the presence of illegal aliens. You can call
or go in person. If there is no Border Patrol station listed nearby, contact
the nearest Border Patrol Sector Office to find out if there is a local
sub-station that is not listed on the web site. The group U.S Border Control

also lists additional contact numbers.

Illegal aliens and criminal alien residents might be up to some type of fraud against the Social Security system too, since false documents are a way of life. The Office of Inspector General of the Social Security Administration operates a fraud hotline for reporting misuse of social security cards and false statements on claims-whether by employers or employees.

Prosecuting Social Security fraud has been used successfully to tie-up terrorist suspects, even if they are not illegal aliens. Report criminal violators to the FBI for prosecution by the U.S. Attorney.

Though it has been accused of giving cover to illegal aliens through tax ID numbers, the Internal Revenue Service also accepts citizen reports on general tax fraud including "earned income tax credit" abuse. The IRS' criminal investigation division handles employment tax fraud reports.

The Department of Health and Human Services maintains a hotline for reporting Medicare or Medicaid fraud, child non-support, AFDC fraud, and abuse of related programs.

Also, believe it or not, all male illegal aliens (as well as male permanent resident aliens, ages 18 through 25) must register with the Selective Service System. If they do not register, they can be prosecuted for a felony and fined up to $250,000 and/or be put in jail for up to five years. They also may not then be eligible for U.S. citizenship. And there are state penalties for failing to register. Selective Service registration is conveniently available in Spanish. Report draft registration violators to the FBI for prosecution by the U.S. Attorney.

What will the INS actually do when you call?

It will take the information down, as it is legally obligated to do....and probably not much else. It may get interested in a criminal alien, an alien that's the subject of some other type of investigation - for example an Arab terrorist, an alien smuggler - or an alien who has been deported before.

Non-criminal aliens might be sent a letter by the INS Deportation section, saying, in effect "Dear Mr. Alien, you have been already ordered removed by an immigration judge, or we know you have overstayed your status, please come in to the INS office to be deported, bring one bag." (These are known as "run letters," for obvious reasons.) But even this doesn't always happen.

But none of this should make any difference to VDARE.COM readers. Your report will be on record. The government will know about it - and will know we know it knows about it. The Chinese say a journey of a thousand miles must start with one step. Americans can start regaining control of their borders - and of their nation's destiny - with one phone call.

6861. Digital Scanners: Benefits?

Newsgroup: rec.radio.scanner

i'd be interested to know what the benfits will be for the average scanner user with the new digital scanners from uniden. if you have a pro 43 or an aor 8200 or something in that ballpark, are they now essentially outdated -- except for the full 800. or are the new digitals only reallly useable in cities like LA that have gone all digital on their police bands.

That'll do it. Thanks, Harry.
I know a place where there is a freq list for my city so I can punch in all the numbers I want without having to search. I'm mostly interested in EMS dispatch. Though I see the local high school district has a couple freqs up in the 800 mhz range. I wonder why.

In an online review I read (KC0EAO - http://www.eham.net/reviews/detail/1173?ehamsid=88773ae721a080d7186f37d670af4d8f), the handheld was reported as having two batteries installed in the battery cover area and the other two being inside the unit. Does anybody know what is up with that? It would sure make it tough to change out batts.

I see that it has an external headphone jack so I can hook it up to either headphones or my sound system if it's not loud enough.

As far as antennae, I'm on a second story and the landlord is bothered by permanent mounting of things. Any reccomendations for a good removable antenna that can tranfer between a bedroom window and a car window?

John

I saw a manual for it online, lemme find it. Do you have the Adobe Acrobat reader on your 'puter, (for .pdf forms?) It may be that it's a 4-battery case, and may take a small tug to get it out to get to the other two, lemme look.

hate to dissapoint you

but christmas and easter were both stolen by the christians

Yuletide is what it really is and has nothing to do with the birth of
christ,which i have no problem with,but just wish religion would not hijack
ancient pagan festivals.

i am not doubting the birth of Jesus but on December 25 th i dont think so.

so happy yuletide,but dont et hung up on the religous meaning.

I have the manual PDF but I don't remember seeing the battery case
schematic.

Here's a site that has info on both of those... plus others. And SOME manuals:
http://www.valcoelectronics.com/scanner/bc60xlt-1.htm - links to other models are at the bottom of each page.

Looks like the cover that lifts off holds two of the AA, ans the section below it holds the other two. I hadn't heard of a problem with it though, other than the one guy you mention.

The manual is a bit under 3 MB - ok if you have a fast connection, but will be kinda slow if you're on dial-up.

Most EMS stuff is on the 10 "Med" Channels between 462.95 and 463.175 (if they don't use repeaters, the mobiles are often on the corresponding "input" freqs at 467.95 to 468.175.) They may use freqs in the 154/155 Mhz freqs for dispatching, too, but you may have all that already.

sorry mate it is not your holiday

Yuletide is a lot older than what we call Christmas,but both those who want
to celebrate christmas and those who want to celebrate Yuletide or indeed
those who dont want to celebrate for any reason,lets think fo peace and
goodwill.

and hopefully not war as your Mad warmongering president wants

as one of the UKs newsapapers said the other day,Bush is the most dangerous
world leader.

regards

Every Christmas there are usually a lot of new scanner owners who show up on the news and email groups, asking what may seem "stupid" questions, or stuff that's been asked and answered a million times.

Don't forget to be patient with them - in the holiday spirit - and remember that ALL OF US were newbies once upon a time.

Sometimes it might be preferable, if someone goes on and on, to have them email you directly rather than tie up the list (and get "flames" from other, less-patient, people).

Happy Holidays, all!

Harry Marnell
http://www.snowcrest.net/marnells/digital-scanner.htm <~~ (well, they ALMOST made it in time for Christmas)

the manual's "Page 7" has a fairly crummy view, but that's what it looks like. I sold some 60XLTs when I worked at a scanner store, but only used one occasionally to demonstrate it. Being a relatively low-end (and cost-effective) model, it CAN'T be too hard!

Check my post. I said "to become bilingual." Some people have an ability to pick up a language after the pre-adolescence period and to speak it competently, but they will always be translating form their native tongue in most cases.

Nearly all people who learn a language in adolescence or adulthood do not learn to speak truly fluently. They may be able to conduct a conversation, but they are not at ease in the language ever. Most don't even achieve that level of proficiency due to the amount of time it takes, the degree of concentration required and the variances in individual skills.

The average immigrant comes to work, and has little time for formal study. Some pick up more of the language, others pick up very little.

We all know foreign born people who speak reasonable English because, and this is key, those are generally the only foreign born we are going to have contact with if we don't speak their language. So we see the exceptions, not the rule.

I once spoke to a business owner in Chapala, a retirement area in Mexico where well over 100,000 US retirees live. He insisted he had never found a single retiree who was even close to fluent in Spanish despite many of them having been in Mexico a decade or more.

Absolutely. Nobody minds them celebrating at the same time but it
would be nice if they'd stop their religious preaching. Get thee
gone, foul preachers.

Which makes matters even worse.
So one ita goes out to find some land against the wishes
of the catholic church, for a foreign country.

Where is this world going for ?

Ed

Isaiah 36:12
Hath he not sent me to the men that
sit upon the wall, that they may eat their own dung, and drink their
own piss with you?

Malachi 2:3
Behold, I will corrupt your seed, and spread dung upon your faces!

And thou shalt eat it as barely cakes, and thou shalt bake it
with dung that cometh out of man..." - Ezekiel 4:12

"Lo, I have given thee cow's dung for man's dung and thou
shalt prepare thy bread therewith" - Ezekiel 4:15

JOB 41:19.....
Out of this mouth go burning lamps, and sparks of fire leap out. Out of
his nostrils goeth smoke, as out of a seething pot of caldron. His
breath kindleth coals, and a flame goeth out of his mouth.

Isaiah 34:7
And the unicorns shall come down with them, and the bullocks with the
bulls; and their land shall be soaked with blood, and their dust made fat
with fatness.

Revelation 12:3 "...and behold a GREAT RED DRAGON, having SEVEN HEADS
and ten horns, and seven crowns upon his heads."

"If any one comes to me and does not hate his own father and mother and
wife and children and brothers and sisters, yes, and even his own life,
he cannot be my disciple." - Luke 14:26
(Jesus)

If god can prevent evil, but doesn't, then He isn't all-loving.
If god intends to prevent evil, but cannot, then He isn't omnipotent.
If god both intends to prevent evil and is capable of doing so, then how
can
evil exist?

> "JESUS is the REASON for the SEASON!"

Only for people who are into Christian Mythology. MOST people celebrate Christmas for Santa, gift giving, decorating pine trees and all that non-religious stuff that makes the holidays fun.

Jesus would actually be against the gifts and all the fun stuff that makes the holidays what they are. After all, anything that is fun or makes one feel good is a sin. FUCK THAT!!

MERRY FUCKING CHRISTMAS!!!! Don't let religion spoil your holidays!

>
> Yuletide is what it really is and has nothing to do with the birth of
> christ,which i have no problem with,but just wish religion would not hijack
> ancient pagan festivals.

Look, there is nothing religious or Christian about Santa Claus, decorating pine trees with electric lights, and giving gifts wrapped in colorful wrapping paper. Stop brining religion into something nice and fun and ruin it!

> i am not doubting the birth of Jesus but on December 25 th i dont think so.

Jesus is a make-believe character of Christian Mythology. At least Santa rewards with gifts and his worst punishment is a lump of coal in your stocking. Jesus gives no gifts, just threats of eternal punishments and burning in hell for doing anything that is fun or brings happiness. (sins)

Rv:12:7: And there was war in heaven: Michael and his angels fought
against the dragon; and the dragon fought and his angels,

Rv:20:2: And he laid hold on the dragon, that old serpent, which
is the Devil, and Satan, and bound him a thousand years,

Rv:20:10: And the devil that deceived them was cast into the
lake of fire and brimstone, where the beast and the false prophet
are, and shall be tormented day and night for ever and ever.

Rv:20:15: And whosoever was not found written in the book
of life was cast into the lake of fire.

> > but christmas and easter were both stolen by the christians
>
> Really, what do trees and presents and easter eggs have to do with Jesus?

Thank you! At least somebody here has their thinking cap on. Christmas is all about Santa, decorating pine trees, and giving presents to friends and family. Without Christmas, many businesses would fail and go bankrupt. Why people have to always push religion into everything is unbelievable. It has gone to the point that Jewish people won't even let their kids celebrate Christmas and see Santa!! As if Santa Claus and present giving is exclusive to the Christian religion or something! I'm an Atheist and celebrate Christmas every year with my family, why the hell can't Jews and Blacks? What the hell is this new black holiday (Qwanza?) the Blacks have to have to further keep themselves separate and segregated instead of joining in and trying to unite into one big melting pot, instead of trying to invent new ways to separate into smaller groups.

Christmas is for EVERYONE! Even Jews like Jack Benny, George Burns (Nat Birnbaum) and Stan Freberg would have Christmas shows and celebrate Christmas!

Religion once again is trying to rip people apart instead of bringing everyone together.

I for one, am not playing part of this new "politically correct" bullshit of having to say "happy holidays" instead of "Merry Christmas". Santa Claus says: "Merry Christmas" and so do I! I hate Christians and religion like everyone else, but that has nothing to do with our Christmas holiday, Santa, decorating pine trees, giving gifts, etc.

I think as soon as everyone else realizes this, we can all join into one big happy group and celebrate the season together, instead of hiding into our little separate groups and sub-holidays.

Celebrate Christmas or DIE!!!

Hi all, I have just uploaded my latest Project - Pcr1k Mini to my homepage. It's a mini version
that supports all functions from the PCR-1000 - Except EEprom Reading/Writing...

I have also included the Source Code :) that uses my Pcr1kComm.Ocx which brings all known functions that are available, including some that are not. The Mini program shows how to use it...

Install Program & Source can be found at:
http://104452.home.icq.com/pcr1kmini.html

Merry X-Mas :-)
Jay

Hey Bob, you wouldn't happen to be working on a control program for this scanner, would ya? ;) I use your TK2, 75, and 92 and think they are fantastic! I wish I had your programming expertise. Last time I programmed anything was on the VIC-20, in basic.
Hope you had a wonderful Christmas and a Happy New Year!

That point is obvious! You really do hate Christians and religion don't you?

>but that has nothing to do with our Christmas holiday, Santa,
> decorating pine trees, giving gifts, etc.

Remember the name? CHRISTmas not SANTAmas.

>
> I think as soon as everyone else realizes this, we can all join into one
big
> happy group and celebrate the season together, instead of hiding into our
> little separate groups and sub-holidays.

Christmas with no Christ in it, no thanks I believe
I'll pass on your anti-religious version of the holiday.

>
> Celebrate Christmas or DIE!!!
>

Then let it be death! Would you like to be the one to do me in?
I do want to warn you, I'm not like those meek and mild milk
toast church going types you know. I will fight back so bring your lunch.

Or if you just want to say "no it's not that important to me", then
that's OK too. I'm not going to start any holy wars, but if one
starts on me I'll darn sure finish it!

Just so we understand each other my statement above was
made because of your "Celebrate Christmas or DIE!!!" comment.
I'm not starting any fights, nor do I have a desire to do so either.

This really is basic stuff. You do know don't you that originally it
was a non christian festival and the christians came along and took it
for their own? Even the church accepts this so if you don't, then
you're on your own.

Yes I do know all that. It was done because the church
wanted the pagens to stop celebrating their pagen holidays.
They found out that they couldn't stop it so they decided
to adopt the holidays and give them a Christian meaning
so the pagens who converted to Christianity would not
have to stop celebrating 'their' holidays.

The point is NOW it is a Christian holiday and I celebrate it as such.
If you want to celebrate the pagen aspects of this day 'go for it' it
is after all a free country (at least here) to do as you wish with it.
We have Jehovah's Witnesses here that don't celebrate ANY
holidays and we're OK with that too. The Amish here do their
Christmas without any electric lights or anything, that's OK too.

If you want to celebrate the holiday in the pagen way that's fine.
Just don't call it Christmas, it wasn't called that before the
church took it over. Why use a Christian name for a pagen
holiday if you don't believe in God.

Without Jesus there is NO reason to celebrate anything at all!
No Jesus = No God Know Jesus = Know God
It really is that simple.

And the Christian version of the holiday was here
before I was born, sorry. It don't matter to me
how it got here, what matters is what it means
to me now.

I believe in God, I'm sorry you don't. I just want
to know, why you call it CHRISTmas if you
celebrate it in it's pagan form? Why not call it
SANTAmas or YULEmas or Xmas or
WHAT-EVERmas? I think the name Christmas
should reflect the Christian traditions of the
holiday, thats all I'm saying.

Was Jesus actually born today?
By Joseph Farah

Posted: December 25, 2002
1:00 a.m. Eastern

Editor's note: Advance orders for Joseph Farah's long-awaited "Taking America Back" are now being accepted exclusively at WorldNetDaily. The book won't be released in bookstores and at Amazon until February. Get your copy even before the critics.

Today, millions of Christians around the world celebrate the birth of the One they believe to be the Savior of the world, the Prince of Peace, the Son of God &#65533; Jesus of Nazareth.

Jesus is called many things in the Bible. One of His names is the Lamb of God. And while no one is quite sure exactly when Jesus was born, I believe that name may actually lend credence to the birth date of Dec. 25.

I know what you skeptics are going to say. Dec. 25 was chosen by church leaders because it coincided with pagan festivities. It was a way of hijacking those customs and traditions &#65533; a way of redeeming them.

But hear me out. I'm going to tell you why Dec. 25 could well be the actual birthday of the Messiah. First, let's review the most descriptive and familiar of the Christmas stories from the Bible.

There was in the days of Herod, the king of Judea, a certain priest named Zacharias, of the course of Abia: and his wife was of the daughters of Aaron, and her name was Elisabeth.

And they were both righteous before God, walking in all the commandments and ordinances of the Lord blameless. And they had no child, because that Elisabeth was barren, and they both were now well stricken in years.

And it came to pass, that while he executed the priest's office before God in the order of his course, According to the custom of the priest's office, his lot was to burn incense when he went into the temple of the Lord.

And the whole multitude of the people were praying without at the time of incense. And there appeared unto him an angel of the Lord standing on the right side of the altar of incense.

And when Zacharias saw him, he was troubled, and fear fell upon him. But the angel said unto him, Fear not, Zacharias: for thy prayer is heard; and thy wife Elisabeth shall bear thee a son, and thou shalt call his name John.

-- Luke 1:5-13 KJV

The story continues, with Zacharias remaining in the temple and fulfilling his duties as priest. Only after "the days of his ministration were accomplished" did Zacharias return home, where his wife, Elisabeth, conceived, "and hid herself five months."

And in the sixth month the angel Gabriel was sent from God unto a city of Galilee, named Nazareth, To a virgin espoused to a man whose name was Joseph, of the house of David; and the virgin's name was Mary. And the angel came in unto her, and said, Hail, thou that art highly favoured, the Lord is with thee: blessed art thou among women.

And when she saw him, she was troubled at his saying, and cast in her mind what manner of salutation this should be.

And the angel said unto her, Fear not, Mary: for thou hast found favour with God. And, behold, thou shalt conceive in thy womb, and bring forth a son, and shalt call his name JESUS. He shall be great, and shall be called the Son of the Highest: and the Lord God shall give unto him the throne of his father David: And he shall reign over the house of Jacob for ever; and of his kingdom there shall be no end.

Then said Mary unto the angel, How shall this be, seeing I know not a man?

And the angel answered and said unto her, The Holy Ghost shall come upon thee, and the power of the Highest shall overshadow thee: therefore also that holy thing which shall be born of thee shall be called the Son of God. And, behold, thy cousin Elisabeth, she hath also conceived a son in her old age: and this is the sixth month with her, who was called barren. For with God nothing shall be impossible.

And Mary said, Behold the handmaid of the Lord; be it unto me according to thy word. And the angel departed from her. And Mary arose in those days, and went into the hill country with haste, into a city of Judah; And entered into the house of Zacharias, and saluted Elisabeth.

And it came to pass, that, when Elisabeth heard the salutation of Mary, the babe leaped in her womb; and Elisabeth was filled with the Holy Ghost: And she spake out with a loud voice, and said, Blessed art thou among women, and blessed is the fruit of thy womb. And whence is this to me, that the mother of my Lord should come to me? For, lo, as soon as the voice of thy salutation sounded in mine ears, the babe leaped in my womb for joy.

-- Luke 1:26-44

Notice the details pointing to the approximate time when Jesus was conceived and born.

"What are you talking about, Farah?" you're probably asking yourself.

We've learned that Zacharias was a priest of the course of Abia and that he fulfilled his duties before going home and impregnating his wife. In I Chronicles 24:1-10, we learn that the priestly duties were established about 1,000 years earlier. They included 24 courses and were numbered by drawing lots 12 courses for sanctuary service and 12 for the government of the house of God.

Priests would serve during a month starting with the Hebrew months of Nisan, which can begin anytime between early March and early April. The sons of Abija, the Old Testament spelling for Abia, were in the eighth course, which would mean Zacharias would likely have ministered during the eighth month of the Hebrew calendar, starting as early as the fifth day of our month of October. That would place the likely time of John the Baptist's conception toward the end of October.

Elisabeth then hid herself for five months. Sometime, perhaps, around March 15-April 15, the angel appeared to Mary. For the sake of argument, let's say this happened on or about April 1. A normal gestation period of 270 days would have resulted in the birth of Jesus on or about Dec. 25.

That is a very plausible scenario. Still not convinced? How about this?

Let's go back to Luke, Chapter 2, verse 8: "And there were in the same country shepherds abiding in the field, keeping watch over their flock by night."

Shepherds spent the night in the fields with their sheep when the lambs are born. The mating cycle begins after June 21. The normal gestation period is five months, so the ewes start giving birth in mid-December.

And that's where "the Lamb of God" comes into the picture. Jesus was likened to a lamb who was brought into this world to be slaughtered for our sins. Wouldn't it make sense that He was born around the same time that the innocent little lambs were being born in the fields nearby?

The more I read the Bible, the more I am stunned by such little "coincidences." The Bible is full of them. It makes perfect sense to me. I hope you agree.

Yet, it doesn't really matter exactly when Jesus was born. The important thing today, as we Christians prepare to celebrate that birth, is that He was born that He did come, that He later laid down His life for us and that He will come again.

Merry Christmas to all of you, dear readers. May the joy of His coming be with you today, tomorrow and for all eternity.

 2002

The word is spelt 'pagan' and it doesn't matter to us what the day is
called. Our government has chosen to call it the Christmas break and
that's what we go with. To insist on using some different name would
be childish.....and only the Christians are childish......

> Thanks in advance to all........

I live in Daytona Beach and believe Deland is part of the Volusia County trunk system (same as Daytona Beach City). I just plugged in the Deland Talkgroups but all is quit. If I can find activity I'll setup a live link from www.MilAirComms.com

Volusia County has three trunk systems, two which are split between different departments and the third just for special events. Its possible Deland is on the oppsite system from Daytona Beach (Daytona Beach being the only system I have programmed in).

If there is something special you're listening for in Deland let me know and I'll keep a watch for it. However there just isn't that much activity in Deland....

lol. if you see people nowadays. it is for gifts. have to be expensive. no one seems to enjoy just getting a gift of anything. it seems to always have to be expensive or somethin. Look at these stores. they thrive on the customers for christmas. It seems to have lost its whole meaning of christmas. Ya I will not be santa anymore after tonight. I will be back to dev. but still.

I noticed the 'spelling' after I posted it. Just like locking your keys
in your car you see them hanging there just after you have pushed
the door to close it, but always before it shuts. Always 'just' out
of your reach.

I for one on the holiday name game choose to call easter
Resurrection Day because easter (small e) is a pagan
(notice the spelling :) holiday. And yes I do mention that
to fellow Christians BTW. This isn't just one sided against
pagans, I tell it like I see it to the Christian community as well.

Ann you said ".....and only the Christians are childish......"

That is the pot calling the kettle black, we 'as in' the
human race are ALL childish at one time or another.

OK I'll say this I don't believe Jesus was born on December 25, 0000.
They say it was more like in the spring of 4BC, but Dec 25 is when
the world celebrates the day. So who am I to say we can't celebrate it
then because we can't find his "birth certificate" for proof?

The bottom line is I believe Jesus was born, that's the important part
not which day it happened on.

totally fair points,i try to call it Yuletide,but the fact is virtually
everything is geared up towards Christmas.

celebrate how you want,definately,the main thing for me,for any time of the
year is "peace and goodwill" and at Christmas or Yuletide,it is a time to
think of these and not get hung up on your only good if you are a christian.

regards

Indeed....I should have said that only the Christians appear to be
childish in this respect....for the rest of us don't give a shit...

Ann

6941. Make $ Now - It really works!!!

Newsgroup: rec.radio.scanner
Date: 2002-12-26 02:37:50 UTC
From: norahsj2@aol.com
Message-ID: <20021225213750.10455.00000196@mb-cb.aol.com>
Source record: 39582

Easy Money

TURN $6.00 into $60,000...READ THIS TO FIND OUT HOW!!!
READING THIS COULD CHANGE YOUR LIFE!!!
SERIOUSLY TAKE TWO MINUTES TO READ THE WHOLE
THING!!! I found this on a bulletin board like this one and
decided to try it. A little while back, I was browsing through
a newsgroups, just like you are now, and came across an
article similar to this that said you could make thousands
of dollars within weeks with only an initial investment
of $6.00! So I thought, "Yeah right, this must be a scam", but
like most of us, I was curious, so I kept reading. Anyway,
it said that you need to send $1.00 to each of the 6 names
and address stated in the article. You then place your own
name and address in the bottom of the list at #6, and post
the article in at least 200 newsgroups. (There are millions)
No catch, that was it. So after thinking it over, and talking to a
few people first, I thought about trying it. I figured: "what have
I got to lose except 6 stamps and $6.00, right?" Then I invested
the measly $6.00. Well GUESS WHAT!!... within 7 days, I started
getting money in the mail! I was shocked! I figured it would
end soon, but the money just kept coming in. In my first week,
I made about $25.00. By the end of the second week I had made
a total of over $1,000.00! In the third week I had over $10,000.00
and it's still growing. This is now my fourth week and I have made
just over $42,000.00 and it's still coming in rapidly. It's certainly
worth $6.00, and 6 stamps, I have spent more than that on the
lottery!!
Let me tell you how this works and most importantly, why it works....
Also, make sure you print a copy of this article NOW, so you can get
the information off of it as you need it. I promise you that if you
follow the
directions exactly, that you will start making more money than
you thought possible by doing something so easy!

Suggestion:
Read this entire message carefully! (print it out or download it.)
Follow
the simple directions and watch the money come in! It's easy. It's
legal.
And, your investment is only $6.00 (Plus postage)
IMPORTANT:
This is not a rip-off; it is not indecent; it is not illegal; and it
is virtually no
risk - it really works!!!! If all of the following instructions are

adhered
to, you will receive extraordinary dividends.

PLEASE NOTE:
Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by
carefully adhering to the instructions.
You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.

Here are the 4 easy steps to success:
STEP 1:
Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now
get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the phrase "PLEASE PUT ME ON YOUR
MAILING LIST.", your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL!
You are requesting a legitimate service and you are paying for it! Like
most of us I was a little skeptical and a little worried about the legal
aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161)
and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:

#1 Nicholas Caiella : Lafayette College Farinon Center Box 7076 : Easton, PA 18042
#2) C. Diamond: PO BOX 14645: Newport News Va. 23608-0013
#3) Oren Rose Jr: P.O.Box 24: Manassas, Va 20108
#4) Steven Wright : P.O. Box 814: Channelview, Tx 77530
#5) J. Barrett : 66649 CR 3: Wakarusa, Indiana 45673
#6) S. Boettner: 77 Jackson Rd., Medford, NJ 08055

STEP 2: Now take the #1 name off the list that you see above, move the
other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR
Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 2.4million groups)

All you need is 200, but remember, the more you post, the more
money you make! This is perfectly legal! If you have any doubts,
refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws.
Keep a copy of these steps for yourself and, whenever you need
money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful
because of the honesty and integrity of the participants and by
their carefully adhering to the directions. Look at it this way.
If you are of integrity, the program will continue and the money
that so many others have received will come your way.

NOTE:
You may want to retain every name and address sent to you,either
on a computer or hard copy and keep the notes people send you.
This VERIFIES that you are truly providing a service. (Also, it
might be a good idea to wrap the $1 bill in dark paper to reduce
the risk of mail theft.) So, as each post is downloaded and the
directions carefully followed, six members will be reimbursed
for their participation as a List Developer with one dollar each.
Your name will move up the list geometrically so that when your
name reaches the #1 position you will be receiving thousands of
dollars in CASH!!! What an opportunity for only $6.00 ($1.00
for each of the first six people listed above) Send it now, add
your own name to the list and you're in business!

DIRECTIONS : FOR HOW TO POST TO NEWSGROUPS

Step 1)
You do not need to re-type this entire letter to do your own
posting. Simply put your cursor at the beginning of this letter
and drag your cursor to the bottom of this document, and select
'copy' from the edit menu. This will copy the entire letter into the
computer's memory.

Step 2)
Open a blank 'notepad' file and place your cursor at the top of the
blank page. From the 'edit' menu select 'paste'. This will paste a
copy of the letter into notepad so that you can add your name to the
list.

Step 3) Save your new notepad file as a .txt file. If you want to do
your postings in different settings, you'll always have this file to
go back to.

Step 4)
Use Netscape or Internet explorer and try searching for various
newsgroups (on-line forums, message boards, chat sites, discussions.)

Step 5)
Visit these message boards and post this article as a new message
by highlighting the text of this letter and selecting paste from the
edit menu. Fill in the Subject, this will be the header that everyone

sees as they scroll through the list of postings in a particular
group,
click the post message button. You're done with your first one!

Congratulations...THAT'S IT!
All you have to do is jump to different newsgroups and post away,
after you get the hang of it, it will take about 30 seconds for each
newsgroup!

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN,
THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE
TO POST A MINIMUM OF 200**
That's it! You will begin receiving money from around the world
within days! You may eventually want to rent a P.O.Box due to
the large amount of mail you will receive. If you wish to stay
anonymous, you can invent a name to use, as long as the
postman will deliver it. **JUST MAKE SURE ALL THE
ADDRESSES ARE CORRECT.**

Now the WHY part:
Out of 200 postings, say I receive only 5 replies (a very low
example).
So then I made $5.00 with my name at #6 on the letter. Now, each of
the
5 persons who just sent me $1.00 make the MINIMUM 200 postings,
each with my name at #5 and only 5 persons respond to each
of the original 5, that is another $25.00 for me, now those 25
each make 200 MINIMUM posts with my name at #4 and
only 5 replies each, I will bring in an additional $125.00!
Now, those 125 persons turn around and post the MINIMUM
200 with my name at #3 and only receive 5 replies each, I
will make an additional $626.00! OK, now here is the fun part,
each of those 625 persons post a MINIMUM 200 letters with
my name at #2 and they each only receive 5 replies, that just
made me $3,125.00!!!
Those 3,125 persons will all deliver this message to 200
newsgroups with my name at #1 and if still ONLY 5 persons
per 200 newsgroups react I will receive $15,625,00!
With an original investment of only $6.00! AMAZING!
When your name is no longer on the list, you just take the
latest posting in the newsgroups, and send out another $6.00
to names on the list, putting your name at number 6 again. And
start posting again.
The thing to remember is: do you realize that thousands of people
all over the world are joining the internet and reading these
articles everyday?, JUST LIKE YOU are now!! So, can you
afford $6.00 and see if it really works?? I think so... People
have said, "what if the plan is played out and no one sends you
the money? So what! What are the chances of that happening when
there are tons of new honest users and new honest people who are
joining the internet and newsgroups everyday and are willing to give

it a try? Estimates are at 20,000 to 50,000 new users, every day,
with thousands of those joining the actual internet.
Remember, play FAIRLY and HONESTLY and this will really work.

6945. Re: CHP received in ARKANSAS???

Newsgroup: rec.radio.scanner
Date: 2002-12-26 04:13:05 UTC
From: Harry <marnells@cox.net>
Message-ID: <IlvO9.161524$6k.3149412@news1.west.cox.net>
Source record: 39585
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Actually, I threw in that "mobile relay" thing intentionally. They don't use "repeaters" for the dispatchers' transmissions; but they are beginning to use mountain-top "relays" to relay the mobiles' messages TO the dispatchers (and other mobiles). Dispatcher-to-transmitter links use wireline, microwave, or, in a few instances, VHF or UHF links (such as in the 72-74 MHz range).

They've been stuck on 42 MHz for 40-50 years, and only got the 39 MHz frequencies about ten or 15 years ago, when LA Sheriff's Dept gave them up when switching to UHF. Of course, as you say, 39 & 42 MHz works much better for covering the thousands of square miles the CHP patrols. The eventual "plan" is to probably relocate CHP to 700 Mhz later this decade, after the UHF-TV channels get moved out. But they're gonna need a WHOLE lot more transmitter/receiver/repeater sites to get the kind of coverage on 700 MHz that they enjoy now on low band.

If anyone' interested, there's an interesting site about CHPs radios at Geoff Fors' http://www.mbay.net/~wb6nvh/chpradio.htm

Some of us, however, have matured and no longer believe in the sandman, tooth fairy, Santa, Easter Bunny, the boogeyman, and the delusion that there's a god who keeps his eye on every single sparrow. The Hubble telescope hasn't spotted Heaven anywhere, unless it's a black hole.

Naturally, I agree with Ann. And I'm surprised someone like yourself technically-minded enough to earn a ham callsign can believe Ohm's Law, which can be tested and proven, but STILL believe some supernatural god personally handed Moses the Ten Commandments. Or perhaps you pray for DX? :^)

I have a Radio Shack Pro-51 that I turned on tonight for the first time in over
a year. Of course, I put in brand new batteries.
Nothing. No power at all.
I put in 4 more new batteries.
Still nothing.
Any ideas? Is there a quick, easy fix or is it time to take it in for repair?
Thanks.

Tommy (WTF24@aol.com)

Mate

Believing quotes from the Bible contains about as much truth as an Enron balance sheet is. Both are fabrications to give the plebs something to believe it.

Gee, if its not a Christian holiday then why do we call it Christmas. Did you ever think that the word Christ might be an important facet of Christmas. Why don't we call it Santa Claus Day or Satan Clause Day or whatever.

Let's see if no one respects Bush, then why did a large percentage of Americans vote for him in the last election. Or is it that you are trying to put thoughts in peoples minds again. Not sure what your claim to fame may be but certainly in this world it is isn't President, CEO or much of anything else.

Very well put. Only a fool would refuse the power of God. I find it that Christianity contributed to the widespread improvements and has foretold the current degradation of Western Society. No other religion or nation under those forms of religion has contributed much of anything to the betterment or technological progress seen by the Western nations such as U.S.A., U.K, Germany, France, and many others. It sure hasn't appeared to me that much progress has really been made in the so called Third World states with their religions of Islam, Buddhism, etc.

> What's wrong with that, everyone likes a bargain.

True, everyone likes a bargin, but aside from being an IT systems guy, I
also buy (I do everything and just say "yes" to the
person I report to who writes the check, when my checking and double
checking is completed within budget and writing out the check is the only
thing I don't do in purchasing), and have watched the computer commodity
market for years. Bargins are not nessesarily the best thing unless you know
exactly what the product is, and how it compares to the average market. Like
everything else, there's cheap, and there is excessively expensive.

Good to bag a bargin if you see one, but never ever buy cheap...

..but buying the most expensive item isn't always the best either unless it
has exactly what you're looking for.

There's also alot to be said for those $5.00 off the price of a product as
well. That $5.00 reduction in the sticker price will
almost always be eaten up by sales taxes.

Buy myself a BC780XLT now, or wait until the middle of Juanaury when the
BC785D comes out, and that will push the price of the BC780XLT down a bit?
Decisions, decisions... 8-)

PK

(Can't buy a BC785D. They're not allowed into Canada without a licence, so
my government essentially says: "you can't have one if you're not employed
in emergency radio services".) Damb!

Another comment. I guess if Christianity didn't exist, then we would live in a much better and more moral world. Or would that be a world ruled by savages, evil, and other degeneracy? It seems to me that the world is moving toward the real of the latter especially when evil exists. Of course, all of these Atheists, Humanists, Socialists, and other individuals think that we would be so much better off without Christianity. As John Adams said about even our Constitution, "We have no government armed with power capable of contending with human passions unbridled by morality and religion . ... Our Constitution was made only for a moral and religious people. It is wholly inadequate to the government of any other

Now tell us, humanists, what part of this don't you understand

6959. ICOM R-7000 Sensiticity

Newsgroup: rec.radio.scanner

Sensitivity

I have an Icom R07000 receiver that is a great radio, except that is a bit on the death side. I have heard that the receiver can be modified to significantly improve it's sensitivity. Does anyone have any information on the modifications they would care to share with me? Yes I know the R-7000 is a bit old, but I like it.

I have had three at my house, checking them for friends that bought them used, and one of them was really deaf, the others weren't great, but weren't all that bad. It was mostly alignment in all three, but the really deaf one had bad solder joints that turned out to be the main cause of it. They were pretty obvious when I started looking around inside.

As old as these are, they really could use a little screwdriver work by someone who knows what they are doing and has the counters and stuff you need. My friends radios went off to Icom and came back working great.

I don't remember what they charged for the alignment, it was a while ago.

No problem with the batteries - you open the clamshell battery door and 2 are within the body, while 2 are in the clamshell. Just pull 'em out and change 'em. It's a pretty sensitive radio - my mother in law wanted a scanner after hearing the police calls and such on a visit to my house and bought this one. I was able to pick up UHF PD 40 miles away indoors with just the duckie.

You didn't state (or I missed the original post) if you were buying it new or used. The last time I looked Uniden was selling it 'refurbished' for $48, and I recall some folks posting that they had bought refurbished products from Uniden and they were just like new, and with a warranty as well.

AND - if you're getting an older one I have a mod to make it 80 channels which I did to my mother in law's. Subsequently I heard that Uniden may have changed something along the way that rendered the mod ineffective, but I don't know exactly when or which date codes would indicate a unit that can or can't be modded.

I don't call myself a humanist but I understand you very well.

I love the way you talk of Socialism being non christian...doesn't
work that way in the UK. Here, socialism is a political ideology
which has nothing to do with religion. We can keep the two separate
which doesn't seem to be the case for you. Interesting.

Were the old batteries left in the scanner during the time it was in storage? If so, it's possible the batteries may have leaked a little and and oxidized the battery contacts. Visually inspect them, and you can try using a pencil tip eraser to remove the oxidation. If the batteries leaked a great deal, I would try using a small finger nail file to scrape off the corrosion, taking care to keep any particles from dropping into the scanner from the battery compartment.

Hope this helps. Let me know if you need any further help.

The only stupid question is the one that is not asked. Like Harry said we ALL were new to scanning and had all kinds of questions, I am more than happy to share my 29 years of monitoring with anyone. Let's all give these folks a hand and help them enjoy this hobby as much as we do.

Dave

> whatever.

How about winter solstice celebrations, winter festival,
Brumalia or Saturnalia?

For the first three centuries of Christianity, Christmas
wasn't in Decemberï¿½or on the calendar anywhere. If observed
at all, the celebration of Christ's birth was usually lumped
in with Epiphany (January 6), one of the church's earliest
established feasts. Epiphany, January 6, still marks the
date of Christ's baptism in eastern churchs but in western
churches now marks the arrival date of the Magi. Few eastern
churches continue to celebrate Christ's birth on January 6.

In 336 A.D., Pope Julius declared Christmas on December 25,
after Emperor Constantine had declared Christianity the
empire's favored religion. Writing in 390 A.D., Pope Julius
says: 'On this day also the birth of Christ was lately fixed
at Rome, in order that while the heathen were busy with
their ceremonies, the Christians might perform their rites
undisturbed."

The heathen ceremonies referred to were the Roman festival
of Saturnalia and Brumalia.

Saturnalia

Saturnalia (feast of Saturn), was both a gigantic fair and a
festival of the home. Riotous merry-making took place, and
the halls of houses were decked with boughs of laurel and
evergreen trees. Lamps were kept burning to ward off the
spirits of darkness. Schools were closed, the army rested,
and no criminals were executed. Friends visited one another,
bringing good-luck gifts of fruit, cakes, candles, dolls,
jewellery, and incense. Temples were decorated with
evergreens symbolizing life's continuity, and processions of
people with masked or blackened faces and fantastic hats
danced through the streets.

Roman masters feasted with slaves, who were given the
freedom to do and say what they liked. A Mock King was

appointed to take charge of the revels.

The week-long festival of Saturnalia was immediately
followed by Brumalia.

Brumalia

This is the Roman celebration of the Winter Solstice. In
274 A.D., Emperor Aurelian established December 25 as the
birthday (Natalis) of the "Invincible Sun" (Solus Invicti).
The name comes from bruma and refers to the shortest day
of the year, the winter solstice. The Brumalia celebrated
the return of the sun after the winter solstice, the date
when the day began again to lengthen.

Why is it that Paul does not seem to know a thing about
Jesus' life and never quotes him despite many good
opportunities to do so are presented to him? In fact all of
the epistles are ignorant of the gospels and the Jesus in
them. Was the gospel story a late and fictional creation to
help people understand what the new religion was all about?

Greetings --

And no other religion has such a history of hypocrisy, willful ignorance, intolerance, repression, persecution, torture and organized murder. Have you forgotten such details as the Inquisition, the Catholic Church's tacit support of the Holocaust, the Black Plague (which killed more than a third of Europe's population, largely because the church taught that touching oneself to bathe was a sin)? Have you forgotten the early scientists (Galileo, Copernicus, for example) tried, tortured, or otherwise pressured until they recanted the truth in favor of the church's view? Why else do you think that christians selected the cross, an instrument of torture and execution, as their primary idol/icon?

Organized religion (not just christianity, btw) has always been a tool of a society's power structure to keep the masses down, either via repression or by promising "rewards" in some fictional next life.

> hammers, that it move not.

Which, although a biblical quote, really has nothing to do with December the 25th.

And to answer the naysaying atheists, yes, the catholic church did decide, rather arbitrarily, to celebrate Jesus' birthday on a day that historians have since concluded unanimously was NOT his birthday!

But I ask them all this: If He is just some made up fairy tale than what is the holiday for? Is it just an excuse to let the bills slide for a month so you can buy a bunch of crap you somehow lived without all year long? Or is it just a good reason to skip work and sleep in? If that's all it is to you, that's OK. It's kinda sad, but if that's what blows your hair back...

For me, it's the one time of year when I can take a break from the daily grind and the holiday madness to thank Him for the eternal gift he gave me and anyone else who chooses to accept it.

And no I'm not preaching here. Whether you choose to believe in Jesus, Santa Claus, the Easter Bunny or nothing at all, that's none of my business. My point is simply that to me, it wouldn't matter what day Christmas happened to be - the meaning is the same. Your mileage however, may vary.

Pagans do not celebrate christmas. Our Holiday falls on Dec.21
It is celebrated as the return of the light and birth of God from
the Goddess.

> Without Jesus there is NO reason to celebrate anything at all!
> No Jesus = No God Know Jesus = Know God
> It really is that simple.

Please cut me a break, I respect all religions. Next thing you know
I'll be told that if I dont believe like you I'll be going to hell.
Hint - How can I go to a place that I don't believe in.

You may be interested in our scanner antenna at:
http://www.universal-radio.com/catalog/scanants/4464.html

Optimized for VHF-HI, UHF and 800-90 MHz.

About the best omni-directional scanner antenna I've found is the ScanTenna sold by AntennaWarehouse.com. Here is the actual page for the antenna: http://users.cis.net/kingpop/Scantenna.htm

$37.00 including coax. Does an excellent job in all the normal scanner bands and even the not so normal as I do must of my listening in the 225-400 MilAir range.

Is anyone out there using the Radio Shack 20-176 antenna?
I have purchased one but have heard a couple of reports that it's no better
at 30' than the rubber duckie mounted on the scanner.
Please give me your impressions good or bad.
If you recommend a better antenna please let me know.

Thanks in advance, Mike

Hello,

I am looking for recommendations on a good all band base scanner antenna
that will be mounted on the roof.

The main bands I am wanting to scan are Police-Fire at 860Mhz, 460 Mhz and
155 Mhz.
I don't care about VHF lo because there are no signals there anymore.

Thanks in advance, Mike

There have been times when Chinese and Arabic cultures made Western
ones look barbaric, so it seems one can always find a time in history
to suit their particular biases, as you have done.

Also, if you're going to be stupid enough to let Christianity take
the credit for technological progress, then you can also let it take the
blame for the millions of deaths caused by Western countries (WW I and II)
and the technologies they created to facilite death on these scales.
And don't forget that the US (one of your "Christian" nations) is still
the only country to have used nuclear weapons against civilians.

So your argument implies that we should thank Jesus for nuclear weapons,
biological warfare capabilities, environmental destruction, and
rampant greed and consumerism since once you've associated your
western/christian societies with creating the benefits of technology,
you can't now separate them from their destructive consequences.

The bottom line for me, as an atheist, is that while I don't believe the
Jesus story, I most certainly believe that any Christian worth respecting
(and there are plenty) would be embarrassed by your nonsense.

Okay, I'll bite. Here goes... 8-)

After listening in on Los Angeles County Fire frequencies from a web sited scanner located in Los Angeles, I saw that it was a bit of a nip but sunny outside. It's Boxing Day, and grabbed my coat, toque I had left on the chesterfield and thinking I have a fortnight's worth of days off from the labour done at work, went outside. People were lined up for the specials at the shopping maul. As far as new electronic stuff, I was on the brink, but decided against it. Nothing on the telly today, and the Canucks weren't on the ice today either. People were lined up for the specials at the shopping maul, but figured what I want has to be ordered from across the

line and still miffed that I can't get a BC785D because the feds won't allow them across without a licence. Maybe have to talk with my solicitor about that one, but a tough go, that one. Will probbaly get a BC780XLT instead, maybe bomb down to Seattle to get one and bring it back. Who knows? Sure would like to listen in on the CPR and CN, plus YVR and public services. Sure beats following those pesky Liberals and their government policies..

Happy Boxing Day, and Happy New Year from a new newbie.
PK

What I find funniest of all is when the cops round up a bunch of gangbangers who all of a sudden forget they know english.

I remember shooting video of the end of a police pursuit and catching their "No Ingles" line on tape. I knew it was BS so I told the cop "watch this" and then made an off-color remark about their mother's intimate tendencies towards blowfish. In English.

"Hmmph." said I after witnessing the reaction, "looks like they understood that..." LOL - the cops thought it was the funniest damn thing they ever heard. Later I discovered that my shotgun mike picked it up too so the assignment editor at the station heard it while he was writing up the story. He said he nominated me for the "Brass Cajones" award....

Seasons Greetings,
I have a few scanners I am wanting to sell to make room!

PRO-2045
200 channel Base, fully loaded with features,
in like new condition,
$100 plus shipping

PRO-2032
200 channel base scanner
Can be modified for cellular
Very good condition 9.5 out of 10
$95 plus shipping

UNIDEN Bearcat BC-200XLT
200 channel hand held, full 800 Mhz coverage,cosmetically a 10!..battery
holds charge well, comes with antenna,charger,case
$100 plus shipping

UNIDEN Bearcat BC-9000XLT
500 Channel Base radio,loaded with features,like new with box and manual
$190 plus shipping

Radio Shack DX-160 Short wave radio
Excellent condition, with SP-150 speaker
$65 plus shipping

If intersted or if you have any questions please e-mail me at
gadgetgru@netscape.net
I will accept Pay-Pal or Postal Money Orders
Thanks

Message-ID: <xOIO9.164224$6k.3319295@news1.west.cox.net>
Source record: 39481

It just depends on the agencies you want to listen to. If they go to digital, you'll need one of the new scanners - plus the "APCO Card" - to listen to them. Most places are still analog, but eventually (I'd expect we're talking YEARS) most will probably go to digital. Large urban areas will likely move first, as that's where there's greater need for more frequencies. And so they can stay in touch with each other more readily, once a large agency makes the switch, their "neighbors" are more likely to follow.

I now live on the rural far north coast of California, almost everything here is still on VHF high-band repeaters, and everything is analog... NOTHING either digital or trunked. FedEx is the only active 800-band user, and they have just a single plain ol' repeater... no trunking, just one channel. Although I prefer my Uniden 2500XLT handheld, I still ocassionally use my 20-25 year-old Regency crystal scanner. The cities around here aren't likely to spend the bucks to go to trunking or digital any sooner than they have to. We'll essentially never NEED many more frequencies than we already have.

So, if you're "unlucky" enough to live in an area that's going digital, the existing scanners will become less and less useful; if not, you could be just fine for a long time. And you're already out of luck if you want to hear the local coppers in places like Orange County, CA, where they're not only 800-band, but also trunked AND digital AND encrypted. No scanners will work with them at all. Nor are they ever likely to, for both technical and legal reasons :-(

of course thirld world countries have not develeoped the US/UK and other western have kept them that way on purpose,god you cant be that stupid

gold/silver/diamonds/platinum/coffee/tea/fruits and all sorts of other comodities where the west have made there fortunes have all come from third world countries,there workers have suffered apartheid/slave conditions,bad health and safety so that some rich bitch can walk down Beverley Hills Boulevard looking pretty.

and you still wonder why several planes flew into buildings last year,dont you understand its your policies that started the whole thing,its war out there started by the US,a country that uses Nucleur weapons/Napalm,cluster bombs and all manner of evil weoponary and then of course thats ok,as long as Saddam Hussein does not hav the same.

> else.
>

OK I'll bite...

First off, arguments about the election outcome aside, since it
was about a fifty-fifty split, using your logic "a large percentage"
voted against him.

Secondly, those that voted for him are, quite frankly, strong evidence
that the educational system teaches very poor critical thinking
skills. They voted for a president:

who sabre rattles against Iraq even though the 9-11 attackers
were from Saudi Arabia

who reduces taxes while ramping up for war

who complains about weapons of mass destruction all the while
feeding the industries that produce them

who tries to get fellow americans to spy on each other

who claims he wants to get government off the backs of business
and has to wage war to distract people from business
corruption fiascos such as Enron

who picks a fight with a concept which is guaranteed to fail
as long as any terror cell survives

who, within a year, squandered world-wide support and empathy
for the US

And this is just the beginning of a longer list. As far as I can tell,
the "my president, right or wrong (except when he's a Democrat)" faction are
either extremely gullible, stupid, or morally bankrupt, or all of
these.

I'm shocked at how the American Flag, which
once stood for freedom and liberty, has been successfully co-opted
by those who would so readily embrace characteristics more appropriate

to a police state. When all is said and done, the current fanatics in power will spend a trillion dollars feeding the military and eroding freedoms rather than spend one cent on asking why the US is so despised by some countries.

no i would want the real people dealt with and with terrorism a normal war is not going to make any differance.

attacking Afghanistan and Iraq makes no differance on world terrorism,good intelligence is a much better weapon

if Saddam has any weapons technology that will leave Iraq,towards another country,i hope that all the billions spent on defencsive radar/sattelite technology etc will see it and then US/UK/NATO or whoever then shoots it down and then that will justify any incursion by those forces into Iraq.

So by letting Saddam alone but keep a close eye on anything leaving Iraqi airspace,something i doubt would happen anyway,we would then have justifyable reason to go in,but we have no reason as yet to go in.

Kuwait/Saudi/China and a load of other regimes,incluiding the new Afhgan regime,have governments as worse as Saddam or pretty damn near.

US have destablised many deomocracies in recent history,either directly or by CIA dirty tricks,so dont tell me they know about democracy in the US,recent history proves to the contrary.

why do people like you asume my thoughts would be differant if it happened in the UK,my principles and beliefs stay the same,if we do go to war,i will do whatever i can to demonstate my disgust,as i did during the Gulf war and Falkland Islands.

voting is not good enough if you are against the war,then block roads/businesses,refuse to pay taxes/go on strike/shout it out to govermnent officials/disrupot live television events.

In my last job before getting the sack,i sent emails to all our companies US customers registering my disgust at US government,i am in the process of setting up a global anti war campaign,based on peaceful but dirsuptive demonstrations.

nothing violent just,violence will make you as bad as Saddam/Bush/Blair,but dont this war happen on the current terms

peace for 2003

I cannot understand even a single sentence these guys are saying on CB. Everything is distorted, they seem to be SHOUTING into the microphone all the time, and they ALL sound like they're from Alabama (and I'm in NJ!).

I am listening on a Yaesu FT-840 with the wide AM filter installed, so I know that the audio quality should be decent. The signals are strong...I just can't understand a freakin' thing they say. Maybe I need to make some kind of adjustment to improve the audio?

Is it just me? How the hell do these guys communicate with each other? Maybe they're just talking and not listening.

I'm sure I'm not missing much, but as a ham I am interested in radio communication of all types and I'd like to understand why the audio quality is so poor on the CB band. It's got to be limited to that band...I pick up plenty of ham QSOs from all over the world with excellent clarity on this rig.

I was listening to the Voice of Russian on December 25, a day that may
or may not be of any signifigance. VOR referred to the day as
"Catholic Christmas."

....
> Saturnalia
> ----------
> Saturnalia (feast of Saturn), was both a gigantic fair and a
> festival of the home. Riotous merry-making took place, and

And many of those fruitcakes are still in circulation. Actually, I
like fruitcake a lot.

No doubt, angry Osirus worshipers will write back, pointing out that
the Egyptian god Osirus was worshiped with evergreens long before
these newfangled Roman festivals came into existence.

I apologize for the reference to the Voice of Russia. I didn't mean to
suggest that I engaged in shortwave listening on a regular basis.

Best wishes.

It's not a matter of welcoming them back. Very few went back to Mexico.
They've been here all along. It's their country too, even though they
didn't get as fair a shake as they were promised.

See ya
Steve

Actually in I Cor 15 Paul clearly states:

1 Cor. 15:1-4
Moreover, brethren, I declare unto you the gospel which I preached unto
you, which also ye have received, and wherein ye stand; [2] By which also ye
are saved, if ye keep in memory what I preached unto you, unless ye have
believed in vain. [3] For I delivered unto you first of all that which I
also received, how that Christ died for our sins according to the
scriptures; [4] And that he was buried, and that he rose again the third day
according to the scriptures:

Clearly stating that salvation is dependant upon Jesus Christ and His death
and resurrection.

Hi, Im getting ready to make a Dipole tuned to 155 MHZ range.
From what understand, the feed should make a T where it connects
between the two poles.

My Question: How important is it to have the feed line come off 90
Deg from the poles? If I use double or quad shield RG6 would this
help if I ran the line parrell with the poles?

Thanks in Advance!

Rich

If possible have the feedline come away from the dipole at 90 degrees for the first 1/2 wavelength or so (that would be about 36" for 155 MHz. Also remember that the dipole should be oriented vertically, with the feed coming away horizontally.

You might want to look into building a 1/4 wave groundplane or a J-Pole antenna instead.

Is that the one with the 19" vertical element and three radials? That should perform a LOT better than a rubber duck unless you're you're using lousy coax.

Or is that the discone? Either way it should do much better than a duck.

Are you American Bruce? Does it make you a criminal because there are millions of criminals in the US or wherever you are?

"Bruce Chambers" <bchambers@nospam.cableone.net> wrote in message news:v0ma26qnd99q7b@corp.supernews.com...
Greetings --

And no other religion has such a history of hypocrisy, willful ignorance, intolerance, repression, persecution, torture and organized murder. Have you forgotten such details as the Inquisition, the Catholic Church's tacit support of the Holocaust, the Black Plague (which killed more than a third of Europe's population, largely because the church taught that touching oneself to bathe was a sin)? Have you forgotten the early scientists (Galileo, Copernicus, for example) tried, tortured, or otherwise pressured until they recanted the truth in favor of the church's view? Why else do you think that christians selected the cross, an instrument of torture and execution, as their primary idol/icon?

Organized religion (not just christianity, btw) has always been a tool of a society's power structure to keep the masses down, either via repression or by promising "rewards" in some fictional next life.

Bruce Chambers

If one traces the feasts mentioned in the Bible and the tax periods of the times one finds that Christ was born in September. That aside, many of the pagan holidays were combined with Christian celebrations. The fact that this occurred takes nothing away from the fact that Christ was born and died for our sins.

I have seen a few that claim he was a "mythical" character. He was indeed a real person that walked the planet and is recorded in historical documents. Even if one choices to not believe in the divinity of Christ, to state he never existed is a sign of ones ignorance of the historical facts.

> never existed is a sign of ones ignorance of the historical facts.

No disrespect, but the existence of Jesus is debatable. I have no qualms if you wish to believe that he existed. But there just isn't enough historical data to establish the existence of Jesus with certainty. I'm sure that if you search the Internet, you will find historians debating the point. Given that state of affairs, you would be wrong to call those who do deny the existence of Jesus ignorant. Anyway, to each his own.

Well, just as the christians do, you can believe whatever you like.
If the idea of caramel trees is important to you then I won't disabuse
you of the idea......in fact I'll help you set up a shrine to the
caramel tree of life if you like......just give me the location......

I didn't say he didn't talk about Christ. But he doesn't
quote Christ and/or confirm the stories about Jesus' life as

told in the Gospels. It is odd, since Paul appears to be
the architect of the new Christian faith.

So who kept things going during the Dark Ages? Why do you
assume that Christianity is responsible for the development
of Western nations? Why not secularism?

As a ham you show know about SWR. If high enough a mismatch the reflected power can adversely affect the transmitter...like ruin it. I have a 25 year old Kenwood 10 watt two meter transceiver receiver and an ICOM discone 25-1,000 mhz. roof mounted using RG6 coax cable. I use the transceiver as a quick means of working the local 2 meter repeater. I also have a 150 watt linear and an ICOM 2 mtr/440 mhz. transceiver using a Diamond dual band ground plane tower mounted at 125 ft. I also have 1 15 el. Cushcraft 2 meter yagi at 115 ft. I use separate low loss 50 ohm feeding the two antennas. I am not about to use RG6 for those configurations.

Source record: 39523

I am not aware of any US law enforcement licensed on 31 mhz. 31 mhz. is licensed for business users. 33 mhz. typically is licensed for Fire/Rescue and some business operations. 39 mhz. mostly is Fire/Rescue and some Local Government operations. Typically base station and mobile power authorized is 110 Watts input or less. Double E layer skip has been frequent for the past several months in the eastern US. California Highway Patrol saturates the 39 mhz. and 42 mhz. band. If you hear them in England that would be a quad hop. Each reflected "bounce" is about 1,200-1,500 miles apart.

well so WW11 was the US against UK was it,kicking our Nazi asses???????/

bit confusing that

anyway if you mean the help you gave us in WW11,then it was appreciated,although very late in coming,but i beleive we are still financially paying for lend/lease and probably part of the payment is we have to agree with everything the US does now,was that help worth it i ask???

regardless why should the UK support the US inthis futile war,that is going to swell terrorist groups to an unprecedented level.

where were you at all the atrocities since WW11??,many times you were part of those atrocitie,other times because money comes first,if its a country you are financialy involved with then human rights go out of the window.

look at Israel and Saudi Arabia both supported by the US,Saudi has appalling human rights and you dont bat an eyelid,Israel is an illegal country and again you do nothing,Saddam Hussein has kicked your asses for over 12 years now,he keep goading the US on purpose,and you cant even see it,do you think he really cares how many bombs are dropped and how many people get killed in Iraq,remember his outlook is the same as Hitler,you are basically there to suport the state or country,this man has no qualms in killing his own relatives,he will be safe,he will get out of Iraq with no problems and like Ossama Bin Laden and all his followers will stay silent until he finds a way to attack the west with terrorism.

The only evidence that the west has on 911 is some Saudis were involved,but the US does not want upset such an important partner,but would prefer to blame others

as it did with the PAN AM103 bomb in Scotland,they just blame whoever is whipping dog at the time,curntly Iraq,few years time,probably find US business doing really wel in the new free IRAQ,as with that nice little pipeline goin ahead in Afghansistan,good idea installing a pro US president there who jusyt happened to be working for the company involved in the pipeline project.

very clever

Why? Unless you like to monitor the hundreds of aircraft transponder downlinks from 1000-1300 mhz. or wherever, there's nothing else to monitor unless you are in the line of sight path of a point to point link that is analog which is doubtful.

Graham wrote:

The interfacing of any bandpass filter will attenuate your reception to an extent due to the signal insertion loss.

Trust me. You will not be receiving 1535-1545 mhz. FM-SCPC analog transmissions with a discone nor the GOES8 Wefax satellite using a discone. You will need specialized electronics involving at a minimum a separate antenna (dish or loop yagi), low noise amplifier, in line amp an 12 VDC block that passes 1,600 mhz. signals..

: Hello,

: I am looking for recommendations on a good all band base scanner antenna
: that will be mounted on the roof.

: The main bands I am wanting to scan are Police-Fire at 860Mhz, 460 Mhz and
: 155 Mhz.
: I don't care about VHF lo because there are no signals there anymore.

: Thanks in advance, Mike

I used to use a discone. The only reason I stopped is that I needed it to
transmit on my dual band ham radio. Mine is the Radio Shack. It works
great, but you can go for the Diamond if you want.

That's a big ten-four good buddy. When out on the super slab, watch for the bear in the air..

Probably reliving the days of Smoky and the Bandit, and that gawdawful disco song, Convoy. Drivin' around in their 1976
Ford pickup truck fitted with twin mammas, and a Realistic CB radio from Radio Shack and if they aren't using the CB, they're still listening to tapes from the 8 track player.

Back then heck, even Cadillacs and Lincoln Continentals could be fitted with an optional in dash factory installed CB radio.

Sure ruined the use of CB as it got a real bad reputation in a short time.
Too bad too. Alot cheaper to use than cell phones,
and much safer while driving.

Being Canadian, I run into alot of Americans who sound like they're from Ala-bamb-buh. 8-)

Of course, John Adams also said that "The first and only
Book deserving of universal attention is the Bible." Other
founding fathers, particular the deists, would disagree with
this.

Speaking on good government, Thomas Jefferson says (in a
letter to Joseph C. Cabell 2 Feb. 1816):
"No, my friend, the way to have good and safe government, is
not to trust it all to one, but to divide it among the many,
distributing to every one exactly the functions he is
competent to." Nowhere does Jefferson mention religious people.

Once worked for a company named Sycor in Ann Arbor, MI. We got bought out by Northern Telecom, the main frame computer was put under guarded security and we mere mortals were bared from entering what had previously been our domain.

In retaliation, we entered the forbidden area through the ceiling over the weekend and replaced all the ENTER keys on the terminals with ones that read EH?. A major investigation by our Canadian computer room nazi's failed to find the guilty parties. Caused a real stir for several weeks. I must admit that my name was near the top of the suspect list but was never proven. EH?

Using 75 ohm coax with a 50 ohm antenna will produce an SWR of 1.5:1. Are you saying that will ruin a transmitter?

Suit yourself. What low loss 50 ohm coax are you using? Do you think it outperforms 3/4-inch 75 ohm hardline at 440 MHz?

My point is that most transmitters have no trouble handling a 1.5:1 VSWR. If inexpensive, low loss 75 ohm cable is available (like FREE hardline from the cable company, or to a lesser extent RG-6), we shouldn't automatically turn our noses up at it. It's not going to make our rigs blow up.

The Roman Historian Josephus writes of the execution of one known as the Christus at the time of Herod and Pilate.

Jesus, the Christus, was a historical figure.

As far as the "Son of God" and His divinity your skepticism is well founded. The early followers of Jesus debated the Messiah [Christus} and Divinity questions for almost 400 years. So, you are in good intellectual company. However, at the General Council of Ephesus [approximately 425 AD] the Christian church, which is the predecessor of Catholic Church, put the question to bed. Jesus is both the Messiah and the Son of God. This is an accepted tenet of Christian Dogma and has been held since apostolic times.

Numerous philosophers of approximately 500 years ago debated the issue. They came to the following argument:

Read the Gospels and decide the answer to these questions:
1) Is Jesus insane ? The data in the gospels dispels that question. He is quite rational.

2) Did Jesus do/claim what he did for fame/ financial gain/ political fame/ etc.? Jesus was and remained poor through his life. He knew that Israel had systematically executed prophets. He knew Rome would never tolerate a 'Jewish' king. So, the answer is He was not following human motivations!

3) Is He is exactly who He claimed to be ? If He's not insane and He's not motivated by 'normal' human ambitions, then what alternative is there except to accept His claim?

All questions regarding the identity of Jesus can be reduced to one of these three questions.

The early history of Christmas is based in the Roman feasts, as described elsewhere. These feasts posed a problem for early Christians. How does a Christian hold and maintain Christian values with all that secular carousing going on? The answer was to give the Christian community a period of celebration that matched the calendar of the Roman feasts. [The old adage: When in Rome, do as ...] The actual birthdate of Jesus is unknown and was arbitrarily chosen for the Janus feasts.

Several years ago the United States Supreme Court affirmed that 'Christmas' is a secular feast in the United States. I can't recall the details of the case or arguments but the conclusion of the court is that Christmas is a secular day. So, the holiday has gone full circle from

secular to religious to secular.

I had real good luck doing a partial alignment using the voltage levels
laid out by the service manual. I was able to bring back my R7000 from
the deaf using a plastic screwdriver and a voltmeter. This handled about
75% of the alignment points in the service manual. Since i do not have a
service monitor it was all I could do, but it was enough.

There are no surviving Roman records of the First Century that refer to, nor are there any Jewish records that support the accounts in the Christian gospels --- except one: Josephus', which was published in 93 A.D. It was a history of the Jews. While discussing the period in which the Jews of Judea were governed by the Roman procurator Pontius Pilate, Josephus included the following account:

About this time there lived Jesus, a wise man, if indeed one ought to call him a man. For he was one who performed surprising deeds and was a teacher of such people as accept the truth gladly. He won over many Jews and many of the Greeks. He was the Messiah. And when, upon the accusation of the principal men among us, Pilate had condemned him to a cross, those who had first come to love him did not cease. He appeared to them spending a third day restored to life, for the prophets of God had foretold these things and a thousand other marvels about him. And the tribe of the Christians, so called after him, has still to this day not disappeared.

This account has been embroiled in controversy since the 17th century. It could not have been written by a Jewish man, say the critics, because it sounds too Christian: it even claims that Jesus was the Messiah!

The critics say this paragraph is not authentic. It was inserted into Josephus' book by a later Christian copyist, probably in the Third or Fourth Century. Modern writers suggest that Josephus' account was instead derived from a Jewish-Christian "gospel" that has since been lost.

In any case, it would appear that Josephus' passage is nothing more than recital of Christian belief, not a record of a historical event. For example, elsewhere, Josephus tells us quite unequivocally that Jews inherited the "Wisdom of Solomon" and therefore were especially adept at miracle-working and cures. Josephus tells the story of how

King Solomon himself told how to perform healings. Josephus
describes Eleazar, an exorcist and one of those descendants
of Solomon's techniques: "[I] have seen a certain man of my
own country whose name was Eleazar, releasing people that
were demoniacal in the presence of Vespasian . . . He put a
ring that had a root of one of those sorts mentioned by
Solomon to the nostrils of the demoniac, after which he drew
out the demon through his nostrils; and when the man fell
down immediately, he abjured him to return into him no more
. . . when Eleazar would pursuade and demonstrate to the
spectators that he had such a power, he set a little way off
a cup or basin full of water, and commanded the demon, as he
went out of the man, to overturn it, and thereby let the
spectators know that [the demon] had left the man."
(Antiquities 8.2.5)

Bottom line is you can't bet the farm on Josphesus.

Huh? Exactly what is meant by 'normal' human ambitions?
Even Bertrand Russel critized Christ teachings as told by
the gospels. As far as "His claim", why is that the only
other alternative? [I'm not crazy and I'm not greedy,

therefore, I am the son of god. It doesn't follow.]

I'm getting refurb from Uniden and this is the one that can't do the mod, although I don't want to go to that trouble anyway. The BC60XLT could do the mod, the BC60XLT -1 indicates it has been changed from original.

But picking up 40 mile away transmissions could cause problems if there are cops within a 3 mile radius on a frequency and a high power transmitter with some other agency, lets say 10 miles away. Or is the FCC supposed to prevent frequency overlap like that?

Can anyone recommend where to buy Radio Shack type scanner crystals? Can you still order them from Radio Shack?

7060. Re: Digital frequencie's

Newsgroup: rec.radio.scanner
Date: 2002-12-27 06:35:39 UTC
From: WG <nojunk@mail.com>
Message-ID: <%wSO9.42135$Zv4.3079306@news2.telusplanet.net>

The technology is in place and the radios are built. The Lower Mainland changes its encryption codes at the push of a button with no interruption to the service. That is why Erickson guaranteed it un-scannable. Some of the old cheep systems can't do it but that will change. I do know that all the drug dealers and people that commit B&Es are trying everything to break the system and can't. So let the Americans think that we are drunk, (we didn't get that way from their beer) and spend all of their money for nothing.

The majority of the US population are mindless followers and vote by belief in the Democrat or Republicrat parties that they are both good respectively. Both parties are nuts and not to be trusted. A real person will investigate/self-educate about each candidate to a reasonable level to make the best decisions, regardless of party lines.

Well believe it or not, most people in CB are there for communication but there are a couple channels where the objective is to talk over everyone else..

CB Channel 6 (Freq 27.025) is known as the "Superbowl" channel that features a bunch of guys with high powered radios trying to over ride everyone else's signal. Its an on going contest to see who is the king of the channel

Fifty-fifty between Bush and Gore; remember that Browne, Buchanan, and
others had their supporters, so the majority voted against Bush.

...and that's just the ones who actually turned out to vote; a hell of
a lot of people didn't vote for anybody.

Isn't that the perfect way to rig elections? Check how the elections
work in Fahrenheit 451.

Because that's how the English language works: it keeps old words but constantly tinkers with their meanings. Why call something "electronics" when it has nothing to do with amber? In this case Christianity brought the confusion on by its own propaganda, relabeling a pagan festival but never successfully changing its essence (study real history).

Besides, what is the "God of the Christians"? The paradoxical God of the Eastern Orthodox? The Roman Christian God of political hierarchy? The American fundamentalists' supernatural alpha male? Lutheran theologian Paul Tillich's "Ground of Being"? There are lots of possibilities: Christianity has a deep, long, and complex history. The dumbed-down Christianity of American Sunday School covers only a tiny fraction of this. I personally think Tillich was on the right track here. It's hard to be an Atheist if you accept his definition...

Actually, the BC60-XLT (without the -1) is a different scanner with no frequency readout and only 10 channels. They should have called the 'dash 1' by a different number, like the BC61XLT, but maybe they intended to confuse. So the "dash 1' doesn't indicate the inability to mod it. Somewhere along the way they changed something minor within the radio, apparently. I sent the mod to someone who tried unsucessfully to mod it, and subsequently read somewhere of Uniden possibly changing something to prevent the mod. If you're getting a refurb, quite possibly yours could still be modded, but that's up to you. I'll post the mod to the newsgroup and you can save it in case you ever decide to try it yourself. It isn't any more than opening the radio and connecting two points with a bit of solder or a short piece of wire.

As to the interference referred to, you should have no problem with that. The FCC does to some extent control it by assigning different frequencies in an area so there isn't much interference, and to my knowledge transmitting in FM has the innate property of allowing the strongest signal in over other weaker ones so they don't interfere with one another. My local police frequency is shared with an FD some miles from me, and I DO get some transmissions at times from the more distant FD, but only when my local PD isn't transmitting. Keep in mind, however, that I have several rooftop antennas, and I doubt I would receive the distant FD without them.

There is also something called CTCSS, which prevents the users themselves from receiving the interference on their radios. It works by each agency transmitting a subaudible tone at the start of each transmission which opens up only the radios of the agency that's has its system set for that tone. The result is that when that distant FD transmits, I hear it, but my local PD never does, because their radios are set to a different tone and the transmission doesn't activate the local PD's repeater, only the repeater of the distant FD whose system is set for that tone. Some scanners have the option of a CTCSS board, which would be set for the tone one would want to monitor, thereby eliminating any reception of other users.

7072. Subject: Uniden Bearcat BC 60 XLT-1 30 to 80 channel mod:

Newsgroup: rec.radio.scanner
Date: 2002-12-27 10:53:58 UTC
From: Den6N <den6n@rcn.com>
Message-ID: <auhbg7$f35$1@bob.news.rcn.net>
Source record: 39409

Subject: Uniden Bearcat BC 60 XLT-1 30 to 80 channel mod:

The following is the 30 to 80 channel mod for the 30 channel BC60XLT-1. The mod was found on a scanner BBS and was posted by a guy named Steve Powell.

Open up the radio to the logic board. This involves removing the back plate and battery door by removing the four screws. Grasp the top plate of the radio, containing the knobs, by thumb and forefinger, and gently pull it away from the front plate. This exposes the circuit board which contains the speaker. There is a metal shield held by four screws that must be removed. Under the microprocessor there is a number "1" printed on the board. Below this are the two solder pads. Bridge them together and you've got 80 channels.

I did this mod, and it wasn't too hard to do. I took a single strand of wire extracted from a piece of stranded wire, a very short piece, and carefully soldered it across these two points. Thinking back, it may even be possible to just drag a small amount of solder across them to bridge them.

More than likely due to all the traffic. Turn off the squelch on an
unused channel and you'll still hear lots of noise. Your receiver is TOO
sensitive, compared to the average CB radio.

Experimentation over the years says "no". I have even used string to tie
the coax to the dipole element and noticed no degradation of signal
using my S meter.

The only "unblocked" radio I know that would also "trunk track" was the old Optoelectronics OptoCom. There was an export version of this radio that wasn't cell blocked and all models of it could be used to trunk track using an external computer and software. Not my idea of a very usable setup unless you have a small laptop to keep with the radio.

I guess you could also do something similar using a couple of older scanners. Hook one of them up to a data slicer and use it to drive Trunker or similar software on a computer. Then use the computer to tune another unblocked scanner to the frequency to monitor the trunked conversation. (Wouldn't have to be unblocked for trunking but I assume there is some reason you want an unblocked scanner to monitor with.) Still not a very good setup.

I don't think there are any unblocked scanners that will do what you want directly. Uniden may have made unblocked versions of some of their trunktrackers but I have never seen them. I don't expect there is enough market to justify maintaining both a blocked and unblocked version.

It would be futile to petition our government (Canadian) to
change the name. No Cdn politician would champion that
cause. We can't even get the government here to consider
abolishing the Monarchy (and it's Cdn representives) and the
Senate. (These institutions must have ties to "God"! LOL.)

What's wrong with the pagans taking the holiday back from the Christians? I guess it's OK for Christians to take over pagan holidays, but not the other way around.

The date of Dec. 25th isn't the only thing that appears to have been stolen from other religions by Christianity.

This was found on another forum, posted by someone who collects and reads ancient religious texts:

Your god is a stolen concept this is not an opinion, or a belief. This is a verified, proven, FACT. Therefore, if your religion is to have any truth at all we would have to look to one of the pagan religions that it is made up of. You quote the bible as if it is some kind of authority? The FACT is that the same amount of truth can be found in a Spider-man comic book, and there is more proven truth to the Iliad which is KNOWN to be a work of fiction, than there is to your bible. The sad fact is Scrawny that the creators of your religion were not prophets, or apostles, or disciples. They were thieves, yes thieves, who stole the literature of civilizations that were truly enlightened, and wove it all into one fantastic story. Would you like to know how many "Jesus" characters there were prior to your christ (or as I like to call him "compilation christ"), well here is a list:

Adad of Assyria
Adonis, Apollo, Heracles ("Hercules") and Zeus of Greece
Alcides of Thebes
Attis of Phrygia
Baal of Phoenicia
Bali of Afghanistan
Beddru of Japan
Buddha of India
Crite of Chaldea
Deva Tat of Siam
Hesus of the Druids
Horus, Osiris, and Serapis of Egypt, whose long-haired, bearded appearance was adopted for the Christ character
Indra of Tibet/India
Jao of Nepal
Krishna of India
Mikado of the Sintoos
Mithra of Persia
Odin of the Scandinavians
Prometheus of Caucasus/Greece
Quetzalcoatl of Mexico
Salivahana of Bermuda
Tammuz of Syria (who was, in a typical mythmaking move, later turned into the disciple Thomas)
Thor of the Gauls

Universal Monarch of the Sibyls
Wittoba of the Bilingonese
Xamolxis of Thrace
Zarathustra/Zoroaster of Persia
Zoar of the Bonzes

As you can see this is a pretty extensive list, and I guarantee doing a little research on any of these characters just may shake your beliefs. Here's an example,

"With five loaves at the same time, and with two fishes, He shall satisfy five thousand men in the wilderness; And afterwards taking all the fragments that remain, He shall fill twelve baskets to the hope of many. . . .He shall still the winds by His word, and calm the sea as it rages, treading with feet of peace and faith. . . . He shall walk on the waves, He shall release men from disease. He shall raise the dead, and drive away many pains. . ."

Does this sound familiar?
It almost exactly matches a similar quote from the bible, I'm sure you are familiar with it.
Well this particular quote comes from the "Sybilline oracles", and was a prophecy of the coming of Horus, son of Osiris, of Egypt. That was about 1,000 years before christ. Here are some other similarities between Horus and your plagiarized hero christ.

Horus was born of the virgin Isis-Meri on December 25th in a cave/manger, with his birth being announced by a star in the East and attended by three wise men.

He was a child teacher in the Temple and was baptized when he was 30 years old.
(According to the bible wasnt jesus the first baptism ever? Then how could the Egyptians have wrote about it thousands of years before christ?)

Horus was also baptized by "Anup the Baptizer," who becomes "John the Baptist."

He had 12 disciples.
(Now this is getting wierd, it's almost like jesus stole this guys life or something)

He performed miracles and raised one man, El-Azar-us, from the dead.
(Hey didnt jesus raise some dude named Lazarus too? Oh no that guys name was Elazarus maybe it's not the same person... Sure it's not)

He walked on water.

Horus was transfigured on the Mount.

He was crucified, buried in a tomb and resurrected.

He was also the "Way, the Truth, the Light, the Messiah, God's Anointed Son, the Son of Man, the Good Shepherd, the Lamb of God, the Word" etc.
(really, so this god had all of your god's nicknames THOUSANDS of years

before he did, but you still probably think your little jesus fairy tale is true, well the list goes on)

He was "the Fisher," and was associated with the Lamb, Lion and Fish ("Ichthys").

Horus's personal epithet was "Iusa," the "ever-becoming son" of "Ptah," the "Father."

Horus was called "the KRST," or "Anointed One," long before the Christians duplicated the story.
(Hmm, KRST/Christ probably just another coincedence, right?)

In fact, in the catacombs at Rome are pictures of the baby Horus being held by the virgin mother Isis - the original "Madonna and Child" - and the Vatican itself is built upon the papacy of Mithra, who shares many qualities with Jesus and who existed as a deity long before the Jesus character was formalized. The Christian hierarchy is nearly identical to the Mithraic version it replaced. Virtually all of the elements of the Catholic ritual, from miter to wafer to water to altar to doxology, are DIRECTLY taken from earlier pagan religions.

If you want to take over the holiday that's fine with me. Just don't
call it by it's Christian name. The Christians took over easter and
keep calling it by it's pagan name and I don't care for that either.
I call it what it is to the Christians, Resurrection Day if the pagans
want to celebrate easter that's ok too.

Why call something by it's Christian name if you don't believe
in the God of the Christians?

Simply because it's a common point of reference. Why do
Christians recognize unmistakeable pagan symbols such as the
Easter bunny and Easter eggs?

...but what's in a name? It's what we do that matters. I mean the
Christians have Christmas trees and then Easter eggs and Easter
bunnies....none of it is religious. It's all just a bit of fun. The
Christians can celebrate the festivals the way that they want to as
well, by going to church or whatever. Seriously, there's room enough
for everyone to do what they like and it really doesn't matter what
the name of the day is called....does it?

There's a guy in Baltimore MD sending out their audio off a 785D to the internet at http://68.50.28.83:8000, apparently a "loaner" radio from Uniden to his employer, whoever that is. There are a few others out there that I've heard about, but none for sale to us general public yet.

Tom,

A lot of inquiring minds have been wondering: what happens when you encounter an encrypted transmission? Does it
go mute, skip over it (as with the "data" feature) or just put out the encryption "noise"?

Thanks for the report... I took the liberty of forwarding your post to a couple SoCal scanner groups.

>you still order them from Radio Shack?

Yes, you can still order scanner crystals from Radio Shack, but they cost $10.00 per crystal. And I have found Radio Shack's shipping charges for special orders to be very high. Better (and cheaper) places to buy crystals from are G & G Communications, Monitor Crystal Service, and Ken's Electronics. Most of these dealers sell crystals for between $5.00-$7.00 each depending on how many you purchase.

You may also want to browse eBay from time to time for scanner crystals. I have picked up lots of 10 crystals or more on "the bay" for $10.00-$15.00.

73,
David

Same reason they use the church as a gossip hall or a place to pick up women. They're human. Most people who call themselves Christians act like the rest of the world does 6 days a week. I'm no saint either, but I do try (when I catch myself doing wrong) to improve myself and try to treat people the way He would - not easy, especially when certain people really ask for it.... That's the beauty of accepting the gospel - I don't have to be perfect, because He was in my place. (Lucky for me, let me tell ya...)

But hey - it's not for everyone and that's entirely up to you. To each their own. I'm not here to try to convince you of what you should or should not believe. Some Christians have cited biblical reasons to me why I should, but I prefer to quietly respect everyone's right to choose for themselves.

Now, on to scanning! The wife just cleared the purchase of a PRO-95 on the way home! (I had to promise her a new jacket too - hope she doesn't want mink... LOL)

why would someone want an unblocked scanner these days? So many of the
cell phones are digital now anyways.. There can't be much to listen to
these days.

I hear that if you put them in the filtering in the radio just kills them so yes it can be done but sounds to me like it's not worth bothering with.

I'm hopefully going to be picking one up tonight. Called the store and got a guy to hold one for me, but you know how that goes... it's the last one they have. Think I'll call up another store just in case...

On Don Starr's site there is a chart showing sensitivity for the various extended frequencies. Some are good, others are not. FM broadcast is wideband and the scanner is narrowband so it will not pick up 92-Rock or whatever. Some folks have had good reception on the low end of the mil-air band and others have gotten TV audio. You should be able to get the upper end of shortwave too if you have a long antenna to use.

No, the point to my post is that in the US, no one knows how to properly budget for a digital system so the stupid thing ends up underpowered and barely useable. Add OTAR to the mix and you can forget it - every cop on the force will be wearing a $3500 belt decoration.

So thanks to the oversight of radio system planners, the new scanners oughta work just great in the good old USA... sucks to be you I guess...

>> Iraqi Oil Not Enough For US
>> Last Days of America?
>> By Stuart H. Rodman
>> stuarthrodman@earthlink.net
>> 12-22-2
>>
>>
>> The forces of nature are poised to unleash a powerful salvo of
>> potential kill shots at America and even if powered by all the oil in
>> Iraq, we will be unable to stop it. Consider the following:
>> Tens of millions lost at sea. Not from a terror attack or in some
>> sci-fi scareflick, but in their own homes when America's east coast is
>> swallowed up by a raging surge from the North Atlantic. That's what
>> will happen when the Cumbre Vieja volcano on La Palma erupts in the
>> Canary Islands off the West Coast of Africa, sending a rockslide of
>> biblical proportions splashing into the sea. And scientists agree,
>> it's not a question of "if" but when.
>> The threat from so called "mega-tsunamis" like the one awaiting us
>> from off the coast of Africa is not the only bad news from nature.
>> Residents of our planet's northern hemisphere have only recently been
>> learning about the catastrophic threat of super volcanoes like the
>> active one in America's own Yellowstone Park which has defoliated
>> North America and wiped out most of the world's food supply during its
>> last and most likely not its final eruption. But over the last several
>> years though, Geologists have told the UK Government that the country

>> risks being hit by a giant wave of water that could destroy many
>> coastal communities,
>> "Experts at University College London (UCL) have contacted the science
>> minister Lord Sainsbury to warn him that a collapsing volcano in the
>> Canary Islands could send a wall of water, hundreds of metres high,
>> sweeping out over the Atlantic Ocean".
>> The devastation would be so widespread that not only the East Coast of
>> the United States and the Caribbean would be submerged by the event
>> but also even parts of Great Britain would succumb to the disaster.
>> According to the BBC,
>> "Dr Simon Day, of Benfield Greig Hazard Research Centre, UCL, says the
>> western flank of the Cumbre Vieja volcano on La Palma is unstable and
>> could collapse during a major eruption. This might send half a
>> trillion tonnes of rock crashing into the sea at once".
>> The BBC report goes n to place the magnitude of the coming disaster
>> into proportion,
>> "Modeling by colleagues in Switzerland shows that such a landslide
>> could trigger a so-called mega-tsunami, which has an initial wave
>> height of 650 metres (2,130 feet) and moves out over the ocean at
>> speeds up to 720 km/h (450 mph)"
>> (

><http://news.bbc.co.uk/1/hi/sci/tech/956280.stm>http://news.bbc.co.uk/1/hi/s
>ci/tech/956280.stm
>>)
>> By the time such a wave crossed the Atlantic, its power would have
>> diminished but it could still wreak havoc up to 20 kilometers (12
>> miles) inland.
>> Can't happen? Think again. In 1958 a rockslide created wave in Alaska
>> more than 1,500 feet high, smashed into the coastal community of
>> Lituya Bay. The rockslide occurred along the eastern wall of the
>> Gilbert Inlet:
>> "The mass of rock striking the surface of the bay created a giant
>> splash, which sent water surging to a height of 1720 feet across the
>> point opposite the inlet. This initial sheet of water stripped all
>> vegetation from the point, leaving a bare rock face."
>> http://www.usc.edu/dept/tsunamis/alaska/1958/webpages/index.html)
>> The mega tsunami from La Palma could devastate Americans from Boston
>> to Miami in one splash. In 1998, a huge tsunami, caused by a landslide
>> under water, submerged large parts of Papua New Guinea, killing an
>> estimated 2,000 people.
>> Will these be the last days of America?
>> Our Place in The Cosmos
>> Many are already aware that our species is under siege from comets,
>> super volcanoes, mega tsunamis and not the least of all, ourselves. We
>> shouldn't be surprised about this. After all, we already know that our
>> planet's history is rife with species ending disasters. Otherwise we
>> would all be dinosaurs.
>> According to acclaimed physicist Michio Kaku though, the rise and fall
>> not only of enormous reptiles but of intelligent life as well may be

>> common throughout the universe. We all must live in a troubled
>> neighborhood. In a universe full with black holes, comets, supernovae,
>> predatory virus, and runaway planetary forces, few civilizations
>> survive long enough to develop technologies to harness the cosmic and
>> planetary forces that will ultimately snuff them out.
>> Kaku speaks about "the laws of planetary evolution":
>> "Any advanced civilization must grow in energy consumption faster than
>> the frequency of life-threatening catastrophes (e.g. meteor impacts,
>> ice ages, supernovas, etc.). If they grow any slower, they are doomed
>> to extinction. This places mathematical lower limits on the rate of
>> growth of these civilizations."
>> Kaku says that to survive requires growing sources of energy just to
>> keep pace with demand,
>> "Specifically, we can rank civilizations by their energy consumption"
>> And America leads our world in energy consumption. Unfortunately, we
>> derive most of our energy from a commodity that we don't have enough
>> of, oil. According to some, we can begin to find the alternative
>> resources to build a secure energy future right here within our
>> borders.
>> But others, already invested in the infrastructure of the past have
>> another plan for us. What they don't have for themselves, they can
>> just steal from those who do.
>> America's most giant corporations have Oil rich Islam staring down the
>> barrels of their hired guns. But while Exxon and Unocal drool at the
>> prospect of how they can best divie up the loot from what may later be
>> known as History's greatest armed robbery, it's time the rest of us
>> pause to think outside the box.
>> Consider. Our planet's limited supply of oil was created on earth
>> millions of years ago and will eventually either run out or become
>> thermodynamically and economically worthless.
>> And remember this. It takes energy to drill for oil let alone refine
>> and transport it for market. In order for civilization to benefit from
>> an energy resource, the finished product must be able to release more
>> energy when put to work, than was used to prepare and develop it. As
>> the easy to find oil is exhausted, the more difficult to extract oil
>> that remains is less useful. Eventually, despite advances in drilling
>> technology, the world's oil will become less attractive than available
>> alternatives or may simply become worthless as a source of useful
>> energy.
>> As that day approaches, we live in an America long since petroformed
>> by the oil industry from a land of independent family farms and
>> businesses, to a nation dependent like serfs on their lord, on the
>> barons of oil for everything from fuel to fertilizer. Today as we
>> watch without protest, a new Feudalism is being forged worldwide by
>> their hired guns, our indignation subdued by the prospect of fueling
>> our SUVs with cheap ill begotten oil.
>> And we will kill for them.
>> Finding the High Ground
>> The high ground of the future is wherever the net energy is. That's
>> the energy we can put to work without having to expend much existent

>> energy to get it.
>> It's a measurement that really matters. Kaku cites the work of a noted
>> astronomer,
>> "In a seminal paper published in 1964 in the Journal of Soviet
>> Astronomy, Russian astrophysicist Nicolai Kardashev theorized that
>> advanced civilizations must therefore be grouped according to three
>> types: Type I, II, and III, which have mastered planetary, stellar and
>> galactic forms of energy, respectively. He calculated that the energy
>> consumption of these three types of civilization would be separated by
>> a factor of many billions."
>> Will we sustain ourselves long enough to reach even the first rung on
>> the ladder? Either we will or we will simply join the growing list of
>> extinct species found on our planet and thought to riddle the
>> universe. Kaku must think we have a long way to go just to get on the
>> first rung,
>> "A Type One civilization is one that controls the energy resources of
>> its planet. This civilization can control the weather, prevent
>> earthquakes, mine deep in the earth's crust, and harvest the oceans.
>> This civilization has already completed the exploration of its solar
>> system".
>> As we know from La Palma and Yellowstone, we will need to control our
>> own planetary forces or face certain extinction. But in our present
>> day reality, as we know it, controlling weather and completing the
>> exploration of our own solar system could be generations away, if we
>> sustain ourselves to that point. The energy consumed in getting there
>> will far outstrip the latent energy of our rapidly depleting fossil
>> fuel legacy.
>> But few at the top are thinking about that.
>> A recent report by Alex Johnson of MSNBC that demonstrates that our
>> actions in the Mideast are tailored for an energy policy catering not
>> to the available resources on our table, but to the proprietary
>> interests of Big Oil and their lust for other people's resources.
>> Johnson said,
>> "The belief in some circles is that the heavy reliance on foreign oil,
>> including Iraqi crude, is factored into the White House plans to take
>> on Saddam."
>> Some circles?
>> Johnson of MSNBC quotes Randy Udall of the Community Office for
>> Resource Efficiency,
>> "If you think of U.S. oil production as a six-pack ... of petroleum,
>> four of the cans are empty. We're kind of a black hole for energy,"
>> Johnson also quotes George Sterzinger, executive director of the
>> Renewable Energy Policy Project,
>> "There are technologies that exist now [that] could replace looming
>> shortfalls in fossil resourcesR&D has paid off"
>> Truth? In the year 2000, U.S. energy consumption was estimated at 10^2
>> quadrillion Btu, a staggering figure. Incredibly though, more than 10
>> million more quadrillion units of solar energy hits the ground on
>> American soil each day than we used that whole year!
>> We could build a better mousetrap. The ray's of the sun could used to

>> generate cost effective electricity, to grow biofuels, or manufacture
>> hydrogen to fuel vehicles. In a free market, they'd beat a path to our
>> door. Johnson wrote to his mainstream readers,
>> "But, alternative energy advocates say, the game is rigged. They
>> complain that those shortcomings could be surmounted with adequate
>> federal support, and they accuse the government of talking a good game
>> but failing to deliver."
>> Talking about Big Oil, Johnson pointed out,
>> "Since Bush took office, his administration has directed a total of $6
>> billion in subsidies toward conservation, fuel efficiency and
>> renewable resources, less than a quarter of the $27 billion it has
>> spent on fossil fuels, according to an analysis by The New York
>> Times."
>> So much for free enterprise. Fact is the deck is stacked. Someone's
>> already decided that what we don't have we'll just steal.
>> Speaking to the mainstream, Johnson himself admits,
>> "The U.S. energy challenges are much more grave than the president,
>> the Senate or the House has recognized, than anybody has ever
>> articulated to the American people."
>> And civilization's need for energy may know no bounds. Consider these
>> words from Kaku,
>> "A Type Two civilization is one that controls the power of the sun
>> itself. This does not mean passively harnessing solar energy; this
>> civilization mines the sun. The energy needs of this civilization are
>> so large that it directly consumes the power of the sun to drive its
>> machines. This civilization will begin the colonization of local star
>> systems."
>> And then what?
>> "A Type Three civilization is one that controls the power of an entire
>> galaxy. For a power source it harnesses the power of billions of star
>> systems. It has probably mastered Einstein's equations and can
>> manipulate space-time at will."
>> Forget about it.
>> The Death Sentence
>> Our present day oil economy, though more efficient than steam or whale
>> blubber, won't get us where we need to go and the forces of the
>> universe may not allow us the time to find the alternative. Unless we
>> do, our names and the names of our children will be written in some
>> virtual graveyard of forgotten civilizations; from dust to dust.
>> And there are problems already within the event horizon.
>> I learned from Jay Hanson's unrelenting study of the oil industry
>> (<http://dieoff.org/>http://dieoff.org), that in the '50s they could
>> produce 50 barrels of energy for every barrel consumed producing
>> finished products for the market. By the nineties, the ration had
>> fallen to 5 barrels to 1. By the year 2005, the industry will just
>> break even-it will be necessary to use as much energy to produce any
>> given quantity.
>> Oil production peaked in the lower forty eight states decades ago and
>> even with the potential production of fields in Alaska, we will still
>> remain dependent on imports if we plan to continue selling our big

>> cars. Soon though, because of the thermodynamic costs, it won't be
>> logical to look for new oil in anywhere in the US because, even if you
>> could sell oil for $500 a barrel, exploring, drilling, and
>> transporting it to market would consume more energy than it would
>> recover.
>> The Oil companies already know this. They have to try harder. They
>> have long since outgrown the producing oil reserves in this country
>> and they now have literally set their sights on the low hanging fruit
>> in the Caspian Sea and the vast reserves of Iraq. Of course though,
>> even these thermodynamically rich resources won't be around forever
>> amid exponentially growing worldwide demand.
>> Still Unocal, Halliburton, Exxon, and their off shore clones have
>> worked hard to install a national leadership to do their bidding for
>> them. They had to because the cost of doing business has gotten so
>> much higher. In this case though, they found a way to offset the high
>> costs of acquisition. They can get to the thermodynamically good stuff
>> with taxpayer payer subsidized munitions. Once at the oil patch, the
>> rest will be child's play. And they want to strike while the iron is
>> hot.
>> Fact is the oil companies have already recovered the easy stuff. Oil
>> is simply becoming more and more thermodynamically expensive worldwide
>> and now in order to survive, Oil companies need to concentrate on the
>> low hanging fruit, the "elephant finds", the ones found in other
>> people's countries.
>> MSNBC's Johnson, quoting petro industry sources point out,
>> "The U.S. economy runs on oil, and it does so because it is cheap and
>> convenient - 'it isn't any more complicated than that,' an industry
>> official said."
>> Simple but sad. Through the miracle of petroforming, competing energy
>> sources aren't as versatile as petroleum. They even invented a word
>> for it. Johnson says,
>> "They're not what the industry calls 'fungible,' meaning they can't be
>> used for a wide spectrum of applications".
>> Like producing our food.
>> The bad news is though, when the oil supply ultimately fails, absent
>> alternative technologies, the world's food supply will go with it. But
>> when it comes to developing alternative technologies though, in a
>> government controlled by former oil company kingpins, Johnson quotes
>> George Sterzinger, Executive Director of the Renewable Energy Policy
>> Project, as saying "policies don't move in that direction."
>> Too bad.
>> Kaku says,
>> "Even an advanced civilization is bound by the laws of thermodynamics,
>> especially the Second Law, and can hence be ranked by the energy at
>> their disposal."
>> In reality, because there is in only a dwindling supply of energy that
>> can be sucked from the well, absent an alternative, we will be living
>> in an "energy limited economy". Hanson offers this definition,
>> <http://dieoff.com/page185.htm>http://dieoff.com/page185.htm
>> "An 'energy-limited economy' is one where more energy cannot be had at

>> any price. The global economy will become 'energy-limited' once global
>> oil production peaks."
>> And that could happen soon but when it does, whenever it does, it
>> could mean more trouble than just lining up at the filling station.
>> Consider the problem facing agriculture. Hanson points out,
>> <http://dieoff.org/page185.htm>http://dieoff.org/page185.htm
>> "Food grains produced with modern, high-yield methods (including
>> packaging and delivery) now contain between four and ten calories of
>> fossil fuel for every calorie of solar energy."
>> Hanson adds,
>> "It has been estimated that about four percent of the nation's energy
>> budget is used to grow food, while about 10 to 13 percent is needed to
>> put it on our plates. In other words, a staggering total of 17 percent
>> of America's energy budget is consumed by agriculture!"
>> Again citing other sources, Hanson states,
>> "By 2040, we would need to triple the global food supply in order to
>> meet the basic food needs of the eleven billion people who are
>> expected to be alive. But doing so would require a 1,000 percent
>> increase in the total energy expended in food production."
>> Following the peak of oil production, absent an alternative, Hanson
>> notes,
>> "It will be physically impossible -- thus economically impossible --
>> to provide enough net energy to agriculture"
>> Hanson adds grimly,
>> "Obviously the death sentence for billions of people has already been
>> issued".
>> The Type One Club
>> The once and future lords of the realm, now stocking their counting
>> rooms with the gold from our pockets and soon they hope from the black
>> gold from beneath the oil fields of Arabia, may plan for survival long
>> enough for them to bear witness to a coming die off. The demand for
>> life sustaining resources will ultimately be balanced by the supply
>> and there will only be so much to go around. Organic farmer, Mark
>> Snyder states,
>> "Civilization will develop a new agriculture free from the petro
>> chemicals now used for its existence or time will run out before we
>> even understand what we have done to ourselves."
>> And there's another danger. Kaku calls it the "Uranium Boundary". We
>> can build bombs that could end civilization, but we are a long way
>> from using nuclear power to produce any kind of clean net energy.
>> Today's fission based nuclear plants are net energy losers and the
>> more promising fusion technologies of tomorrow require many times more
>> energy to operate than they can currently produce. The problem is that
>> the development of civilization sustaining energy sources requires
>> long-term investment.
>> It may just be though, that Unocal has already reasoned that there's
>> not going to be enough time or enough food to go around for everyone,
>> so it might as well be "them" that goes. They will stock their
>> cupboards with whatever they need to hunker down for the long haul and
>> they may even want to keep some of the rest of us around to till their

>> soil along the way.
>> There are probably many among us that would be content to go along for
>> that ride. It's the old "them or us". If that sounds good to you go
>> for it!
>> Otherwise face it.
>> Allowing ourselves to steal oil from one another is just the most
>> recent demonstration of the lengths a desperate few will go to remain
>> in control. All the gasoline-fired engines in the world can't turn
>> back the tides of the ocean or divert the explosive fury of even the
>> smallest volcano. Sure, that privileged few might survive, for a while
>> at least, but for most of us, it just won't work.
>> But that's all in the future right? In this the Age of the Consumer
>> Economy, we have been carefully conditioned to expect immediate
>> gratification. Given the right mix of consumer products, say remote
>> controlled cable TV and your favorite aspartame laced diet cola, we
>> can trade worry for happiness.
>> Still, even school kids are taught that crime doesn't pay. In the case
>> of Unocal and their corporate collaborators though, it's also a waste
>> of our time. Granted that justice, though certain may not always seem
>> swift. But considering there's already an undiscovered comet out there
>> with our name on it, time may be the one thing that we just don't have
>> enough of.
>> So for those not already numbed by neurotoxic consumables or the info
>> warfare waged upon us by our media and the elite brokers that use them
>> to convince us all will be OK if we just buy more of the products that
>> make their top investors rich, there will have to be another way.
>> Although there may be enough oil left in the ground to keep our SUV's
>> speeding down the breakdown lanes of the world's highways at least for
>> a few more years, our chemical rockets and diesel engines will no more
>> re-excavate the slopes of the Cumbre Vieja volcano than take humans to
>> the reaches of our solar system.
>> But we can rediscover the energy of sunlight, reform agriculture, and
>> develop an economy of efficiency. It may or may not be too late but
>> only by doing so, can we extend the lifespan of civilization and even
>> hope to gain admittance to some Type One Club of survivor
>> civilizations. Of course policies don't move in that direction though
>> and we may just be too preoccupied now to start doing so.
>> In the meantime, by betting the farm on our dwindling fossil legacy we
>> will be burning the bridge between our geological history and our
>> long-term hope for survival. Along the way, our hands dutifully locked
>> in a stranglehold on the wheel, we leave ourselves vulnerable to the
>> broadside awaiting us around the next curve from the unimaginable
>> forces of planetary change that foretell our extinction.
>> The shameless taking of cheap oil from Peter to give to Paul will be
>> making somebody else rich by the bloodshed of countless others, our
>> own progeny included, but it too will soon run out. Fool's gold. When
>> the party is over, some of us may be fat and sassy but there will
>> likely be a lot fewer humans in the world to bully around, untold
>> collateral damage on the home front, and little else to assure the
>> survival of our seed.

>> The short score?
>> For now at least, the petro chemical giants and the armies they
>> command have become our masters. They have petroformed our land to
>> forge a new feudalism from the ashes of the old realm from which they
>> are themselves descended. Today, as the dark clouds of war gather,
>> they know that the future world of humans will shrink and spasm but
>> they will remain safe, hunkered down in their castles, their cupboards
>> stocked for the centuries with the ill begotten gold of others.
>> As for the rest of us. The vast riches of our once and future masters
>> will do us little or no good, save for some scraps that fall from
>> their tables. Though they are mighty, the explosive fury of their
>> bombs will pale compared with the unrestrained destructive forces of
>> nature that will be left poised to annihilate our planet.
>> And we have been well trained to play our part. Eat, drink, and be
>> happy. Without dumb luck though, the finite fossil fuel legacy of
>> earth's past will not get us through tomorrow, when humanity might
>> die.
>> Kaku suggests that the universe is littered with the corpses of
>> civilizations that failed to reach the Type One high ground of energy
>> needed to counterbalance the unimaginable power of cosmic forces that
>> both create and destroy.
>> Either we will divest ourselves of the oil-slicked bonds that chain us
>> to our addictions and to those that foster the illusions needed to
>> keep us dependent upon them, or we will perish.
>> It will be one way or it will be the other.

Nor is it rec.netcop

It IS alt.os.windows.xp also, though you failed to mention it. I guess this
is topical for that group...

And hey watch it - BOZO is a friend of mine..

You can't pick up your favorite rap station because it is wideband FM, a
mode not available to the pro-95.

CTCSS is great. I got a couple Motorola FRS radios and I don't have to listen to any of that bullshit that usually goes on in channels 1-14 now. Although I'll have to remember people open to all the subcodes will still hear my talk group.

7111. Dipole Antenna and Balun test finding

Newsgroup: rec.radio.scanner
Date: 2002-12-27 22:53:04 UTC
From: Stagger <stagger3@yahoo.com>
Message-ID: <37KcnQRE0e6PRJGjXTWcrg@comcast.com>
Source record: 39349

Hi, I know you guys probably seen a ton of these questions, but I was doing a little test. This is what I found....

If you were constructing a dipole without a balun, you would connect the center conductor to the top pole, and the shielding braid to the lower pole.

I checked my balun with a continuality meter to see what side matches up with the center pin. I found continuality on both output leads from the center pin. Same as for the threaded shield side.

I though the way a dipole worked was by having opposite and separate polarities? If I used a balun, it would seem both the center conductor and the shield would be going to the top pole. And the same for the bottom pole.

Can anybody shed some light on this finding?

Thanks in Advance
Stagger

Totally normal. The balun will appear as a short to DC, but a transformer to
RF. By the way it makes no difference which side of the dipole you connect
the center pin to.

A "balun" (an acronym for 'balanced to unbalanced') is a device which is designed to work at RF frequencies, not at DC. Your continuity tester measures the DC path resistance, not the RF path impedance. At the RF frequencies, the inductance of the coils in the balun will isolate the center conductor lead from the outer conducter lead.

Search the internet for 'balun' and you will find some good explanations of how they work.

You will find that nearby stations will be received about the same, or perhaps a little stronger.. You will receive some distant stations that you didn't receive before. Strong, nearby stations may cause the receiver to overload.

You should use the lowest loss coax you can find. Definitely do not use RG-58. A lot of people are very satisfied using RG-6, with the appropriate adapters. Other people use RG-8, or special low loss, more expensive cables.

Source record: 39357

Sorry, I'm so used to people slamming one or another vendor that I took your post at face value, as I expect at least some others did. I read it as saying that if you gave your card to AES, it was likely that the number would be pirated and bogus charges made using it. As this DOES happen on some sites, I took your statement as being made seriously. I had to have a new VISA card issued several months back as a website (not AES) I had purchased from was hacked and a large number of card numbers, including mine, were stolen and used fraudulently. The card issuer was notified by the webmaster before I ever got a bill, so it didn't cost me anything. So you can understand why I didn't notice your tongue in your cheek, to me this isn't a joke, it's the real deal.

that is sooo funn. live in a valley for awhile that has digital.
Most of the time. 1 block away you are transmitting on analog, the next
block digital. I have hear soooo many local people say that their phone is
just digital and never transmits analog. I told them to drive around town.
Walk in the mall etc. They noticed that half of the time they WERE on analog
in a digital area. Malls rarely are able to receive digital. Big warehouses
the same. So with all these people that swear there is just digitl
everywhere. Look at your phone in these area's or in a town of 200 000
people. it will not always be digital. Flat lands are different. + it is not
illegal here to listen to the boring cell calls anyways.

To clarify, the UHF PD is 40 miles from my mother in law's - I live further from that PD and I'm wrapped in aluminum siding, so I don't get the signals as well with a duckie at my house. I'm fortunate that I can throw all sorts of antennas on my roof as the owner. I've read about many people who can't mount one outdoors 'cause they're renting or living in a community where it's prohibited.

Ahh. We cant mount stuff here with screws unless its a satellite tv dish. Partially, for that reason, I'm getting a mag-mount from RS. That way I can move from car to a polarized surface on the balcony and have some freedom without rasing the ire of the apt. managers.

Not likely, Most have built in protection to prevent that, and if you
have a vacuum tube power amp, they are just about unbreakable. However
really gross mismatches can overheat the coax to the point that it
actually catches fire! It does greatly increase the losses in the
transmission line.

Even then, you are talking about gross mismatches. (worse than 3:1)

Digital sucks anyway! The delays are very noticeable. At least to my ear. others say that they can't notice the delay. Oh well, call yourself on a landline and speak and you will hear the delay.
As far as analog cell phones go, the last time my buddy accidentally searched that range, they were still very well used as you had stated. he said analog signals would disappear to never be found again. I would assume that is due to the fact of the phone switching back to a digital signal.

I used to do CB. I was using USB on channels 36-40 and the speech was always great for that unless the skip conditions were good then I could not talk to my friend 3 miles away! our group that talked on sideband were always courteous to each other and we never used the echo mikes or roger beeps that were so common with the AM channels. Try just tuning 27.365 on up to 27.405 upper and lower sideband and see what you can hear. I have not talked or listened to these in years so I may be way wrong from what I was used too. In my days we were mostly hobbyists interested in having the best signal with the least distortion. This does not mean we used high power amps. Some did. I have made contacts on 11 meters as far away as you can imagine. Australia, Isle of Crete etc... This was all with a good 11 meter radio and a great beam antenna. It was a lot of fun and I miss it a lot! I'm in an apartment now so the hf radios are sitting idle.

I hope your Pro-95 is a lot better than my Pro-94 was. It had a front end
so wide that when the hospital 15 miles away paged on their frequency
the Pro-94 would stop on WHATEVER frequency that was up next and
the squelch would open (even turned all the way up) and in would come
"housekeeping 3 4 0 housekeeping 3 4 0"! Other than that it was a real
nice scanner.

lol. I don't know. I think out of all the years I have scanned it. maybe once every 6 months to a year. I may have heard it once. I laughed and went back to having a qso on a local 2 meter repeater. I still think eaves dropping on strangers is very boring and lose of interest is fast and easy. I rather listen to our local rcmp or fire. atleast that is real action. not some inflatable doll or whatever some phone sex wimps use. Get the real thing and not a hand. gee.

I personally hate digital. yes it is not snowy and hissy. but when you get on that fringe of that site or area. you start hearing parts of your voice or they hear parts of yuor voice. If someone wants to get off hearing what kind of beer I like or what milk I want for my son. GO right ahead. Can we say Boring. lol

Hey, that should improve it considerably over the duckie. I've tried that when I had antenna problems at times, and it worked well, with it near a window in my case.

>help.

I moved a discone antenna from the second floor upstairs to the attic.

The improvemnt in reception was nothing less than dramatic.

At a time my reception was being completely ruined by total overload
from a nearby FM broadcast station.

I solved that problem by using a FM notch filter from Stridsberg Engeneering
http://www.stridsberg.com/prod02.htm.

Actually, there is no doubt that a Man named Jesus existed (there are
many named that in Mexico presently), but he was only one of many
so-called "miracle workers" that lived back then.

Another effect of 'overload' is that the receiver may become insensitive
when the strong station transmits.

Did a Google image-search for 'radio shack patrolman' and came up with 2 models - one covering 147-175 Mhz, pretty old, and a newer one, the Patrolman 50, with multiple bands tuneable in an analog fashion, probably the one referred to. It has AM, FM, VHF air, VHF lo, and UHF 450 -480, but it doesn't seem to have VHF hi from what I can see in the poorly-lit photo. That sems odd to me...

Hi Everybody,

The feed sould be working now, as of 10:18, 12/28/02. I had to change the link from the group site, so please update your bookmarks to:

http://www.groovyghosthunters.com/houstonfire.asx
or:

http://groups.yahoo.com/group/houstonfd

And I've adjusted the audio level, that's about as loud as I can get it before it starts to distort.

Sorry for any inconvience. I've also added Shell Chemical response Team and CIMA dispatch to the fire scanner, so when conditions are good I should be able to pick those up.

Take care and Happy New Year,
Marvin

References I found to various Patrolman radios - I get the feeling ALL the early RS scanners and tuneable receivers were called "Patrolman" back when...

Patrolman 3 - ??? - http://www.webdeals.net/scanpix/pro3.jpg - looks like a home stereo!

Patrolman 10 - 8 ch - 148-174 & 450-470 http://www.webdeals.net/scanpix/pro10.jpg

Patrolman 14 -??? - http://www.webdeals.net/scanpix/pro14.jpg

Patrolman 45 - 8 ch crystal - 30-50 & 148-174

Patrolman 47 - 10 ch crystal - 30-50 / 144-174 / 450-512

Patrolman 60 - "6 band"

Patrolman CB-6 - multiband analog tuneable - http://www.webdeals.net/scanpix/patrolcb6.jpg

Patrolman SW-60 - "shortwave/ VHF/ UHF" - http://www.webdeals.net/scanpix/patrolsw60.jpg

Patrolman "12678" (?) - multiband analog -
http://www.webdeals.net/scanpix/patrol12678.jpg -
(I remember when CB's and all had the 'woodgrain'
look)

Does anyone have any experience with their scanner becoming desensitized or less sensitive than it used to?

I have a pro-2066 that will barely or not at all track 800 systems and won't even pick up VHF 154 range on _local_ signals.

I also have a pro-93 that when i got it had great reception but now is starting to become more staticy on 800 trunk.

Any way to combat this problem? I searched Google for this and couldn't find anything.

> I'm just running antenna on back of scanner.
>

OK. That eliminates all external problems, most likely. If you want to try, you might open up the scanner and look at the antenna jack inside where it solders to the PC board. Look very very closely to see if "fatigue" cracks have developed around where the connector is soldered to the board. Check both the center conductor, and the ground side, if it is soldered too. Sometimes, as the antenna gets bumped, wiggled, over time, it causes a micro crack in the solder joint. Otherwise, may well be something wrong in the RF amp circuitry.... which would probably mandate a trip to the factory for repair.

>why would someone want an unblocked scanner these days?

Because "blocking" doesn't just involve locking out frequency ranges.
It also involves filtering to supress cellular "images".

An 800 MHz tranceiver usually has a sensitivity around .25 uV (SINAD).
If the sensitivity of the radio gets any worse than .45 uV, the user
will turn it into the service shop complaining that it cuts out, and
in some locations he can't hear anything at all.

Current scanners, with the image filtering in place, typically have
sensitivity around .75 uV.

Old? Without looking it up, I'd say that it's only been out of
production for about three or four years now (and it was only produced
for a short time).

For home use, it blows away anything else ever made, including the
high dollar Kenwood and AOR models.

>Not my idea of a very usable setup
>unless you have a small laptop to keep with the radio.

There is also PDA software for controlling the Optocom.

Most of the early model scanners including the old rock (crystal)bound
scanners from Radio Shack were all labeled Patrolman.There were many
different Patrolman scanners from years gone by,if you can give us a model
number,or if you can read on the back and get a catalog number,you can go to
Radio Shack,and they can possibly get you a manual for it.Hope this is of
some help,and good luck...Lamar

The bathroom stall is down the hallway and your language (colloquial English at best) is reprehensible. There are ladies and other fine people in these groups and many speak Italian and Polish and many fine foreign languages that you seem to disdain. I'm not going to force any metaphors on you but...

WILL YOU PEOPLE SHUT UP?

I'VE THOROUGHLY HAD IT WITH THE ANTI-FOREIGN, ANTI-GAY AND ANTI-SENSE YAHOOS IN THE PEANUT GALLERY!

Buffalo Bob brought a paddle in case you won't behave, I hope.

This crap won't even fly on the Truckin' Bozo radio show.

This group is about antique radios and phonographs, and a bit of mostly related off topic posting. Don't go cross-posting it unless it relates Completely with the topic of this group!!!!!!!!!!!!

The next vegetable that pops up should be salted and served.

IOTD (Idiot of the Day) goes to:

Knoxville is now using an 800 MHz trunked system. Your radio does not receive these frequencies. The Radio Shack PRO-95 would be a good radio to get if you want to hear the police again. Details of the trunked system are at http://www.trunkedradio.net/modules.php?name=TRSDB&sid=964

From: Bruno <mongkon.anousak@skynet.be>
Message-ID: <3e0e60dc$0$90219$ba620e4c@news.skynet.be>
Source record: 39312

Dear All,

I ordered a few days ago two scanner antenna at AES on line, with credit card.
I thought everything was alright until yesterday when I received an email from them
asking for a copy of both sides of my credit card. They want me to provide them with
the copy by fax or as an attachment in an email. What do you think of it?
It doesn't seem to be the usual way for online "shopping".
Why do they have a secured web site if they still ask customers to send them a copy
by email or fax? I don't want the copy of my card (with my signature) to lay on a desk or
in an unsafe place...Anyway, I'm not going to send any copy of my card...

Has one of you already had a similar experience?
I sent them an email yesterday evening, but have had no answer yet...

Bruno

7173. Pro-95 and Cell phone

So the overall opinion is that the is no problem when used for
receiving - correct?

Anyone got any maths to help with that, i.e. just how much little will
the difference be over say 50m of RG58 vs 50m of RG59 @ 27Mhz, 144MHz,
433Mhz & 1296Mhz

I need to know cos I am just setting up a couple of antennas on the
roof and if I can use cheaper cable I will.

Regards & Happy New Year

They need the CVV2 verification number. The verification number is a
3-digit number printed on the back of your card. Usually on the strip
where you sign the back of your card.

With the latest round of Internet/Credit Card fraud many onLine venders
are requiring this code. Its is a way the onLine vendor can verify the
fact that you are actally holding the card and you didn't simply find
the card number via "dumpster diving".

I run several businesses onLine and my Credit Card Merchant Banks are
asking me to start requesting the CVV2 codes. Once I set up the
websites to make the CVV2 code a requied entry then I'll get a reduced
merchant rate as by requiring it will reduce the banks risk.

Start getting use to giving the CVV2 codes, just the other day I ordered
by telephone with a company and they requested me to read them the code.

That's not by George Carlin. Here's a link to his web site where he denies authorship.

<http://www.georgecarlin.com/georgecarlin/home/bogus.html>

It's also been attributed to Ted Nugent - he's also denied authoring it.

Frequencies still popular for the cordless phones are 46.61 to 46.97 MHz, these are usually the base unit and you'll be able to hear both sides of the conversation.

Another hot band starts about 900 MHz - 925 MHz. The Pro-95 should be able to cover that band as well.

If your scanner is radically less sensitive than it used to be, I would check:

1) the antenna system, including the cable, the male BNC connector,
and any cable adapters.

2) the female antenna jack on the scanner, both for an enlarged center
contact and check internally to make sure the connector has not separated
from the circuit board.

3) some scanners use diodes in the front end circuitry and one of them could
be defective. Determining that requires some expertise in soldering.

4) try tuning 5 kHz higher or lower in frequency to determine if your
scanner receives signals better. The reference oscillator could be out
of alignment. (I've found this to be rare except with
ICOM receivers.)

Bruno,

Sorry to hear about your experience. With almost five decades of life's experience, it seems to me Americans are quickly loosing their minds!

I too have had some 'unusual' experiences with credit card purchases. For example, I was asked some months ago for the last four digits on the back of my CC. The retailer said it was for, what? SECURITY REASONS!!! Seems EVERYTHING weird and unusual today is now for our 'security' (right!).

I said I would not give that information. I told him he shouldn't need ANYTHING but the CC number and exp. date especially considering the item was being shipped to the SAME ADDRESS the CC is billed to! He got it after that. If your antennas are being shipped to the same address as the CC is billed to the retailer should need NOTHING more.

Amazing what is being done to 'protect' us now-a-days! I think a lot of this REALLY is 'paranoid schizophrenia'. Personally, I'm not expecting God to bless America!

There are a LOT of other retailers which would appreciate your business without you having to FAX your personal information across America! Perhaps you'll consider just dealing with them.

Vic

it is just a matter if decrypting the transmission. CDPD is easily heard on the unused cell channels. But. since it is atleast at 19.2k and encrypted. there isn't really a point yet. unless you have the cash to figure it out.

My PRO2066 is fairly deaf on 800 when hooked up to an antenna that's resonant anywhere below UHF. Let me explain...with a 2 meter ham antenna the 800MHz reception is just plain awful. With a 70cm ham antenna it is far better but still not perfect. With a true 800 band antenna, it is incredible...I am able to hear certain trunked repeaters at least 30 miles farther away from the repeaters as I can with a 70cm ham antenna.
The way I have tested all of this is simply by carrying three different antennas and changing them (NMO mount) during various trips I have made.

Source record: 39336

At 27mhz, I'd go with either RG-58 or RG-59.
For 144, 433, and 1296mhz, go with the RG-59.
(assuming 50meters)

Here's the explanation...

At the connection between a 50ohm line to a 75ohm line, the vswr is 1.5:1
This interface transfers 96% of the power through, and reflects 4% back
which should result in a through loss of apx. 0.2dB.
If you're doing a 50ohm antenna, to a 75ohm transmission line, to a 50ohm
receiver,
then you can pretty much count on 0.4dB of losses from the 2 connections
(50/75/50).
(considering the cable and the 50meters, the re-reflections are pretty much
gone)

Dug the losses below out of an old transmission line text. They're in
dB/100 feet.
(they're off of a chart, so they may be a little off)
Cable 27mhz 144mhz 433mhz 1296mhz
RG-58 2.6 6.5 12.0 22.0
RG-59 2.0 4.4 8.0 14.0
RG-59 (foam) 1.5 3.2 5.9 10.0

For 50meters, just multiply the cable losses above by 1.64 (50m = 164feet)

Here's a quick example (at 433mhz):

using RG-58, the losses will be 19.7dB
using RG-59, the losses will be 13.1dB (cable) + 0.4dB (50/75/50) = 13.5dB
using RG-59 foam, the losses will be 9.7dB (cable) + 0.4dB (50/75/50) =
10.1dB

The RG-59 scenario is 6.2dB better than the RG-58
The RG-59 foam scenario is 3.4dB better than the RG-59, and 9.6dB better
than RG-58

Hope this helps (other RF engineers, please check my math)

Best Regards
Joe.

How bizarre.

I think I need a Tylenol.

Less than a month here and we have such a mess. Huh?

>How about winter solstice celebrations, winter festival,
>Brumalia or Saturnalia?
>

I believe it is all based on solar ceremony. Dec. 21st, is the
shortest day of the year. The sun has gone to the depths. The
days begin to get longer thereafter. After 3 days, it has "risen"
once again. Dec. the 25th is the first day after the 3 day reference.
Its similiar to the fact that New Years begins when the star "Sirius"
comes over the horizon with the sun on Jan. 1 by Egytian calendar.
It and many other holidays are references to solar events such
as the equinox's and solstices. The traditions probably just got
tagged on to any religion as a means to recruit worshippers from
other belief systems. Competition is good for business. Yes, when
in Rome, do as the Romans do. It is probably based on the fact
that the sun (son) is "reborn" on that day according to pagan
belief systems.

Joe, I hate to break this to you, but RG-59 is 75 ohm cable. Why on earth would you use RG-59 over RG-6? Its performance at UHF is horrible (not because it's 75 ohm, but because it has high loss).

There is no inherent problem using RG-6 for receiving or transmitting. I've done both with good results. A 1.5:1 VSWR has minimal effect on loss, and will not cause your radio to self destruct.

Again I ask: What horrors do you think will befall someone who dares to transmit with RG-6? I've done it with good results.

> Get the 'quad-shield' version for best performance.

The "quad shield" provides better shielding, but no lower loss. Regular RG-6 has both a braid and foil shield which should be more than adequate for most applications

>> Is anyone out there using the Radio Shack 20-176 antenna?
>> I have purchased one but have heard a couple of reports that it's no
>better
>> at 30' than the rubber duckie mounted on the scanner.
>> Please give me your impressions

I have about 8 of them mounted in my attic, and I'm very impressed with the performance. In fact, in my location 5 miles from NYC, they seem to work a little too well, in that I often hear several agencies on some frequencies in addition to the one I'm interested in. Also, in comparison with my outdoor VHF and UHF verticals, performance is almost equal.
FYI, my house is a 2 1/2 story wood frame house, and the attic has a gabled roof that is covered by shingles, so very little, if any, of the received signal is attenuated.

Hope this helps.

- Craig

RG-6 will perform well, as will more expensive cables such as LMR400. I would not use RG-58 or RG-59 as those cables have significantly higher loss. On a performance vs. cost basis, it's hard to beat RG-6.

Some folks have expressed concern over using 75 ohm cable (e.g., RG-6). Feeding a 50 ohm antenna with 75 ohm coax will result in a 1.5:1 VSWR (as opposed to a 1:1 VSWR if 50 ohm cable were used). If you know the loss of a cable when it is matched, you can determine the additional loss due to a mismatch. The information below is from a graph in the ARRL Antenna Book:

Matched Loss Additional Loss due to 1.5:1 VSWR
2 dB 0.10 dB
4 dB 0.15 dB
6 dB 0.16 dB
8 dB 0.17 dB
10 dB 0.18 dB

As you can see, the additional loss from the 1.5:1 VSWR is VERY small. The moral is to choose a cable that is inherently low in loss, and don't be concerned about a slight mismatch. This holds true for receiving as well as transmitting.

Friday and Saturday nights make interesting listening when people go and come from bars ... if you are listening to a signal and it switches frequencies, just search and you may find it again... I've done that many times....followed a conversation as it switches towers or frequencies.

>looking for trunk tracker scanner that is unblocked,

Good luck, because they are no unblocked trunk trackers. If you want a full coverage 800mhz scanner, why not buy one of the multitudes of PRO-2006 scanners that show up on Ebay every day?
I've owned one for 12 years, and as a conventional scanner, it performs equally as well as my BC-780XLT, and a bit better than my BC-895XLT.

Cheers guys - great debate and good answers.

From Maplins I can get FT-100 750hm coax with 21db / 100m loss at 1GHz
for 45p / metre or RG213U 50ohm coax with 23db / 100m loss at 1GHz
for 105p / metre. I think the choice is obvoius now.

Regards Fred

TV signals are all above 54 MHz, so their harmonics are all above 108 MHz.
Is that where you're hearing them?

What frequency range does your "scanner" cover? At what intervals are these
"hum carriers" spaced? They could be due to the sweep oscillator of a nearby
TV set or emissions from a computer or other device.

Having a radio that is "real sensitive" can be a good thing. But if it has
poor dynamic range, it will be susceptible to overload (e.g.,
intermodulation distortion products). The best radios have good sensitivity
AND good dynamic range.

Uniden will debut it's second generation digital scanner
at the upcoming CES show. The scanner will support 9600
digital control channels and have a few more features that
the new Digital scanner does not. Look for it to come out
1st qtr 2004.

7214. Re: Space Station

Source record: 39254

Heard today, Sunday, December 29 at 1825 Zulu. Station commander Capt. Ken Bowersox, USN, was in contact with what I assumed to be school children. Great signals as the station crossed nearly directly overhead of my location. Remember you can only hear the downlink (ISS) and not the uplink unless you are close to the station transmitting up to the space vehicle. I never heard a call sign but with the commander on the radio I suppose it was NA1SS. Downlink is 145.800 mhz. Just put it in your scanner memory from time to time you will hear a packet signal rather than voice. 73, Pat K4AVO

7215. Logical Channel Numbering, what is it and how do I go about deciphering stuff that deals with it

Newsgroup: rec.radio.scanner
Date: 2002-12-29 21:40:47 UTC

A newbie asks:

I got all the eps, fire and ems freq's for my city and I have no idea what in the hell they mean by logical channel numbering--those little five digit codes next to the names just don't jive out with what a frequency is suposed to look like? Please tolerate my sheer stupidity where this is concerned, and know that any help would be greatly appreciated.

Frequencies:

Logical Channel Numbering:

866.0375 (1) 866.2875 (2) 866.5375 (3) 866.7875 (4)
867.0375 (5)
867.2875 (6) 867.5375 (7) 867.7875 (8) 868.0375 (9)
868.2875 (10)
868.5375 (11) 868.7875 (12) 866.0625 (13) 866.3125 (14)
866.5625 (15)
866.8125 (16)

Fire Operations:

Art, personally I'd never use RG-58 or RG-59, unless it was a short jumper,
for a receiver.
50 meters of RG-58 at 400mhz - you might as well leave the antenna jack
disconnected.
If you've invested in a good receiver, you'd likewise invest in the right
antenna system.
I'm currently using LMR-400 here in the shack, and have a stash of 1/2"
Andrew.
But it's a time vs. money for connectors thing...

I was just stating the math based on what Fred indicated he had for
materials.

By the way, good points in other followups you've made to this thread.

Joe - going back to lurk mode.

At least observance of the Magi/taking Jesus to the Temple has some
credibility for this time of year. Dr Gene Scott & others have shown from
scripture that Jesus was born around the Jewish New Year/Feast of the
Trumpets.

> In 336 A.D., Pope Julius declared Christmas on December 25,

Now if only today's RC church could be as honest about Maryolatry/
Immanculate Conception/Incisionless Caesarian Section etc. as was
Pope Julius about trying to hide Xmas behind pagan ceremonies.

> The heathen ceremonies referred to were the Roman festival
> of Saturnalia and Brumalia.

> evergreen trees. Lamps were kept burning to ward off the

Tree worship is at the root of the monotheistic religions, not just
of the pagan mythologies. For example, the Muslims like to quote the

Bible as referring to 'Allah' in Joshua 24:26 in order to lend their religion credibility. But we know from Genesis 12:6 that it refers to The Oak of Shechem as an altar/sancutary of the Lord. 'Allah' is a semitic word for 'oak' and like the druids, the early semites thought that oak trees were holy. When Israelites took over, they merged the pagan god's place into their own religion, just as the Chrisitians had done to the druid holy places. There are also other references in the Bible to holy oaks via the words "Elah" & "El".

Ah, so Aurelian set the precedent for Christmas Day being confused with the birthday of Jesus.

I'm on a BUNCH of scanner email groups, and the PRO-95 has gotten almost universally great reviews. A few duds (probably mostly factory goofs, about which R/S is usually VERY GOOD about exchanging on the spot). If you don't need - and/or can't afford - the forthcoming Uniden DIGITAL scanners, that's where I'd look.

Actually, he would be right in the literal sense of the word "ignorant".
Even goy historians at the time admitted the existence of Jesus, and
a Jewish historian claimed that he did exist, and as he was Jewish, that
makes him credible. As he had access to original documents/witnesses that
proves the matter beyond the ability of modern ignorant historians to even
cast a reasonable doubt on the matter.

Dave Shrader (david.shrader@attbi.com) muses:
> 2) Did Jesus do/claim what he did for fame/ financial gain/ political
> fame/ etc.? Jesus was and remained poor through his life. He knew that

Only Mary was poor, and then only technically, since religion is big business. In order for her to live at the Temple, she must have been from the Levites who had no property of their own. Joseph on the other hand was a building contractor, which was a medium-sized business, and he was middle class. Joseph's uncle, Joseph of Arimathea, was an official Roman supplier for various base metals, which was big business, and made him wealthy. He then adopted Jesus when Joseph died, so Jesus did not become poor due to the death of Joseph, as is commonly taught.

> feasts. [The old adage: When in Rome, do as ...] The actual birthdate
> of Jesus is unknown and was arbitrarily chosen for the Janus feasts.

It is known: as shown by Dr Gene Scott and others, between the Feast of the Trumpets and the Jewish New Year.

Ah, the good ol' BC210, it was my very first programmable scanner, used
it for YEARS!

Is that the screw-in one that goes in thru the hole in the top, or the
"Motorola plug" car-radio antenna-type plug that plugs in the back?
Either way, I'd take it by a Radio Shack, as they probably have
something that'll work... both are (or WERE) fairly common back when the
210 came out... 25+ years ago.

If that doesn't do it, try contacting Uniden Parts & Accessories at
accessories@uniden.com, or call
1.800.554.3988 - M-F, 8-11:30/12:30-5 Central time

Good luck...

> where at best you're wasting signal before it even gets to
> your antenna, and at worst you're seriously risking blowing
> up your radio.

Let's take this one point at a time:

1) Using RG-6 will create a 1.5:1 VSWR. That will NOT risk "blowing up" any radio.

2) The amount of signal lost due to the 1.5:1 VSWR is less than 0.2 dB in any real world use. (See my other post in this thread.)

3) At 450 MHz, more transmitter power will make it to the antenna with RG-6 than with RG-58, RG-8X, or even RG-213. That's because of the lower loss of RG-6 at UHF. And as a bonus, it's more flexible than RG-213, and much cheaper.

4) You recommended using RG-6 for receive applications. If you think it's loss and/or impedance characteristics are unacceptable for transmitting, why do you think it's OK for receiving? The loss (in dB) will be the same in either case.

> of Judea were governed by the Roman procurator Pontius
> Pilate, Josephus included the following account:
>
>'About this time there lived Jesus, a wise man, if indeed one
> ought to call him a man. For he was one who performed

Here Josephus casts questions Jesus' divinity, by calling him a wise man, and then asking a rhetorical question "if indeed one ought to call him a man". We know he's asking a rhetorical question, since he never gives us any reason to believe that he was not a man.

> surprising deeds and was a teacher of such people as accept
> the truth gladly. He won over many Jews and many of the

This is a bad translation. Here Josephus is calling people who gladly accept anything as the truth gullible.

> Greeks. He was the Messiah. And when, upon the accusation of

This is also a bad translation. It should say "He convinced many Jews and many of the Greeks He was the Messiah". There is no period in the middle of that sentence. This is clear from the sentence that follows, which explains the consequence of the dubious claim 'He was the Messiah' by implying accusations of blasphemy and/or treason.

> the principal men among us, Pilate had condemned him to a
> cross, those who had first come to love him did not cease.
> He appeared to them spending a third day restored to life,
> for the prophets of God had foretold these things and a
> thousand other marvels about him. And the tribe of the
> Christians, so called after him, has still to this day not

>
> This account has been embroiled in controversy since the
> 17th century. It could not have been written by a Jewish
> man, say the critics, because it sounds too Christian: it
> even claims that Jesus was the Messiah!

It doesn't: it only reports that Jesus convinced others of that claim.

> The critics say this paragraph is not authentic. It was

Those critics are basing their argument on a bad translation. It's easy to make winning arguments against strawmen.

> inserted into Josephus' book by a later Christian copyist,
> probably in the Third or Fourth Century. Modern writers
> suggest that Josephus' account was instead derived from a
> Jewish-Christian "gospel" that has since been lost.

Let's assume that Josephus was too lazy to verify his sources. Even so, he still has more credibility than any modern historian on the subject.

> In any case, it would appear that Josephus' passage is
> nothing more than recital of Christian belief, not a record
> of a historical event. For example, elsewhere, Josephus
> tells us quite unequivocally that Jews inherited the "Wisdom
> of Solomon" and therefore were especially adept at
> miracle-working and cures. Josephus tells the story of how
> King Solomon himself told how to perform healings. Josephus

This was not a recital of a Christian belief. And notice that Josephus shows no negative consequences for the Jewish beliefs, which is his way of showing that Jewish beliefs are superior to Christian ones. The final step in the proof, is that Josephus in his original used the past subjunctive when writing "He WAS the Messiah". Had this been a Christian belief, it would have been in the present indicative: "He IS the Messiah".

Still listening to one right now! It's a great basic programmable - and undoubtably cheap at online auctions. Its one "aging" problem is loss of displayed frequencies due to a capacitor dying of old age.

>Is that the screw-in one that goes in thru >the hole in the top, or the

bought this scanner used a few weeks ago. Looks like the backlight is dying. It's very very dim when set to "bright" and nearly off at "middle".

Anyone else run into this???

I find it odd that it is getting dimmer instead of just dying... Maybe the problem isn't the lamp?

Any ideas??? Are replacement lamps available???

Thanks

Nonsense, he would be wasting about 4% of his signal due to mismatch. This would be more than made up by the lower loss of RG6. As to blowing up the radio, a 1.5 to 1 SWR will not hurt a radio.

Simply old wife's tales.

Good idea, Matt. I've always been VERY pleased with the overall performance of the homely "all-band" scanner antenna from the Radio Slack, the 20-032... you may need to chop off the BNC connector and replace it with a "motorola" plug, I guess! Get one of those while you're at the store, "bajamadness" Bill
See it at http://shorterlink.com/?6ZI1OY

Thanks. It looks like the little crybaby has tried to sign me up for
dozens of porno sites, but Mailwasher.exe just deletes all the crap.
Anyway, one phone call and my ISP will change my email addresses. I
have three available at once, and I haven't even used the other two.

thanks alot for the information. It was given to me by one of my
father-in-law friends and i really haven't never use it until the other day.
I took an old screw in from an old cordless phone that i found and stuck it
down inside the top and let it touch where the old antenna goes. It works
great with a little static. I was trying to find the right one.
I got one more question where the best place to buy a small tower!

thanks
Bill

Because you are too stupid to know the difference between the writings of
Josephus and those of the Bible, and the difference between a translation
of a copy of a copy of a copy, and the copy.

>>>inserted into Josephus' book by a later Christian copyist,
>>>probably in the Third or Fourth Century. Modern writers

But it's still there, and confirms what other non-NT texts. You need to
listed to Dr Scott, or better yet travel to the University Cathedral and
have a look at his manuscript collection.

>>>In any case, it would appear that Josephus' passage is
>>>nothing more than recital of Christian belief, not a record
>>>of a historical event. For example, elsewhere, Josephus

>
> That's your opinion.

Liar: it's the opinion of Josephus himself.

>> Josephus in his original used the past subjunctive
>> when writing "He WAS the Messiah". Had this been a Christian belief, it
>> would have been in the present indicative: "He IS the Messiah".
>
> I think your reading too much into it. No doubt because you
> need to.

Liar: as bad as that translation is, it still does not say that "He IS the
Messiah". If you weren't such a stupid liar, you'd have noticed that the
words 'He' and Messiah are capitalised, which Josephus would not have done.
You're quite pathetic for not noticing something so obvious.

(Even if the monks who copied Josephus changed the capitalisation, that still doesn't meant that some monk inserted passages. In fact, changing capitalisation in many cases is sufficient to change the meaning, since a capital letter would signal the start of a new sentence. But, they likely changed the capitalisation to conform to the Church's editorial policy, and not to your conspiracy theory. In order to save time, ink, space, or work, the copyists often omitted punctuation and spaces between words, which would enhance the effect of changing capitalisation.)

Liar: there are plenty of records. Most recently, archaeologists have
discovered the ossiary of James, the step-brother of Jesus. It
specifically says that he was the son of Joseph (by a prior marriage)
and the brother of Jeshua (which in English is rendered Jesus).

Then there is the written account of James in his Protevangelion.
Then there is the account of Josephus that James was the brother of Jesus.
Then there is Agapios' 10th century arabic version of Josephus which also
contains the passages referring to Jesus.

But none of these guys are white, which in your mind disqualifies them as
credible, eh? Okay, here's a list of white guys for you:

Tacitus:

"To stop the rumor, Nero substituted as culprits, and punished with the
utmost refinements of cruelty, a class of men, loathed for their vices,
whom the crowd styled Christians. They received their name from Christus,

who was executed by sentence of the procurator Pontius Pilate in the reign of Tiberius. That checked the pernicious superstition for a short time, but it broke out afresh, not only in Judea, where the plague first arose, but in the capital of Rome itself, where all horrible and shameful things in the world collect and find a home." (Tacitus, Annales 25.44)

Suetonius:

"He expelled the Jews from Rome, on account of the riots in which they were constantly indulging, at the instigation of Christus." (Suetonius, Lives of the Caesars: Claudius 25.4) which corroborates Acts 18:2.

> Does anyone know where i can get a antenna?

I have a BC210XL, the 18-channel desktop/mobile scanner in my car. I have the original factory antenna sitting right behind me. I don't have my glasses on, and all my taps and dies are in the basement. It looks to me that the thread on the bottom of the antenna is a 4-40; please correct me if I'm wrong. If you can't find a replacement antenna, the easiest course is to use a whip with a 90-degree Motorola and plug into the antenna on teh rearr of the 210. If you are trying to give your 210 the look of an unaltered original, you could probably make your own antenna.

Take a pair of TV rabbit ears. Cut off one of the ears at the bottom with a Dremel Moto-tool and solder a brass 4-40 screw to the inside of the antenna. Leave the thread sticking out far enough so that it can screw into the 210's PCB. That's it.

I have an owner's manual but no repair manual for my scanner.

7244. Atlanta frequencies??

Newsgroup: rec.radio.scanner
Date: 2002-12-30 06:13:42 UTC
From: please-nospam <nobody@home.com>
Message-ID: <quRP9.85815$hK4.6964867@bgtnsc05-news.ops.worldnet.att.net>
Source record: 39284

I have upgraded to a new scanner, and am in the process of loading it with the frequencies I want available for the Atlanta, GA area. Primarily, I'm interested in anything that would provide useful information in emergency situations, such as:

traffic helicoptors
power, gas, water, phone (service restoration)
police, fire, or EMT (coordination, not the routine dispatch)
HAZMAT
2meter ham radio repeaters

I have lists that cover some of the above, but many are old and out of date, some services have moved, and new ones have appeared that aren't on the lists. My scanner doesn't work with trunked services, so having those wouldn't be of immediate interest, although others may benefit from them.

In general, I'm not looking to monitor day-to-day operations, just a handfull of frequencies to turn to when bad weather, traffic accidents, or general mayham hits!

What it confirms is what Christian belief was -- not
necessarily historical event. You do understand the difference?

> Liar: it's the opinion of Josephus himself.

Perhaps you may have thought I said that it was a recital of
Josephus' belief but I did not. The *single paragraph* (not
much in the way of historical detail) that Josephus wrote
about Jesus appears to be his understanding of Christian
belief, not necessarily his personal belief.

>>>Josephus in his original used the past subjunctive
>>>when writing "He WAS the Messiah". Had this been a Christian belief, it
>>>would have been in the present indicative: "He IS the Messiah".
>>

> You're quite pathetic for not noticing something so obvious.

LOL. Methinks you're trying too hard. One of the points of
the 17th century critics was, in fact, that Josephus didn't
write the passage. Your point about the captilization is
relevant how?

> (Even if the monks who copied Josephus changed the capitalisation, that
> still doesn't meant that some monk inserted passages. In fact, changing
> capitalisation in many cases is sufficient to change the meaning, since
> a capital letter would signal the start of a new sentence. But, they

> policy, and not to your conspiracy theory. In order to save time, ink,
> space, or work, the copyists often omitted punctuation and spaces between
> words, which would enhance the effect of changing capitalisation.)

In the end, we're still left with a single paragraph that
offers nothing in detail. That, you cannot change. If
that's you're idea of proof, so be it. But it's not mine.
As far as I'm concerned, the question is still open.

Quite a few sellers want to make sure you actually have the card. If
the card was issued outside the USA, the normal ability to match up
the address doesn't exist, so to protect themselves, quite a few
merchants want to see photocopies of front and back of the card to
make sure you actually have it, as opposed to simply using the number.

The alternative is the card is simply refused. One of my Visa cards is
actually a debit card issued outside the USA. There are a number of
on-line merchants that won't accept that card, period.

> but it broke out afresh, not only in Judea, where the plague first arose,
> but in the capital of Rome itself, where all horrible and shameful things
> in the world collect and find a home." (Tacitus, Annales 25.44)

Actually, it's from the Annals 15.44 (115 A.D.). Below is
the version that I could find.

Consequently, to get rid of the report, Nero fastened the
guilt and inflicted the most exquisite tortures on a class
hated for their abominations, called Christians by the
populace. Christus, from whom the name had its origin,
suffered the extreme penalty during the reign of Tiberius at
the hands of one of our procurators, Pontius Pilatus, and a
most mischievous superstition, thus checked for the moment,
again broke out not only in Judaea, the first source of the
evil, but even in Rome, where all things hideous and
shameful from every part of the world find their centre and
become popular. Accordingly, an arrest was first made of all
who pleaded guilty; then, upon their information, an immense
multitude was convicted, not so much of the crime of firing
the city, as of hatred against mankind. Mockery of every
sort was added to their deaths. Covered with the skins of
beasts, they were torn by dogs and perished, or were nailed
to crosses, or were doomed to the flames and burnt, to serve
as a nightly illumination, when daylight had expired. Nero
offered his gardens for the spectacle, and was exhibiting a
show in the circus, while he mingled with the people in the
dress of a charioteer or stood aloft on a car. Hence, even
for criminals who deserved extreme and exemplary punishment,
there arose a feeling of compassion; for it was not, as it

seemed, for the public good, but to glut one man's cruelty,
that they were being destroyed.

It could be that Tacitus is simply repeating what was common
knowledge about Christians about the beginning of the 2d
century. The most likely source of Tacitus's information
about Christ is Tacitus's own dealings with Christians,
directly or indirectly. IOW, Tacitus provides no historical
record about the actual life of Jesus.

> Suetonius:
>
> "He expelled the Jews from Rome, on account of the riots in which they
> were constantly indulging, at the instigation of Christus." (Suetonius,
> Lives of the Caesars: Claudius 25.4) which corroborates Acts 18:2.

My translation says:

"As the Jews were making constant disturbances at the
instigation of Chrestus, he expelled them from Rome."

It is possible that the Jews were expelled from Rome for a
different cause. "Chrestus" is a suitable Greek name, so
there may have been an agitator by the name of Chrestus in
Rome. Or there may have been a different messianic pretender
in Rome. It is difficult to say.

Wait a minute! By definition, SWR is the ratio of the characteristic impedance of the transmission line divided by the load impedance. In the case of a 75 ohm cable feeding a 50 ohm antenna, SWR = 75/50 = 1.5

That is not "the theoretical BEST" as you suggest, but simply the correct answer.

> But all this is MOOT, because this is a SCANNER newsgroup,
> and we LISTEN to scanners, we DON'T transmit.

You were the one who suggested that RG-6 was only good for receiving. I was just pointing out why that was not true. BTW, I am a scanner listener and also a ham operator and I do transmit. I think the readers of this group are seriously interested in radio communications and I think want to know the facts, not just old wives tales.

What if someone got your credit card number, placed the order, and
swung by the house to pick it up off your front doorstep while you
were at work?

My guess is that you'd be screaming bloody murder when you got your
next credit card statement.

That number that they asked you to read back to them off the back of
your credit card is meant to prevent fraud.

Something's wrong with either your particular Bearcat 210 or your antenna.
20+ years experience with that radio is that it's so damn sensitive that
sometimes picking up faraway signals is the problem!

Dave,

I understand your reasoning but consider, not everyone has an empty household! Furthermore, I called the bank which issues my CC and spoke with their security dept. THEY (Bank of America)SAID to be VERY CAREFUL whom the information goes to. Their recommendation was: if it is a large company with whom I've done prior business it MIGHT be OK! Call your CC company and speak with their security dept., find out what they say!

Unfortunately that number like ALL our other so-called 'private' information is readily available to crooks wanting it. Sad but true! And I believe MOST people know this, though may not want to admit it. Did you know identity theft is the fastest growing crime in America!!!! It's a FACT. They can only steal your identity if that information which we think is so 'secure' with others was not readily available, but it IS available!

We can give people passwords, mothers maiden name, your favorite color, your pets name, numbers all day long and to the 100th power, but we will ALWAYS be insecure as long as there are liars, thieves and such! Think about it! It seems we Americans keep going further and further, faster and faster toward that brick wall thinking more numbers, security check points, alarms, police officers, cameras on the streets and the rest will 'protect' us. We even have our ALARMS *MONITORED* now ... it's ridiculous! Do you see all the BIG money spent on 'security' having given us a better community than say 50 years ago? I DON'T!

We need to recapture (and live by) 'ol fashion values!

Like I said to Bruno:
I think a lot of this REALLY is 'paranoid schizophrenia'. Personally, I'm not expecting God to bless America!

There are a LOT of other retailers which would appreciate your business without you having to FAX your personal information across America! Perhaps you'll consider just dealing with them.

(that's what I do ... no problem)

So why not just wait until q2 03 and combine the units?! We've waited this long....

I wonder if the new units will need a new APCO card or if the current one will work? Anyone going to CES that can ask????

I'll still get one of the "first" gen units - we have a 3600 digital system that I've been waiting to listen in on.

What about trunker? Anyone know if trunker can support the 96k control channels? If so then there's the ticket...

Not the current version. I have heard rumors of a Windows based version
of Trunker that will use a sound card input instead of a
dataslicer/serial port and that this version will support the 9600 baud
datastream, but nothing firm as of yet.

Itï¿½s no less secure than giving your credit card to a waiter or waitress at a restaurant. He/she will have your card for 5 minutes while out of your sight, who know what he/she is doing with your card. Could be copying down the number/exp. date/cvvs codeï¿½..

Since being in business on line Iï¿½ve seen many people scared about purchasing onLine with credit cards. However most people donï¿½t thing twice about giving their card to a total stranger at a restaurant who leaves for 5+ minutes. Most people donï¿½t think twice about faxing an order to a company and putting the credit card number on the faxed order blank. Just think if your fax arrived on the companies fax machine around quiting time. Now its laying in plain view over night and the cleaning crew as access to all your informationï¿½. They could literally clean you outï¿½.

I guess what Iï¿½m saying is that ANY TIME you use your credit card there is a risk however I think that risk is less of a risk when using your card over the internet verses out in the general public as the above examples show.

As far as faxing an image of the card I can see why the business is doing it. And I wouldnï¿½t feel too bad about doing it (even though I used the fax in my above example). At least your address is not going to be included in the same fax therefore a cleaning person would have a more difficult time using your card for fraud.

Hi ,

I don't know too much about scanners , but decide to spend the $150 for the scanner , found out that it burns thru batteries as they probobly all do , and bought an additional DC adapter , it is a bit complicated for someone that never had a scanner as myself , but by just reading and interpreting what you are reading , you will learn little by little how to use all the features of this radio , I live in Marilla N.Y. and easily pick up a 30 mile radius , no problem for me to hear all the action in Buffalo ... I am going to have to separate different channels with specific categories , such as police on one , fire on another , state police on another , etc. I just linked them all together , should have separated , and then listen to to them separately or all of them , also by using a text on the frequencies (numeric labeling) would help to know who you are listening too .. over all I think for $150 bucks , it's a steal , and all I,d ever need ... good luck , Larry B.

Just bought a Radio Shack pro 95 it,s a hand held model , seems to have a lot of features , Hoping some veterans might share some of their knowledge with me ..
1 >>> Firstly this radio can easily pick up 25 miles with a stock antenna , by getting one of those window mount antennas might I be able to get more distance ? also I don't see anywhere to hook up an extenal ,

2 >>> What exactly is trunk tracking , I have the capability to use them but don't seem that I need them , seem to pick up conversations just fine ..

3 >>> By reading the manual I see their are a number of modes , AM, FM, Mot, and EDR , also reading the manual I see I can set it up to receive (decode ??) EDACS .. Now this is getting a bit confusing , If I am starting out just monitoring , The police , fire , state police , sheriffs , and local municipalities services , should I be concerned on all of this , radio seems to work fine , did not do anything out of the ordinary , just programmed frequencies in my area , am I missing something ?

4 >>> Can,t seem to receive any transmission from any aircraft , or Ham operators when on that band ... any ideas ? Too far from the transmissions ?.. I know I typed a mouthfull , anybody giving me the time to respond , I thank you kindly for yor time and effort ... thanks again , Larry B. >>> Marilla N.Y.

Hi Larie

With the aerial the one you have now might detach and then in its place you connect an external aerial

I suggest you spend a few cents and run a google search on "scanning" and you will find loads of interesting links to keep you busy for a while. You may need to refine your search as sacaning can also bringing up other forms of scanning

Only in some states, and there are exceptions even in most or all of them, such as for ham radio licensees, people who obtain "permits" etc. MICHIGAN is notorious for being anti-scanner, with Indiana, Kentucky and, to an extent, Florida. West coast states - and their police - seem to be much more relaxed about it, as a general rule.. but it depends on the circumstances, like anywhere.

Here are a few good sites

7273. Unsolicited Review: PRO-95... get one!

Newsgroup: rec.radio.scanner
Date: 2002-12-30 20:56:32 UTC
From: me <me@none.com>
Message-ID: <4q2Q9.15910$oy5.656058@news2.west.cox.net>
Source record: 39214

Well I went out and got one. For $150, I couldn't resist...

I have a 2067 and wasn't all that impressed with it, so I figured this scanner would be the same story, but the more I use this unit the more I like it! The sensitivity is far superior to my aging 245, and the alpha tags make finding a particular tac channel in a hurry a breeze.

It takes some getting used to, and by all means if you get one, buy, borrow or build a cable and use the software written by Don Starr (excellent BTW) - your fingers and loved ones around you will thank you. The radio itself has a nice heft and solid feel to it, and it's got surprisingly good sound for a handheld. A quick test with earphones provided nice full sound in stereo, and I didn't need to turn the radio all the way up to hear it over traffic noise! (unlike the 245 I had).

What would I change? Well aside from the obvious wants: digital, LTR, pl decode, etc... I'd add/change 3 things:

1. 100 channels per bank? What a waste if you want to keep seperate trunked systems apart.. I'd love for someone at Uniden or GRE to come up with a way where the bank sizes could be configured independent of each other. i.e. Bank 1 is channels 1-29, bank 2 is 29 to 75, etc. I've heard that some AOR and ICOM radios do this, but I haven't seen it yet (besides, those are $pricy$ rigs compared to this one)

2. Backlit keypad. I can't help it - my 780 spoiled me here. I do lots of mobile scanning at night and I don't do braille.

3. Lockouts during trunked search. We still get GRE's all or none approach to trunked searching. Well, with new digital systems out there, it is a bit irritating to keep hearing that awful buzzsawing when I want to find new ID's. This is one area where Uniden really has it right, and I'd like to see the other vendors follow suit with this.

All in all I really like this radio. GRE really redeemed themselves here and the price just can't be beat. I oftentimes come onto this forum and read nothing but negative comments, so I figured I should take the initiative and speak up when I think a product is worth getting. The PRO-95 is just such a radio, folks. Factoring in the price, I give it a solid 9 out of 10.

Of course, this is just my opinion, your mileage may vary. I'm not affiliated with GRE or Tandy, just a happy camper with a neat new toy.

-me

With all due respect, the reason for the name of the group is to
define the subject to be discussed in the group. Do you see
religious fanatics in the name of any of these groups?
There are religion groups and that is where this should be discussed.

Soul of a thief and world view of a coward. Unspeakable filth! the
thousands dead in the wtc DID NOT DESERVE WHAT THEY GO DAMM YOU! Doh
the United States is not perfect so lets strip naked and beg those who would
kill us for mercy! After all it worked at DACHAU and BERGEN BELSEN did it
not? You are simply beyond hope! I Give you the words of Sam Adams:

"If ye love wealth better than liberty, the tranquility of servitude
better than the animating contest of freedom, go home from us in peace.
We ask not your counsel or arms, crouch down and lick the hands that
feed you. May your chains set lightly upon you. And may posterity
forget that ye were our countrymen."
-Samuel Adams

Arrggh! My mother gave me her BC210XLT yesterday. A couple of days
ago, I cut off the Motorola end of a shack closeout 75ohm cable that I
picked up a
while back, to make a cable tv hookup for a Casio pocket tv I got for
Christmas.

"I'll never need it." Garbage pickup was today.

I bought one and like it. It was easy to set up trunk scanning. It
is programmable with freeware -- and I was able to use a Yaesu cable I
already had (you know how good that feels).

I have it filled with NiMH batteries and leave it on a 9V wall wart
most of the time. I tested it and it ran for a long time on the
batteries alone -- 12 hours if I recall correctly.

I keep it on all day as I work. Not only can I listen to my radio
club's repeater, but I also instantly know about almost every health,
criminal, municipal and traffic incident in my county. It has made me
happy I am not doing that kind of work -- and thankful to the folks
who do.

>

That would depend on which state, and perhaps, which Federal Prison, too. I wouldn't be surprised if the Federal Prison system had no nation-wide compatibility.

As far as my State (California) goes, Statewide the prison system has 800MHz trunked systems. These are short range, 3 mile radius, systems. The Calif. prison transport system generally uses an 800 MHz conventional statewide repeater system when off-grounds transporting prisoners between institutions, courts, and hospitals, etc.

>
> My translation says:
>
> "As the Jews were making constant disturbances at the
> instigation of Chrestus, he expelled them from Rome."

Once again your translation is not from an Arab source, but a European one.
The Arabs certainly weren't pro-Jewish, and possbily had axes to grind,
so I could make the counter argument that it was they who watered down
Josephus' glowing account of Christ with a liberal dose of skepticism. But
not everyone can excel at hair-splitting, so I'll just accept the Arab
version as closer to what Josephus wrote than the European ones.

There are also references to Jesus visiting India during his 'lost' years
as documented by Raimundo Pannekar. Of course, these sources won't be
white enough for you either, so feel free to overlook them.

> It is possible that the Jews were expelled from Rome for a
> different cause. "Chrestus" is a suitable Greek name, so
> there may have been an agitator by the name of Chrestus in
> Rome. Or there may have been a different messianic pretender
> in Rome. It is difficult to say.

Just as the 'Pontius Pilatus' inscribed at the Roman Theatre ruins at
Caesarea is not the same Pontius Pilate of the New Testament or in the
writings of Josephus. For a mind as narrow as yours, complexity is
certainly a diseconomy of scale.

7291. GARMIN GPS with Family Radio Service

Newsgroup: rec.radio.scanner
Date: 2002-12-31 02:21:59 UTC
From: Emilio Golstein <egoldstein@sofa.net>
Message-ID: <PN2cnULv0ZqcYo2jXTWcpQ@aros.net>

I worked at a convention and I managed to get some radios that have a GPS built in:

http://www.garmin.com/products/rino/

I must say, I was impressed. Each radio transmits its GPS coordinates to the other radio.

I dropped one unit into the purse of a lady I was stalking, and I was able to use the GPS to follow her around all night long.
I even sent some fart sounds through the radio while she was in a movie.
Then someone came on and said hello.
I said "who's this?" The voice said "Detective Rogers." I said "up yours."

Apparently they were able to track my position for over an hour as I evaded capture.
Then I finally got wise and dumped my radio in a taxi and said "Up yours" to the taxi driver without paying.
So the taxi driver called the police, and they showed up at the same time Detective Rogers arrived and they all had some fun telling their stories about how good old me, "Captain Scanner" had struck again.

7293. GARMIN GPS with Family Radio Service

Newsgroup: rec.radio.scanner
Date: 2002-12-31 02:29:15 UTC
From: Emilio Golstein <egoldstein@sofa.net>
Message-ID: <hU6dnb5K7MApnYyjXTWcoQ@aros.net>
Source record: 39233
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I worked at a convention and I managed to get some radios that have a GPS built in:

http://www.garmin.com/products/rino/

I must say, I was impressed. Each radio transmits its GPS coordinates to the other radio.

I dropped one unit into the purse of a lady I was stalking, and I was able to use the GPS to follow her around all night long.
I even sent some fart sounds through the radio while she was in a movie.
Then someone came on and said hello.
I said "who's this?" The voice said "Detective Rogers." I said "up yours."

Apparently they were able to track my position for over an hour as I evaded capture.
Then I finally got wise and dumped my radio in a taxi and said "Up yours" to the taxi driver without paying.
So the taxi driver called the police, and they showed up at the same time Detective Rogers arrived and they all had some fun telling their stories about how good old me, "Captain Scanner" had struck again.

Hi ... Just bought the new icom r5 scanner
But as usually there is no software available to program it from my pc
At least not here in my country (the netherlands)
does anyone have that ? its called cs-r5
Maybe someone can send that to me ? or anyone knows where to download that
I can pay for that (if neccessary)

Please contact me at :

comsecnl@hotmail.com
or
icq: 107245466

Thanks

Ronald

Michigan is not as anti-scanner as you might think. If you're a law abiding citizen, with no serious criminal record, you can obtain a permit to have a police scanner in your car, with NO restrictions, for the asking...FREE, from the Michigan State Police.

It doesn't matter whether Jesus ever existed or not.

It is still widely accepted 'his' basic teachings are worthy of being incorporated in present-day social/political laws which attempt to govern unstable human behaviour. In the interests of life on Earth it is irrefutable that such laws must exist.

There are other teachings which have evolved over crudely the same epoch (20,000 years since the invention of writing) which differ little in their essentials.

There are some religions which have not withstood the test of time or their remnants have become merged with the others. And there will be future modifications to be included which cover such matters as cloning and use of the human organism. Evolution is nothing if it remains static.

At present the overwhelming concensus of world opinion is that messrs B*** and B**** must go. But it seems Viagra is here to stay.

The discontined Radio Shack Pro-2067 is a DIN E chassis size and will fit in dash of some cars. They are still around in small quantities. Your local 'Shack can tell how many are in the area even if they don't have one in stock themselves. Good radio - I own one, but do not use it mobile. Consider looking for the squelch modification on line; by many accounts this improves the mobile performance of the radio dramatically. Good luck!

That's true.. if the state police deem you "worthy." They were swell enough to even issue such permits to me, my wife and my 7-year-old son, which we requested "just in case." None of us has ever driven a mile in MI, and my wife and son have ever set foot within that fine state.

Here in California the police trust us with our scanners, without making us jump thru any such hoops.

hm

Hi Paul,

Actually, the Rampart frequency, 506.9375R (509.9375m) was never under the "KMA367" callsign, nor were any of the UHF frequencies, but have used KJC625 from the get-go in the early 1980s.

KMA367 was the callsign for the VHF mobile frequencies prior to that time, and the callsign actually still exists for a handful of mostly-little-used VHF freqs. Except for the "hot-shot/hailing" Tac 1 frequency on 154.83 (analog), which is used constantly. And is generally multicast on 484.7125 (digital).

The talk-out (dispatch) frequencies for the Metropolitan area were also licensed on KMA367, beginning in 1948. Those were the "A" frequency 159.15 (which included Rampart... yes the station is still there and in use, but badly overcrowded), and "B" on 158.91. Harbor, West LA & the San Fernando Valley dispatch frequencies used other callsigns (KMA787, -785, and -786, respectively)

The Motracs they used were always the trunk-mounted configuration, with just the head under the dash. In the late 60s, after Chief Parker died and his successor Tom Reddin gave the go-ahead for "tactical frequencies," they started using 4-channel Motracs with dual front ends, to accomodate receiving both 154/155 as well as 158/159 MHz frequencies. How narrow-banded those old radios were!

With the switch to the UHF "ROVER" system in 1980-82, the venerable Motracs got yet another life, as five of the former VHF dispatch frequency pairs were put to use for the MDT system, and they were STILL using Motracs until the new 800-mhz MDT system came online in the late 1990s.

I don't have a Motrac manual, but can probably come up with one somewhere.

Hope that helps...

7307. Grove Scanner Beam versus Antenna Warehouse Prices

Newsgroup: rec.radio.scanner
Date: 2002-12-31 06:12:11 UTC
From: luvindylan@sbcglobal.net
Message-ID: <38766638.0212302212.36cf5483@posting.google.com>
Source record: 39147

I am in the market for a good scanner antenna. After much research I have decided to go with the Grove Scanner Beam. I have read alot of posts within this and other user groups and have determined the Grove Antennas to be the best bet.

There have been numerous posts regarding the "inflated" prices charged by Grove and the distinct savings that could be had by purchasing "the same" antenna from Antenna Warehouse. The reality is that they are about the same price and for my money the reputation of Grove is unprecedented and would tilt my purchasing choice in their favor.

Antenna Warehouse advertises their Log Beam antenna for $56.00. This is their price on both Ebay and on their website. I inquired into the shipping of this antenna to California and Antenna Warehouse wanted close to $15.00 to ship to California. On the other hand, Grove's Scanner Beam is $74.95 with free shipping. If my math skills serve me right that makes there a $3.95 difference between the two antennas. No doubt, the people who post here that act as if there is a distinct savings between the two companies have never inquired into (or bothered to mention) the expense regarding the shipping charges by Antenna Warehouse.

Further, I would be willing to bet that the "improved" Grove Antenna is better built and of overall better quality than their "Ebay" competitor.

Sorry George - Glenn gets my vote hands down.

I have not had any problems with AES. I have purchased everything COD which gets me out of the credit card hassle. Costs a little extra but worth it. In fact I will not deal with ANY business or person not willing to work with the COD arrangement.

Considering the costs, I'd get the Grove if I had to choose between the two. But there's a lot to be said for omni-directional antennas for scanning. Unless all the signals you want to listen to are in the same general direction, you're going to miss things when scanning with a beam. The ideal setup would be to have both omni-directional and beam antennas. Do most of your scanning on the omni, and switch over to the beam to pull in the weak signals.

7312. Help w/BC895xlt

Newsgroup: rec.radio.scanner
Date: 2002-12-31 14:51:29 UTC
From: fishpond <fishpond@sbcglobal.net>
Message-ID: <R9iQ9.1380$Ye5.288741475@newssvr11.news.prodigy.com>
Source record: 39154

Just got a BC895XLT and have had no experience with truncking.

Kansas City has a GE/Ericsson System.

Manually entered 25 Freqs per list that came w/ scanner.

Using standard scan appears to work ok.

When I select trunk mode, it continually scans but
never stops at a transmission.

Also does not appear to find any IDs.

What am I doing wrong?

Thanks,

Carl

From: Jonathan & Shelley <gotch.javanet@rcn.com>
Message-ID: <ausbh4$m8o$1@bob.news.rcn.net>
Source record: 39153

Hi,
I got a great gift this year a Pro-92. It seems to be operating well and I am reading and learning much of this neat radio.

I have a question, My 92 came with scratches across the plexi-readout, and some, 4 gouges across the speaker and just under the RS Pro-92 name. It is kinda of like it was dropped or something. So? Would this affect my warranty? It looks like it already has been through alot, but the packing material was all mint. Yet the scratches make it look like it has had heavy use.

What should I do? Any suggestions?
Thanks in advance,

Jon

Oh Emilio/Captain Scanner/John Mackey where have you been hiding?

We had a couple of really super threads that could have benefited from your warped mind - one about Bush and another about Jesus. Can you have ever imagined that we'd be in such great and famous company? ;-)

As for who asked me, well no one did! That's why it's an unsolicited review. I bought one, liked it, thought I'd share the info. Why don't you get one too and tell us what YOU think? Then, if anyone asks you who asked, you can tell them that *I* did.

Or is posting on topic against the Emilio Manifesto?

I am looking to find the best scanner antenna for 25mHz - 1gHz. The attic is just over five feet from floor to peak. It will be used with a BC780XLT. Discones are ok, but no directional antennas. I want an OMNI-DIRECTIONAL antenna.

Which do you think is best?

TIA,
Vic

7326. Associated Press reporter in PA. looking for comment on new digital scanners

Newsgroup: rec.radio.scanner
Date: 2002-12-31 17:08:00 UTC
From: jstraziuso@yahoo.com
Message-ID: <31d851b.0212310908.3f958169@posting.google.com>

I'm an AP reporter in Philadelphia writing a story today about the new digital scanners Uniden is shipping, and the transition that police departments are making to digital.

I'm looking for a hobbyist who uses analog and is mad/happy about switch to digital and plans/doesn't plan to buy the new digital stuff.

If someone out there could give me a call as early as possible on 12/31/02 at 215-561-1133 I'm looking for someone to quote in a newspaper article. Thanks

Simply, put it back in the box and return it to RS purchase location for a refund/exchange. I can't tell you how many times I've seen evidence that I was buying used merchandise at RS even as they claimed it new. Heck, you might even be able to talk them into a PRO-95 for only a few bucks extra. Good luck.

I'm new to radio, but for what it's worth I use a Radio Shack 20-176 antenna in the attic. It seems to work great and was cheap ($20). I use a 50' length of CX-1318 and I am very pleased with the results. Everything in the 150Mhz range sounds absolutely crystal clear, and I even get a few 900Mhz phone calls on accident every now and then. I think the dog changes the scanner to listen in on those freqs. I change the channel immediately of course, and send him to his kennel.

I'd be curious to see how well a Ferret 9-Band omni stacks up to my $20 Radio Shack special. Radio-ware.com has them for $239. Looks like a real ass kicker. Although I'm able to get the Oconto county sheriff with no problem, and that's about 60-70 miles away (not crystal clear, but pretty good)

Folks:

Anyone smart on replacing the R1 internal NiCDs with NiMHs?

How about a good source for either of the above?

Thanks,

TDub

Exactly! I've got a Robyn dual bander with multicolored (yellow, green, red, blue, and white) channel light caps, and watching the multicolored channel light caps flash on and off is as cool as watching the flashing lights on a Christmas tree.

Source record: 39173

I like the alpha tags feature of the 2053 but it doesn't pick up military air frequencies. The 895XLT does. Go for the one with more frequency coverage - thats what scanning is all about.

dylan triola wrote:

>
> Sorry George - Glenn gets my vote hands down.

I just hope that Bob Grove doesn't screw you like he's screwed me in the past. BTW I think I only paid about $5.00 for shipping to get the AntennaWarehouse antenna to me here in Florida.

On a side note, I don't thing the "new" Scanner Beam that Grove sells is much different from the old one. If you look at the specs you'll see that the gain is EXACTLY the same. So you're spending an extra $20.00 but get no dB gain for the extra money. The only thing you might get is some more signal rejection to the side and rear, unless you have an interfering signal to the side or rear then this extra signal rejection really isn't worth anything other than you might not hear a signal that you really want to hear.....

But then Grove does tout the "improved to provide better directivity!" but gets no numbers to support his claims. But of course that has been overlooked by Grove's Shill Glenn.

Now I see that Grove has removed the older antenna and touts the improved directivity. I feel that there really was never a new antenna, same one with Grove hype to justify the higher price tag.

If anyone in the Florida area gets one of these new Grove ants please let me know. I'd love to invite you over and we can do a side by side compareson and see if there were really any changes. By guess is NOT.

George

Perhaps Jesus was one of the Raelin (?) clones - implanted in
Mary which would explain the concept of an immaculate conception.
Thats as good an explaination as any I have heard. Perhaps the
Greek Minotaur and other half-beast, half man creatures we hear
of were cloning experiments gone bad or just experiments in mixing
DNA. While we are grabbing for straws, lets really let the imagination
run. Perhaps there was evolution and biblical genesis. Primitive earth
evolved creatures were mixed with DNA of a superior race. That
would explain Adams rib being used to produce Eve. These
explainations are just as plausable as the religious theories. Its
just all in the interpretation. What the bible states, fits in
perfectly with these ideas. Religious belief systems are so
watered down that you could never find truth in them. Its like
the story that gets told from person to person and ends up
being something entirely different when it makes its way back
around.

You're probably talking about AM skip shooters. "I be unit 163 from the Maaaaaaaaaaaaaaagnolia State, from the Maaaaaaaaaaaaaaagnolia State, from the Maaaaaaaaaaaaaaagnolia State...".

They fire up the linear and talk to hear themselves talk. It probably gives them a feeling of power to think that somebody on the other side of the country is hearing all this, though actually communicating with anyone does not appear to figure into their plans.

For actual conversations, tune in the SSB signals, or wait until night when "the skip is out', and local people take to the air.

>I am looking to find the best scanner antenna for 25mHz - 1gHz. The attic is
>just over five feet from floor to peak. It will be used with a BC780XLT.

No antenna will effectively cover such a wide frequency range.
However, if most of your listening is VHF/UHF with some 800mhz trunked systems, I've had good results with the Radio Shack groundplane antenna #20-176. It's cheap at $19.99, and small at under 3 feet tall. My attic is larger than yours (13ft from peak to floor) and I was able to mount 8 of these 10 feet above the attic floor, way up in the rafters.
The antennas care connected to 3 Bearcat 780XLT's, a 2 Bearcat 895XLT's, a Bearcat 890XLT, a PRO-2006, and an AOR AR-5000+3.

Hope this helps.

- Craig

7339. Re: Help w/BC895xlt

Source record: 39180

Carl,
The BC895XLT is a first-generation trunk tracker, will not trunk GE/Ericcson systems. It will only do Motorola Type I, Type II, and Type I/II Hybrid systems on 800 & 900 mhz. In order to trunk the GE system, you will have to purchase another scanner, such as the BC780XLT or one of the Radio Shack models that have this capability.
Since you state that you just bought the '895, perhaps the dealer will allow you to exchange it for a BC780XLT, and pay the difference in price. Typical price for the BC780XLT is $349.95.
I own both scanners, and the BC780XLT is much more versatile. You can trunk multiple trunked systems at once, while the '895 can only trunk one system at a time. The '780 can also scan conventional frequencies while tracking one or more trunked system, while the '895 can only do one or the other.

Hope this helps, and let me know if you have any further questions.

Assuming this is a new PRO-92, I would bring it back to Radio Shack for an exchange. I would not keep something that is cosmetically damaged and possibly was abused. It may very well have been a returned item, and the store never bothered to do an inspection before reselling it.

Good luck.

7341. Pro 2042 doesn't pickup signal on specific frequency

Newsgroup: rec.radio.scanner
Date: 2002-12-31 23:31:06 UTC
From: Jeffrey Loomis <jloomis2k@hotmail.com>
Message-ID: <lKidnbzgwYHmto-jXTWcoA@comcast.com>
Source record: 39182

I have a Pro 2042 with an OPTO535 board installed. I just noticed today that the radio nevers detects a signal on 460.3750 (which is Fraser PD in SE Michigan). Regardless of whether I'm using the radio direct or via Prove 7.0 it will not receive a signal on that frequency while my other radios (each with there own attenna) will pickup the signal when Fraser PD is transmitting.

The Pro 2042 will pickup nearby frequencys such as 460.325 and 460.4, but not 460.375.

The band is set to NFM for this frequency on all my radios.

Any ideas? Have radio's been known to stop working on only specific frequencies
